ColumnBase Constructor

Initializes a new instance of the ColumnBase class with default settings.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public ColumnBase()
```

ColumnBase Properties

Serves as a base for classes that represent data columns.

The following tables list the members exposed by the ColumnBase type.

Public Constructors

	Name	Description
	ColumnBase	Initializes a new instance of the ColumnBase class with default settings.

Public Properties

	Name	Description
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property.
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property.
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property.
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property.
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property.
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code.
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency property.
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property.
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property.
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property.
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	ActualShowCriteriaInAutoFilterRow	
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property.
	ActualWidth	Gets the column's actual width. This is a dependency property.
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property.
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property.
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property.
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property.
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property.
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property.
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property.
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property.
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property.
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property.
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property.

© 2018 Developer Express Inc.

	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column.
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a dependency property.
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property.
	ColumnFilterMode	Gets or sets how column values are filtered.
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property.
	Commands	Provides access to column commands.
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property.
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column.
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property.
	FieldType	Gets the type of data displayed by the column.
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property.
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property.
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property.
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property.
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property.
	Header	Gets or sets the column header's contents. This is a dependency property.
	HeaderCaption	Gets the column header's caption. This is a dependency property.
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property.
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This

© 2018 Developer Express Inc.

		is a dependency property.
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property.
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property.
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property.
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code.
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property.
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property.
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property.
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property.
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property.

© 2018 Developer Express Inc.

	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property.
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property.
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property.
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	Gets or sets the column's minimum width. This is a dependency property.
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name.
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property.
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property.

© 2018 Developer Express Inc.

	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property.
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property.
	SortIndex	Gets the column's position among sorted columns.
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property.
	SortOrder	Gets or sets the column's sort order. This is a dependency property.
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property.
	Tag	Gets or sets the data associated with the column.
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property.
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property.
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property.
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property.
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property.
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property.
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property.
	Width	Gets or sets the column width. This is a dependency property.
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description

ActualAllowColumnFiltering Property

Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualAllowColumnFiltering As Boolean
```

C#

```
public bool ActualAllowColumnFiltering { get; }
```

Property Value

true, if an end-user can filter data using the column's filter dropdown; otherwise, **false**.

Remarks

If the column's AllowColumnFiltering property is set to 'Default', its availability in data filtering is specified by the grid's DataControlBase.AllowColumnFiltering property. In this instance, to determine whether an end-user can actually group data by this column, use the **ActualAllowColumnFiltering** property.

ActualAllowMoving Property

Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualAllowMoving As Boolean
```

C#

```
public bool ActualAllowMoving { get; }
```

Property Value

true if an end-user can move this column; otherwise, **false**.

Remarks

If the column's AllowMoving property is set to 'Default', its behavior is controlled by the grid's DataControlBase.AllowColumnMoving property. In this instance, to determine whether an end-user can actually move this column, use the **ActualAllowMoving** property.

ActualAllowResizing Property

Gets whether an end-user can resize this column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualAllowResizing As Boolean
```

C#

```
public bool ActualAllowResizing { get; }
```

Property Value

true if an end-user can resize this column; otherwise, **false**.

Remarks

If the column's AllowResizing property is set to 'Default', its behavior is controlled by the grid's GridControl.AllowResizing property. In this instance, to determine whether an end-user can actually resize this column, use the **ActualAllowResizing** property.

ActualAllowSorting Property

Gets whether an end-user can sort data by column values. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualAllowSorting As Boolean
```

C#

```
public bool ActualAllowSorting { get; }
```

Property Value

true if an end-user can sort data by the column's values; otherwise, **false**.

Remarks

If the column's AllowSorting property is set to 'Default', its behavior is controlled by the grid's DataControlBase.AllowSorting property. In this instance, to determine whether an end-user can actually sort data by the values of this column, use the **ActualAllowSorting** property.

ActualCellStyle Property

Gets the actual style applied to column cells. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualCellStyle As Style
```

C#

```
public Style ActualCellStyle { get; }
```

Property Value

A Windows.UI.Xaml.Style object that represents the actual style applied to column cells.

Remarks

The style applied to all data cells is specified by the DataControlBase.CellStyle property. Individual columns provide the CellStyle property that, if specified, overrides the style specified by the grid. This allows you to provide a custom appearance of their cells. The actual style applied to the column's cells is returned by the **ActualCellStyle** property.

ActualDataWidth Property

This member supports the internal infrastructure and is not intended to be used directly from your code.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualDataWidth As Double
```

C#

```
public Double ActualDataWidth { get; }
```

Property Value

See Also

ColumnBase Class
ColumnBase Members
DevExpress.UI.Xaml.Grid Namespace

ActualHeaderStyle Property

Gets or sets the actual style applied to a column header. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualHeaderStyle As Style
```

C#

```
public Style ActualHeaderStyle { get; }
```

Property Value

A Windows.UI.Xaml.Style object that contains style settings.

See Also

ColumnBase Class

ActualHeaderTemplateSelector Property

Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualHeaderTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ActualHeaderTemplateSelector { get; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

See Also

ColumnBase Members
DevExpress.UI.Xaml.Grid Namespace
HeaderTemplateSelector
HeaderTemplate

© 2018 Developer Express Inc.

ActualHeaderToolTipTemplate Property

Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ActualHeaderToolTipTemplate As DataTemplate
```

C#

```
public DataTemplate ActualHeaderToolTipTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of a column header's tooltip.

Remarks

Use the HeaderToolTip property to set the tooltip's text. Use the HeaderToolTipTemplate property to define a custom representation for an individual column's tooltip. Use the DataControlBase.ColumnHeaderToolTipTemplate property to specify a common tooltip template for all the columns in the Grid Control. The **ActualHeaderToolTipTemplate** property returns a column's current tooltip template.

ActualHeaderWidth Property

Gets the column header's actual width. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualHeaderWidth As Double
```

C#

```
public Double ActualHeaderWidth { get; }
```

Property Value

A System.Double value that is the column header's width, in pixels.

ActualTotalSummaryContentStyle Property

Gets the actual style of total summary items displayed within the column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualTotalSummaryContentStyle As Style
```

C#

```
public Style ActualTotalSummaryContentStyle { get; }
```

Property Value

The actual style of total summary items displayed within the column.

Remarks

The style applied to all total summary items displayed within the grid is specified by the DataControlBase.TotalSummaryContentStyle property. Individual columns provide the TotalSummaryContentStyle property that, if specified, overrides the style specified by the grid. This allows you to provide a custom appearance of total summaries displayed within individual columns. The actual style applied to the column's total summary items is returned by the **ActualTotalSummaryContentStyle** property.

Target Type: DevExpress.UI.Xaml.Grid.TotalSummaryControl

See Also

ColumnBase Class
ColumnBase Members
DevExpress.UI.Xaml.Grid Namespace
TotalSummaryContentStyle

© 2018 Developer Express Inc.

ActualWidth Property

Gets the column's actual width. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualWidth As Double
```

C#

```
public Double ActualWidth { get; }
```

Property Value

A System.Double value that is the column's width, in pixels.

Remarks

Column widths can be changed automatically, so that the total columns' width matches the grid's width. In this instance, changing the width of one column automatically changes the widths of other columns. This behavior is controlled by the grid's GridControl.AutoWidth property. To obtain the actual width of columns, use their **ActualWidth** property.

AllowAutoFilter Property

Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowAutoFilter As Boolean
```

C#

```
public bool AllowAutoFilter { get; set; }
```

Property Value

true to allow an end-user to filter data by the column's values using the automatic filtering row; otherwise, **false**.

Remarks

End-users can filter data on the fly by typing text directly into the automatic filter row. When an end-user types the text within this row, a filter condition is automatically created based upon the values entered and applied to the column.

The **AllowAutoFilter** property allows you to prevent an end-user from filtering data by the current column's values via the automatic filter row. To do this, set the **AllowAutoFilter** property to **false**. In this instance, the automatic filter row's cell that corresponds to the current column is disabled.

To show the automatic filter row, set the GridControl.ShowAutoFilterRow property to **true**.

To learn more, see Automatic Filter Row.

AllowColumnFiltering Property

Gets or sets whether an end-user can filter data by a column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowColumnFiltering As DefaultBoolean
```

C#

```
public DefaultBoolean AllowColumnFiltering { get; set; }
```

Property Value

A DefaultBoolean enumeration value that specifies whether an end-user can filter data by a column.

Remarks

End-users are allowed to filter data if the grid's DataControlBase.AllowColumnFiltering property is set to **true**. Individual columns provide the **AllowColumnFiltering** property, allowing the default behavior specified by the view to be overridden. Setting this property to 'True' or 'False' overrides the default behavior. This can be useful when it is required to prevent an end-user from invoking the filter dropdown of individual columns.

If the **AllowColumnFiltering** property is set to 'Default', the capability to filter data is controlled by the grid's DataControlBase.AllowColumnFiltering property. In this instance, to obtain whether an end-user can filter data by the current column, use the ActualAllowColumnFiltering property.

See Also

AllowEditing Property

Gets or sets whether end-users can edit column values. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowEditing As DefaultBoolean
```

C#

```
public DefaultBoolean AllowEditing { get; set; }
```

Property Value

A DefaultBoolean enumeration value that specifies whether an end-user can edit cell values.

Remarks

End-users are allowed to edit data if the grid's DataControlBase.AllowEditing property is set to **true** and the DataControlBase.NavigationStyle property is set to GridControlNavigationStyle.Cell. Individual columns provide the **AllowEditing** property, allowing the default behavior specified by the grid, to be overridden. Setting this property to 'True' or 'False' overrides the default behavior. This can be useful when it is required to prevent an end-user from changing values of individual columns.

If the **AllowEditing** property is set to 'Default', the ability to edit data is controlled by the grid.

AllowFocus Property

Gets or sets whether the column cells can be focused. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowFocus As Boolean
```

C#

```
public bool AllowFocus { get; set; }
```

Property Value

true to allow the column cells to be focused; otherwise, **false**.

AllowMoving Property

Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowMoving As DefaultBoolean
```

C#

```
public DefaultBoolean AllowMoving { get; set; }
```

Property Value

A DefaultBoolean enumeration value that specifies whether an end-user is allowed to move this column.

Remarks

End-users are allowed to reorder columns or move them to the Group Panel via drag-and-drop, if the grid's DataControlBase.AllowColumnMoving property is set to **true**. Individual columns provide the **AllowMoving** property, allowing the default behavior specified by the grid to be overridden. Setting the **AllowMoving** property to 'True' or 'False' overrides the default behavior. This can be useful when it is required to prevent individual columns from being moved by an end-user.

If the columns **AllowMoving** property is set to 'Default', the capability to move it via drag-and-drop is controlled by the grid's DataControlBase.AllowColumnMoving property. In this instance, to determine whether an end-user can actually move this column, use the ActualAllowMoving property.

AllowResizing Property

Gets or sets whether an end-user can resize this column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowResizing As DefaultBoolean
```

C#

```
public DefaultBoolean AllowResizing { get; set; }
```

Property Value

A DefaultBoolean enumeration value that specifies whether an end-user can resize this column.

Remarks

End-users are allowed to resize columns if the grid's GridControl.AllowResizing property is set to **true**. Individual columns provide the **AllowResizing** property, allowing the default behavior specified by the grid, to be overridden. Setting this property to 'True' or 'False' overrides the default behavior. This can be useful when it is required to prevent an end-user from resizing individual columns.

If the **AllowResizing** property is set to 'Default', the ability to resize columns is controlled by the grid's GridControl.AllowResizing property. In this instance, to obtain whether an end-user can resize a column, use the ActualAllowResizing property.

AllowSearchPanel Property

Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowSearchPanel As DefaultBoolean
```

C#

```
public DefaultBoolean AllowSearchPanel { get; set; }
```

Property Value

true to use the column's data when searching via the search panel; otherwise, **false**.

AllowSorting Property

Gets or sets whether an end-user can sort data by the column's values. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowSorting As DefaultBoolean
```

C#

```
public DefaultBoolean AllowSorting { get; set; }
```

Property Value

A DefaultBoolean enumeration value that specifies whether an end-user can sort data by the column's values.

Remarks

End-users are allowed to sort data if the grid's DataControlBase.AllowSorting property is set to **true**. Individual columns provide the **AllowSorting** property, allowing the default behavior specified by the grid, to be overridden. Setting this property to 'True' or 'False' overrides the default behavior. This can be useful when it is required to prevent an end-user from sorting data by values of specific columns.

If the **AllowSorting** property is set to 'Default', the ability to sort data is controlled by the grid's DataControlBase.AllowSorting property. In this instance, to obtain whether an end-user can sort data by the current column, use the ActualAllowSorting property.

AutoFilterCondition Property

Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AutoFilterCondition As AutoFilterCondition
```

C#

```
public AutoFilterCondition AutoFilterCondition { get; set; }
```

Property Value

An AutoFilterCondition enumeration value that specifies the type of the comparison operator.

See Also

ColumnBase Class
ColumnBase Members
DevExpress.UI.Xaml.Grid Namespace

AutoFilterCriteria Property

Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AutoFilterCriteria As Nullable(of ClauseType)
```

C#

```
public Nullable<ClauseType> AutoFilterCriteria { get; set; }
```

Property Value

A DevExpress.Data.Filtering.Helpers.ClauseType enumeration value that is the type of the filter criteria.

Remarks

Use the **AutoFilterCriteria** property to specify the filter criteria for the current column. To learn more, refer to Automatic Filter Row.

Note

The following DevExpress.Data.Filtering.Helpers.ClauseType types are supported:

- BeginsWith
- Contains
- DoesNotContain
- DoesNotEqual
- EndsWith
- Equals
- Greater
- GreaterOrEqual
- Less
- LessOrEqual
- Like
- NotLike

AutoFilterEditorStyle Property

Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AutoFilterEditorStyle As Style
```

C#

```
public Style AutoFilterEditorStyle { get; set; }
```

Property Value

A Windows.UI.Xaml.Style object.

See Also

AutoFilterValue Property

Gets or sets the value in the Auto Filter Row for this column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AutoFilterValue As Object
```

C#

```
public object AutoFilterValue { get; set; }
```

Property Value

An object that represents the column's value in the automatic filter row.

Remarks

The automatic filter row allows end-users to filter data on the fly, by typing text directly into the row. To do this in code, use the **AutoFilterValue** property. The type of the comparison operator used to create filter conditions for the current column is specified by the AutoFilterCondition property.

To learn more, see Automatic Filter Row.

CellStyle Property

Gets or sets the style of cells displayed within this column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property CellStyle As Style
```

C#

```
public Style CellStyle { get; set; }
```

Property Value

A Windows.UI.Xaml.Style object that represents the style of cells displayed within this column.

Remarks

The **CellStyle** property specifies the style that groups together properties, resources, and event handlers.

ColumnChooserHeaderCaption Property

Gets or sets the caption of the Column Chooser. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ColumnChooserHeaderCaption As Object
```

C#

```
public object ColumnChooserHeaderCaption { get; set; }
```

Property Value

An object that represents the caption shown at the top of the Column Chooser.

ColumnFilterMode Property

Gets or sets how column values are filtered.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ColumnFilterMode As ColumnFilterMode
```

C#

```
public ColumnFilterMode ColumnFilterMode { get; set; }
```

Property Value

A ColumnFilterMode enumeration value.

Remarks

The grid allows its data to be filtered by column values (edit values) or display text. To specify the required filter mode, use the **ColumnFilterMode** property.

To learn more, see Filtering and Searching.

ColumnPosition Property

This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ColumnPosition As ColumnPosition
```

C#

```
public ColumnPosition ColumnPosition { get; set; }
```

Property Value

The DevExpress.UI.Xaml.Grid.ColumnPosition enumeration value.

Commands Property

Provides access to column commands.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Commands As GridColumnCommands
```

C#

```
public GridColumnCommands Commands { get; }
```

Property Value

A GridColumnCommands object that provides a set of column commands.

Remarks

Grid columns have two built-in commands, allowing you to toggle the sort order and clear a column's filter.

CustomColumnFilterPopupTemplate Property

Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property CustomColumnFilterPopupTemplate As DataTemplate
```

C#

```
public DataTemplate CustomColumnFilterPopupTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of a custom column filter.

Remarks

You can provide a custom column filter dropdown via templates. Do the following:

- Set the column's FilterPopupMode property to FilterPopupMode.Custom.
- Create a template representing the required filter dropdown and assign it to the **CustomColumnFilterPopupTemplate** property.

DataControl Property

Gets the data-aware control which owns the column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property DataControl As DataControlBase
```

C#

```
public DataControlBase DataControl { get; }
```

Property Value

A DataControlBase descendant that represents the data-aware control to which the column belongs.

FieldName Property

Gets the name of the database field assigned to this column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overridable Public Property FieldName As String
```

C#

```
public virtual string FieldName { get; set; }
```

Property Value

A System.String value that specifies the name of a data field. The default is **String.Empty**.

See Also

ColumnBase Class

DataControlBase.ItemsSource

© 2018 Developer Express Inc.

FieldType Property

Gets the type of data displayed by the column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property FieldType As Type
```

C#

```
public Type FieldType { get; }
```

Property Value

The System.Type of data displayed by the column.

See Also

ColumnBase Class
ColumnBase Members
DevExpress.UI.Xaml.Grid Namespace
FieldName

© 2018 Developer Express Inc.

FilterPopupMode Property

Gets or sets the display mode of the column's filter dropdown. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property FilterPopupMode As FilterPopupMode
```

C#

```
public FilterPopupMode FilterPopupMode { get; set; }
```

Property Value

A FilterPopupMode enumeration value that specifies the display mode of the column's filter dropdown.

Remarks

The Filter Dropdown can be represented as a regular list of items (one item at a time can be selected), as a checked list (multiple items can be selected/checked simultaneously) or as a calendar (for date-time columns). By default, filter dropdowns of date-time columns are represented by the calendar, filter dropdowns of all other columns are represented by regular lists. To use a checked filter dropdown list for a column, set the column's **FilterPopupMode** property to FilterPopupMode.List.

If you don't want to use built-in filter dropdowns, you can provide your own filter dropdown via templates. In this instance, set the **FilterPopupMode** property to FilterPopupMode.Custom and assign the template to the CustomColumnFilterPopupTemplate.

To learn more, see Filter Dropdown.

FixedWidth Property

Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property FixedWidth As Boolean
```

C#

```
public bool FixedWidth { get; set; }
```

Property Value

true the column's width remains the same when the auto column width feature is enabled; otherwise, **false**. The default is **false**.

Remarks

Column widths can be changed automatically, so that the total columns' width matches the grid's width. In this instance, changing the width of one column automatically changes the widths of other columns. This behavior is controlled by the grid's GridControl.AutoWidth property.

To prevent the width of an individual column(s) from being changed when resizing other columns, you should set the **FixedWidth** property to **true**.

HasLeftSibling Property

Indicates whether the current column has a sibling column displayed to its left. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property HasLeftSibling As Boolean
```

C#

```
public bool HasLeftSibling { get; set; }
```

Property Value

true, if the column has a sibling column displayed to its left; otherwise, **false**.

Remarks

The HasRightSibling and **HasLeftSibling** properties indicate whether a column has sibling columns displayed to its left and right. For instance, these properties are used by the grid to determine whether it is required to paint a column header's left/right edge.

HasRightSibling Property

Indicates whether the current column has a sibling column displayed to its right. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property HasRightSibling As Boolean
```

C#

```
public bool HasRightSibling { get; set; }
```

Property Value

true, if the column has a sibling column displayed to its right; otherwise, **false**.

Remarks

The **HasRightSibling** and HasLeftSibling properties indicate whether a column has sibling columns displayed to its left and right. For instance, these properties are used by the grid to determine whether it is required to paint a column header's left/right edge.

HasTotalSummaries Property

Gets whether the column displays total summaries. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property HasTotalSummaries As Boolean
```

C#

```
public bool HasTotalSummaries { get; }
```

Property Value

true, if the column displays total summaries; otherwise, **false**.

Remarks

Total summary items are stored within the grid's GridControl.TotalSummary collection. To learn more, see Total Summary.

Header Property

Gets or sets the column header's contents. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Header As Object
```

C#

```
public object Header { get; set; }
```

Property Value

An object that represents the column header's contents.

Remarks

If the **Header** property isn't specified, the column header's caption is specified by the FieldName property. To obtain the column's actual caption, use the HeaderCaption property.

HeaderCaption Property

Gets the column header's caption. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property HeaderCaption As Object
```

C#

```
public object HeaderCaption { get; }
```

Property Value

An object that represents the column header's caption.

Remarks

To specify the column's caption displayed within its header, use the Header content property.

HeaderStyle Property

Gets or sets the style applied to a column header. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderStyle As Style
```

C#

```
public Style HeaderStyle { get; set; }
```

Property Value

A Windows.UI.Xaml.Style object that contains style settings.

See Also

HeaderTemplate Property

Gets or sets the template that defines the column header's presentation. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderTemplate As DataTemplate
```

C#

```
public DataTemplate HeaderTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the column header's presentation.

Remarks

The data context for the **HeaderTemplate** template is the HeaderCaption property's value.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4252.

This example demonstrates how to display an image within the 'Product Name' column's header.

C#

```
 (MainPage.xaml.cs)
using System.Collections.ObjectModel;
using Windows.UI.Xaml.Controls;
namespace HeaderImage {
    public sealed partial class MainPage : Page {
        public MainPage() {
            this.InitializeComponent();
            grid.ItemsSource = new ProductList();
        }
        public class Product {
            public string ProductName { get; set; }
            public string Country { get; set; }
            public string City { get; set; }
            public double UnitPrice { get; set; }
            public int Quantity { get; set; }
        }
        public class ProductList : ObservableCollection<Product> {
            public ProductList()
                : base() {
                Add(new Product() { ProductName = "Chang", Country = "UK", City = "Cowes", UnitPrice = 19,
                Add(new Product() { ProductName = "Gravad lax", Country = "Italy", City = "Reggio Emilia",
                Add(new Product() { ProductName = "Ravioli Angelo", Country = "Brazil", City = "Rio de Jar
                Add(new Product() { ProductName = "Tarte au sucre", Country = "Germany", City = "QUICK-Sto
                Add(new Product() { ProductName = "Steeleye Stout", Country = "USA", City = "Reggio Emilia
                Add(new Product() { ProductName = "Pavlova", Country = "Austria", City = "Graz", UnitPrice
                Add(new Product() { ProductName = "Longlife Tofu", Country = "USA", City = "Boise", UnitPr
                Add(new Product() { ProductName = "Alice Mutton", Country = "Mexico", City = "México D.F.",
                Add(new Product() { ProductName = "Alice Mutton", Country = "Canada", City = "Tsawwassen",
            }
        }
    }
}

HeaderTemplateSelector Property

Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector HeaderTemplateSelector { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

A template that defines the column header's presentation is specified by the HeaderTemplate property. If you have more than one template that can be used to render the column's header, you can implement custom logic to choose the required template. To do this, derive from the Windows.UI.Xaml.Controls.DataTemplateSelector class, implement the **SelectTemplateCore** method that returns a template which meets the required condition, and assign it to the **HeaderTemplateSelector** property.

If both the HeaderTemplate and **HeaderTemplateSelector** are specified, the column's header is rendered using the template returned by the template selector. If the template selector returns **null**, the template specified by the HeaderTemplate property is used.

HeaderToolTip Property

Gets or sets the column header tooltip. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderToolTip As Object
```

C#

```
public object HeaderToolTip { get; set; }
```

Property Value

An object that represents the column header tooltip.

Remarks

The tooltip is shown when the cursor hovers over the column header.

Specify the HeaderToolTipTemplate property to define a custom representation for an individual column's tooltip. Use the DataControlBase.ColumnHeaderToolTipTemplate property to specify a common tooltip template for all the columns in the Grid Control.

The following code sample shows how to add an image to a tooltip using the HeaderToolTipTemplate property:

Xaml

```
<Grid:GridTextColumn FieldName="ProductName">
    <Grid:GridTextColumn.HeaderToolTipTemplate>
        <DataTemplate>
            <StackPanel Orientation="Horizontal">
                <Image Source="icon.png" Margin="0,0,5,0"></Image>
                <TextBlock Text="{Binding Path=HeaderCaption}" />
            </StackPanel>
        </DataTemplate>
    </Grid:GridTextColumn.HeaderToolTipTemplate>
</Grid:GridTextColumn>
```

HeaderToolTipTemplate Property

Gets or sets the template that defines the tooltip's presentation. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderToolTipTemplate As DataTemplate
```

C#

```
public DataTemplate HeaderToolTipTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of a column header's tooltip.

Remarks

Use the HeaderToolTip property to set the tooltip's text. Use the **HeaderToolTipTemplate** property to define a custom representation for an individual column's tooltip. Use the DataControlBase.ColumnHeaderToolTipTemplate property to specify a common tooltip template for all the columns in the Grid Control. The ActualHeaderToolTipTemplate property returns a column's current tooltip template.

The following code sample shows how to add an image to a tooltip using the **HeaderToolTipTemplate** property:

Xaml

```
<Grid:GridTextColumn FieldName="ProductName">
    <Grid:GridTextColumn.HeaderToolTipTemplate>
        <DataTemplate>
            <StackPanel Orientation="Horizontal">
                <Image Source="icon.png" Margin="0,0,5,0"></Image>
                <TextBlock Text="{Binding Path=HeaderCaption}" />
            </StackPanel>
        </DataTemplate>
    </Grid:GridTextColumn.HeaderToolTipTemplate>
</Grid:GridTextColumn>
```

HorizontalContentAlignment Property

Gets or sets the horizontal alignment of the column contents. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property HorizontalContentAlignment As HorizontalAlignment
```

C#

```
public HorizontalAlignment HorizontalContentAlignment { get; set; }
```

Property Value

A Windows.UI.Xaml.HorizontalAlignment enumeration value.

HorizontalHeaderContentAlignment Property

Gets or sets the column header's content alignment. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property HorizontalHeaderContentAlignment As HorizontalAlignment
```

C#

```
public HorizontalAlignment HorizontalHeaderContentAlignment { get; set; }
```

Property Value

A Windows.UI.Xaml.HorizontalAlignment enumeration value that specifies the content's horizontal alignment.

ImmediateUpdateAutoFilter Property

Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ImmediateUpdateAutoFilter As Boolean
```

C#

```
public bool ImmediateUpdateAutoFilter { get; set; }
```

Property Value

true to enable immediate updates; otherwise, **false**.

Remarks

By default, when an end-user modifies the text within the auto filter row's cell, the filter condition for this column is immediately updated. To disable automatic updates, set the column's **ImmediateUpdateAutoFilter** property to **false**. In this instance, an end-user should press the Enter key or move focus to another cell to force the updates.

To learn more, see Automatic Filter Row.

ImmediateUpdateColumnFilter Property

Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ImmediateUpdateColumnFilter As Boolean
```

C#

```
public bool ImmediateUpdateColumnFilter { get; set; }
```

Property Value

true to enable automatic updates; otherwise, **false**.

Remarks

If the column's filter dropdown is represented as a regular list of items, only one item at a time can be selected. In this instance, selecting an item automatically updates the column's filter and closes the filter dropdown.

If the filter dropdown is represented as a checked list (multiple items can be checked/unchecked simultaneously) or by a custom template, use the **ImmediateUpdateColumnFilter** property to enable or disable automatic updates. If automatic updates are disabled, the filter is applied after the filter dropdown has been closed.

To learn more, see Filter Dropdown.

IsFirst Property

Gets whether the column is the first visible column displayed within a grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsFirst As Boolean
```

C#

```
public bool IsFirst { get; }
```

Property Value

true if the column is the first visible column displayed within a grid; otherwise, **false**.

IsLast Property

Gets whether the column is the last visible column displayed within a grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsLast As Boolean
```

C#

```
public bool IsLast { get; }
```

Property Value

true if the column is the last visible column displayed within a grid; otherwise, **false**.

IsSorted Property

Gets whether data is sorted by the values of this column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsSorted As Boolean
```

C#

```
public bool IsSorted { get; }
```

Property Value

true if data is sorted by the values of this column; otherwise, **false**.

© 2018 Developer Express Inc.

IsSortedBySummary Property

Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsSortedBySummary As Boolean
```

C#

```
public bool IsSortedBySummary { get; }
```

Property Value

true if group rows that correspond to this grouping column are sorted by group summary values; otherwise, **false**.

MaxWidth Property

Gets or sets the column's maximum width. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MaxWidth As Double
```

C#

```
public Double MaxWidth { get; set; }
```

Property Value

A double value that specifies the column's maximum width.

See Also

ColumnBase Class
ColumnBase Members
DevExpress.UI.Xaml.Grid Namespace

MinWidth Property

Gets or sets the column's minimum width. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MinWidth As Double
```

C#

```
public Double MinWidth { get; set; }
```

Property Value

A System.Double value that specifies the column's minimum width, in pixels.

Remarks

Column widths can be changed automatically, so that the total columns' width matches the grid's width. In this instance, changing the width of one column automatically changes the widths of other columns. This behavior is controlled by the grid's GridControl.AutoWidth property. Use the **MinWidth** property to specify the minimum width of the column.

Name Property

Gets or sets the column's name.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Name As String
```

C#

```
public string Name { get; set; }
```

Property Value

A System.String value that specifies the column's name.

Remarks

The **Name** property uniquely identifies a column, so that it can be accessed from code-behind or general code.

ShowCriteriaInAutoFilterRow Property

Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowCriteriaInAutoFilterRow As DefaultBoolean
```

C#

```
public DefaultBoolean ShowCriteriaInAutoFilterRow { get; set; }
```

Property Value

true, to display the criteria selector button in the automatic filter row; otherwise, **false**.

Remarks

Use the **ShowCriteriaInAutoFilterRow** property to control the availability of the filter criteria selector for a column.

The **filter criteria selector** allows end-users to apply the required criteria type to the current column.

Note
ShowCriteriaInAutoFilterRow property has higher precedence than GridControl.ShowCriteriaInAutoFilterRow.

ShowEmptyDateFilter Property

Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowEmptyDateFilter As Boolean
```

C#

```
public bool ShowEmptyDateFilter { get; set; }
```

Property Value

true if a corresponding filter is available; otherwise, **false**.

Remarks

The **ShowEmptyDateFilter** property is in effect for columns displaying date-time values.

ShowInColumnChooser Property

Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowInColumnChooser As Boolean
```

C#

```
public bool ShowInColumnChooser { get; set; }
```

Property Value

true, to display the column's header within the Column Chooser; otherwise, **false**.

ShowValidationAttributeErrors Property

Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowValidationAttributeErrors As DefaultBoolean
```

C#

```
public DefaultBoolean ShowValidationAttributeErrors { get; set; }
```

Property Value

A DefaultBoolean enumeration value that specifies whether or not error icons are displayed within column cells that fail validation.

Remarks

The Grid Control supports DataAnnotations attributes that specify data validation rules (to use data annotation attributes, reference the *System.ComponentModel.DataAnnotations* assembly).

By default, the Grid displays error icons within cells with invalid values. In this instance, if the DataControlBase.AllowCommitOnValidationAttributeError property is set to **false**, the cell focus cannot be moved to another cell until the cell's value is corrected.

To override the default behavior and hide errors, set the **ShowValidationAttributeErrors** property to **false**. If the **ShowValidationAttributeErrors** property is set to DefaultBoolean.Default, the visibility of error icons is specified by the Grid's DataControlBase.ShowValidationAttributeErrors property.

SortIndex Property

Gets the column's position among sorted columns.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SortIndex As Integer
```

C#

```
public int SortIndex { get; set; }
```

Property Value

An integer value that specifies the zero-based column's index among sorted columns. **-1** if data is not sorted by this column.

See Also

ColumnBase Class
ColumnBase Members
DevExpress.UI.Xaml.Grid Namespace
SortOrder

© 2018 Developer Express Inc.

SortMode Property

Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SortMode As ColumnSortMode
```

C#

```
public ColumnSortMode SortMode { get; set; }
```

Property Value

A ColumnSortMode enumeration value that specifies the sort mode. The default is **ColumnSortMode.Default**.

Remarks

The **SortMode** property specifies the algorithm used to sort the column's data (by display text, edit value or using a custom sorting algorithm).

To provide custom sorting, set the **SortMode** property to 'Custom' and handle the GridControl.CustomColumnSort event.

See Also

SortOrder Property

Gets or sets the column's sort order. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SortOrder As ColumnSortOrder
```

C#

```
public ColumnSortOrder SortOrder { get; set; }
```

Property Value

A ColumnSortOrder enumeration value that specifies the column's sort order.

Remarks

Any previous sorting is not cleared when changing the **SortOrder** property's value. The new sort order applies an additional sorting condition to the one previously applied.

To apply sorting, you can also use the GridControl.SortBy method.

TabStop Property

Gets or sets whether the column can be focused via the TAB key. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property TabStop As Boolean
```

C#

```
public bool TabStop { get; set; }
```

Property Value

true if the column can be focused via the TAB key; otherwise, **false**.

Remarks

If the **TabStop** property is set to **false**, the column's cells cannot be focused when navigating through cells via the TAB key. However, these cells can still be focused via the mouse or navigating through cells via the ARROW keys.

To prevent a column's cells from being focused, use the AllowFocus property.

Tag Property

Gets or sets the data associated with the column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Tag As Object
```

C#

```
public object Tag { get; set; }
```

Property Value

An object that contains information associated with the current column.

TotalSummaryContentStyle Property

Gets or sets the style of total summary items displayed within the column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property TotalSummaryContentStyle As Style
```

C#

```
public Style TotalSummaryContentStyle { get; set; }
```

Property Value

The style of total summary items displayed within the column.

Remarks

The style applied to all total summary items displayed within the grid is specified by the DataControlBase.TotalSummaryContentStyle property. Individual columns provide the **TotalSummaryContentStyle** property that, if specified, overrides the style specified by the grid. This allows you to provide a custom appearance of total summaries displayed within individual columns. The actual style applied to the column's total summary items is returned by the ActualTotalSummaryContentStyle property.

Target Type: DevExpress.UI.Xaml.Grid.TotalSummaryControl

See Also

TotalSummaryText Property

Gets the text displayed within the summary panel's cell. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property TotalSummaryText As String
```

C#

```
public string TotalSummaryText { get; }
```

Property Value

A string value that specifies the text displayed within the summary panel's cell.

Remarks

To show the Summary Panel, set the DataControlBase.ShowTotalSummary property to **true**. The **TotalSummaryText** property allows you to obtain the summary text displayed within the current column.

UnboundExpression Property

Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property UnboundExpression As String
```

C#

```
public string UnboundExpression { get; set; }
```

Property Value

A System.String that specifies an expression used to evaluate values for this column. The default is **String.Empty**.

Remarks

The Grid Control supports bound and unbound columns. Bound columns obtain their data from data fields in a grid's data source. Unbound columns are not bound to any field in the data source. These columns must be populated manually by handling the GridControl.CustomUnboundColumnData event or using the **UnboundExpression** property.

See Also

ColumnBase Class
ColumnBase Members
DevExpress.UI.Xaml.Grid Namespace
GridControl.CustomUnboundColumnData

© 2018 Developer Express Inc.

UnboundType Property

Gets or sets the data type and binding mode of the column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property UnboundType As UnboundColumnType
```

C#

```
public UnboundColumnType UnboundType { get; set; }
```

Property Value

A UnboundColumnType enumeration value that represents the data type and binding mode of the column. The default is **UnboundColumnType.Bound**.

Remarks

Unbound columns are not bound to any field in the data source. These columns must be populated manually by handling the GridControl.CustomUnboundColumnData event.

To make a column unbound, set its **UnboundType** property to a UnboundColumnType value that corresponds to the type of data the column will display. For example, if the column is supposed to display integer values, set the **UnboundType** property to UnboundColumnType.Integer. The data type specified by the **UnboundType** property, determines which editor should be used by default to edit the column's values.

If the column's **UnboundType** property is set to UnboundColumnType.Bound, it's assumed that this column is bound to a data field in the data source, specified by the column's FieldName property.

VerticalContentAlignment Property

Gets or sets the vertical alignment of the column contents. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property VerticalContentAlignment As VerticalAlignment
```

C#

```
public VerticalAlignment VerticalContentAlignment { get; set; }
```

Property Value

A Windows.UI.Xaml.VerticalAlignment enumeration value.

HorizontalContentAlignment

© 2018 Developer Express Inc.

Visible Property

Gets or sets whether the column is displayed within a grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Visible As Boolean
```

C#

```
public bool Visible { get; set; }
```

Property Value

true to display the column within a grid; otherwise, **false**.

Remarks

To hide the column, set its **Visible** property to **false**. To show a hidden column, set its **Visible** property to **true**. To show it at a specified position among visible columns, use its VisibleIndex property.

See Also

ColumnBase Class
ColumnBase Members
DevExpress.UI.Xaml.Grid Namespace

VisibleIndex Property

Gets or sets the column's position among visible columns. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property VisibleIndex As Integer
```

C#

```
public int VisibleIndex { get; set; }
```

Property Value

An integer value that specifies the column's position among visible columns.

Remarks

A column's visible order doesn't correspond to its position within the grid's GridControl.Columns collection. The column's visual position is specified by its **VisibleIndex** property. The column, whose **VisibleIndex** property value is set to **0** is leftmost within a grid, etc.

Note
The **VisibleIndex** of the hidden columns (i.e. columns whose Visible property is set to **false**) is **-1**.

Visible

© 2018 Developer Express Inc.

Width Property

Gets or sets the column width. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Width As Double
```

C#

```
public Double Width { get; set; }
```

Property Value

A System.Double value that specifies the column width, in pixels.

Remarks

If the automatic column width calculation is disabled , a column's width is specified by its **Width** property. If the total column width exceeds the grid width, a horizontal scrollbar is displayed, allowing an end-user to scroll grid columns.

Column widths can be changed automatically, so that the total column width matches the grid width. In this instance, changing the width of one column automatically changes the widths of other columns. This behavior is controlled by the grid's GridControl.AutoWidth property. To obtain the actual width of a column, use the ActualWidth property.

To specify the column's minimum width, use the MinWidth property.

ContentChanged Event

This member supports the internal infrastructure and is not intended to be used directly from your code.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public ContentChanged As ColumnContentChangedEventHandler
```

C#

```
public event ColumnContentChangedEventHandler ContentChanged
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Editors.ColumnContentChangedEventArgs containing data related to this event.

See Also

ColumnBase Class
ColumnBase Members
DevExpress.UI.Xaml.Grid Namespace

© 2018 Developer Express Inc.

PropertyChanged Event

Occurs each time any of the ColumnBase class properties has changed its value.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public PropertyChanged As PropertyChangedEventHandler
```

C#

```
public event PropertyChangedEventHandler PropertyChanged
```

Event Data

The event handler receives an argument of type System.ComponentModel.PropertyChangedEventArgs containing data related to this event.

The following **PropertyChangedEventArgs** properties provide information specific to this event.

Property	Description
PropertyName	

See Also

ColumnBase Class
ColumnBase Members
DevExpress.UI.Xaml.Grid Namespace

© 2018 Developer Express Inc.

Validate Event

Enables you to validate the active editor's value.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public Validate As GridCellValidationEventHandler
```

C#

```
public event GridCellValidationEventHandler Validate
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.Native.GridCellValidationEventArgs containing data related to this event.

Remarks

When an end-user modifies the focused cell's value and tries to save the changes (by pressing the ENTER key or moving focus to another cell), the grid validates a new value. First, this value is validated by the editor itself. Then, the column's **Validate** event is raised, allowing you to manually validate the cell's value. Note this event is not fired when changing cell values in code.

To learn more, see Editor Validation.

GetHeaderPresenterType Method

This member supports the internal infrastructure and is not intended to be used directly from your code.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
static Public Function GetHeaderPresenterType(
   ByVal element As DependencyObject
) As HeaderPresenterType
```

C#

```
public static HeaderPresenterType GetHeaderPresenterType(
   DependencyObject element
)
```

Parameters

element

Return Value

GetVisibleIndex Method

Gets the value of the VisibleIndex attached property for a specified Windows.UI.Xaml.DependencyObject.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic

```
static Public Function GetVisibleIndex(
   ByVal element As DependencyObject
) As Integer
```

C#

```
public static int GetVisibleIndex(
   DependencyObject element
)
```

Parameters
element
The element from which the property value is read.

Return Value

The VisibleIndex property value for the element.

ColumnCollection Class

Represents the grid's column collection.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class ColumnCollection Inherits ColumnCollectionBase(of ColumnBase)
```

C#

```
public class ColumnCollection : ColumnCollectionBase<ColumnBase>
```

Remarks

The grid stores its columns within the GridControl.Columns collection. The **ColumnCollection** class provides methods that can be used to add, delete, or access individual columns and perform other common collection management tasks. Individual columns are represented by ColumnBase descendants (GridTextColumn, GridCheckBoxColumn, etc.) and can be accessed by their field name or using indexed notation.

Inheritance Hierarchy

System.Object
  System.Collections.ObjectModel.Collection<DevExpress.UI.Xaml.Grid.ColumnBase>
    System.Collections.ObjectModel.ObservableCollection<DevExpress.UI.Xaml.Grid.ColumnBase>
      DevExpress.Core.ObservableCollectionCore<DevExpress.UI.Xaml.Grid.ColumnBase>
        DevExpress.UI.Xaml.Grid.ColumnCollectionBase<DevExpress.UI.Xaml.Grid.ColumnBase>
          ColumnCollection

ColumnCollection Constructor

Initializes a new instance of the ColumnCollection class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New(
   ByVal dataControl As DataControlBase
)
```
C#
```
public ColumnCollection(
   DataControlBase dataControl
)
```

Parameters
dataControl
The data control that owns the collection.

ColumnFilterMode Enumeration

Lists values that specify how column values are filtered.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Enum ColumnFilterMode
```

C#

```
public enum ColumnFilterMode
```

Members

Name	Description
DisplayText	Cell values are filtered by their display text.
Value	Cell values are filtered by their values.

Remarks

The values listed by this enumeration are used to set the ColumnBase.ColumnFilterMode property. To learn more, see Filtering and Searching.

CustomColumnSortEventArgs Class

Provides data for the GridControl.CustomColumnSort event.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class CustomColumnSortEventArgs Inherits EventArgs
```

C#

```
public class CustomColumnSortEventArgs : EventArgs
```

Remarks

To learn more, see Sorting Modes and Custom Sorting.

Inheritance Hierarchy

CustomColumnSortEventArgs Members

Provides data for the GridControl.CustomColumnSort event.

The following tables list the members exposed by the CustomColumnSortEventArgs type.

Public Constructors

	Name	Description
	CustomColumnSortEventArgs	Initializes a new instance of the CustomColumnSortEventArgs class.

Public Properties

	Name	Description
	Column	Gets the column whose values are being compared.
	Handled	Gets or sets whether a comparison operation is handled and no default processing is required.
	ListSourceRowIndex1	Gets the index of the first of the two rows being compared in the data source.
	ListSourceRowIndex2	Gets the index of the second of the two rows being compared in the data source.
	Result	Gets or sets the result of a custom comparison.
	SortOrder	Gets the sort order applied to the column.
	Source	Gets the grid control that raised the event.
	Value1	Gets the first value being compared.
	Value2	Gets the second value being compared.

Public Methods

	Name	Description
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Object**)
	GetHashCode	(Inherited from **System.Object**)
	GetType	(Inherited from **System.Object**)
S	ReferenceEquals	(Inherited from **System.Object**)
	ToString	(Inherited from **System.Object**)

Public Fields

CustomColumnSortEventArgs Constructor

Initializes a new instance of the CustomColumnSortEventArgs class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public New(
   ByVal column As GridColumnBase,
   ByVal listSourceRowIndex1 As Integer,
   ByVal listSourceRowIndex2 As Integer,
   ByVal value1 As Object,
   ByVal value2 As Object,
   ByVal sortOrder As ColumnSortOrder
)
```

C#

```
public CustomColumnSortEventArgs(
   GridColumnBase column,
   int listSourceRowIndex1,
   int listSourceRowIndex2,
   object value1,
   object value2,
   ColumnSortOrder sortOrder
)
```

Parameters

column
A GridColumnBase descendant that represents the column that contains the values to compare. This value is assigned to the Column property.
listSourceRowIndex1
An integer value that specifies the first row's index in the data source. This value is assigned to the ListSourceRowIndex1 property.
listSourceRowIndex2
An integer value that specifies the second row's index in the data source. This value is assigned to the ListSourceRowIndex2 property.
value1
An object that represents the first of the two values being compared. This value is assigned to the Value1 property.
value2
An object that represents the second of the two values being compared. This value is assigned to the Value2 property.
sortOrder
A ColumnSortOrder value that specifies the sort order applied to the specified column. This value is assigned to the SortOrder property.

Column Property

Gets the column whose values are being compared.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public ReadOnly Property Column As GridColumnBase
```
C#
```
public GridColumnBase Column { get; }
```

Property Value

A GridColumnBase descendant that represents the column that contains the values to compare.

See Also
CustomColumnSortEventArgs Class

DevExpress.UI.Xaml.Grid Namespace

© 2018 Developer Express Inc.

Handled Property

Gets or sets whether a comparison operation is handled and no default processing is required.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Handled As Boolean
```

C#

```
public bool Handled { get; set; }
```

Property Value

true if a comparison operation is handled; otherwise **false**.

Remarks

Set the **Handled** property to **true** to indicate that the current comparison operation is handled and no default processing is required.

If the **Handled** property is left set to **false**, the default comparison mechanism will be invoked after the GridControl.CustomColumnSort event handler is raised. This overrides the result of your comparison operation specified by the Result property.

ListSourceRowIndex1 Property

Gets the index of the first of the two rows being compared in the data source.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ListSourceRowIndex1 As Integer
```

C#

```
public int ListSourceRowIndex1 { get; }
```

Property Value

An integer value that specifies the first row's index in the data source.

Remarks

The **ListSourceRowIndex1** and ListSourceRowIndex2 properties allow you to identify records in the grid's data source. To obtain data objects that represent these records, and if required, their field values, use the methods provided by the data source.

The values currently being compared are returned by the Value1 and Value2 properties.

ListSourceRowIndex2 Property

Gets the index of the second of the two rows being compared in the data source.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ListSourceRowIndex2 As Integer
```

C#

```
public int ListSourceRowIndex2 { get; }
```

Property Value

An integer value that specifies the second row's index in the data source.

Remarks

The ListSourceRowIndex1 and **ListSourceRowIndex2** properties allow you to identify records in the grid's data source. To obtain data objects that represent these records, and if required, their field values, use the methods provided by the data source.

The values currently being compared are returned by the Value1 and Value2 properties.

Result Property

Gets or sets the result of a custom comparison.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Result As Integer
```

C#

```
public int Result { get; set; }
```

Property Value

An integer value that specifies the result.

Remarks

Use the **Result** property to set the result of the custom comparison of the two rows being processed. The compared values are returned by the Value1 and Value2 properties.

When handling the GridControl.CustomColumnSort event, the result must be set as follows:

- Set **Result** to **-1** if the first row should be positioned above the second row when data is sorted in ascending order. When data is sorted in descending order, the first row will be positioned below the second row.
- Set **Result** to **1** if the first row should be positioned below the second row when data is sorted in ascending order. When data is sorted in descending order, the first row will be positioned above the second row.
- Set **Result** to **0** to indicate that the rows are equal. In this case, the rows will be arranged within the grid according to their indices in a data source.

SortOrder Property

Gets the sort order applied to the column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property SortOrder As ColumnSortOrder
```

C#

```
public ColumnSortOrder SortOrder { get; }
```

Property Value

A ColumnSortOrder value that specifies the column's sort order.

Remarks

The **SortOrder** property indicates the sort order (ascending or descending) applied to the column. The column whose values are being compared is returned by the Column property.

To learn more, see Sorting Overview and Sorting Modes and Custom Sorting.

Source Property

Gets the grid control that raised the event.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Source As GridControl
```

C#

```
public GridControl Source { get; }
```

Property Value

A GridControl object that raised the event.

See Also

CustomColumnSortEventArgs Class

© 2018 Developer Express Inc.

Value1 Property

Gets the first value being compared.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Value1 As Object
```

C#

```
public object Value1 { get; }
```

Property Value

An object that represents the first of the two values being compared.

See Also

CustomColumnSortEventArgs Class

Value2 Property

Gets the second value being compared.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Value2 As Object
```

C#

```
public object Value2 { get; }
```

Property Value

An object that represents the second of the two values being compared.

CustomColumnSortEventHandler Delegate

Represents a method that will handle the GridControl.CustomColumnSort event.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Delegate Sub CustomColumnSortEventHandler(
   ByVal sender As Object,
   ByVal e As CustomColumnSortEventArgs
)
```

C#

```
public delegate void CustomColumnSortEventHandler(
   object sender,
   CustomColumnSortEventArgs e
)
```

Parameters

The declaration of your event handler must have the same parameters as the **CustomColumnSortEventHandler** delegate declaration.
sender
The event source.
e
A CustomColumnSortEventArgs object that contains event data.

DataControlBase Class

Serves as a base for classes that represents data-aware controls (e.g. GridControl).

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class DataControlBase Inherits DXControl, INotificationManager,
  INotifyPropertyChanged,
  IColumnOwnerBase,
  IConvertClonePropertyValue,
  ISupportSaveLoadControlState,
  IRowsPanelOwner
```

C#

```
public abstract class DataControlBase : DXControl, INotificationManager,
  INotifyPropertyChanged,
  IColumnOwnerBase,
  IConvertClonePropertyValue,
  ISupportSaveLoadControlState,
  IRowsPanelOwner
```

DataControlBase Members

Serves as a base for classes that represents data-aware controls (e.g. GridControl).

The following tables list the members exposed by the DataControlBase type.

Public Properties

	Name	Description
	ActiveEditor	Gets the active editor. This is a dependency property.
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowFilterPanel	Gets whether the filter panel is displayed within a grid. This is a dependency property.
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by column. This is a dependency property.
	AllowColumnMoving	Gets or sets whether an end-user is allowed to move columns by dragging their headers. This is a dependency property.
	AllowCommitOnValidationAttributeError	Gets or sets whether or not a cell's value that has failed validation specified by the Data Annotations attribute(s), can be posted to a data source. This is a dependency property.
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users are allowed to change cell values. This is a dependency property.
	AllowLeaveInvalidEditor	Gets or sets whether an editor that did not pass validation can lose focus. This is a dependency property.
	AllowSorting	Gets or sets whether an end-user can sort data. This is a dependency property.

© 2018 Developer Express Inc.

	AutoGenerateColumns	Gets or sets whether columns should be created automatically for all fields in a data source. This is a dependency property.
	AutoScrollOnSorting	Gets or sets whether a grid is automatically scrolled after the order of rows has been changed. This is a dependency property.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BottomAdditionalRowsCount	
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style applied to data cells displayed within a grid. This is a dependency property.
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnHeaderStyle	Gets or sets the column header's style. This is a dependency property.
	ColumnHeaderTemplate	Gets or sets the template that defines the presentation of column header content. This is a dependency property.
	ColumnHeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property.
	ColumnHeaderToolTipTemplate	Gets or sets the template that defines the presentation of a column header's tooltip. This is a dependency property.
	Commands	Provides access to grid commands. This is a dependency property.
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CurrentGrid	Gets or sets the data control currently used within a grid. This is a dependency property.
	CurrentItem	Gets or sets the currently focused data row.
	CurrentViewChangedListener	This member supports the internal infrastructure and cannot be used directly from your code. This is a dependency property.
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FilterCriteria	Gets or sets the grid's filter criteria. This is a dependency property.
	FilterPanelText	Gets the text displayed within the Filter Panel. This is a dependency property.
	FilterString	Gets or sets the grid's filter expression. This is a dependency property.
	FixedSummariesLeft	Gets total summaries displayed within the Fixed Summary Panel and aligned to the left.
	FixedSummariesRight	Gets total summaries displayed within the Fixed Summary Panel and aligned to the right.
	FixedTotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property.
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusedBorderTemplate	Gets or sets the template that defines the presentation of a focused row's border. This is a dependency property.
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HasValidationError	Gets whether a validation error has been defined for the grid. This is a dependency property.
	HeadersData	Gets the information about column headers.
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IncrementalLoadingThreshold	Gets or sets the threshold range that governs when the grid will begin to prefetch more row items. This is a dependency property.

© 2018 Developer Express Inc.

	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEditing	Gets whether the focused cell is currently being edited. This is a dependency property.
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsFilterEnabled	Gets or sets whether the current filter is enabled. This is a dependency property.
	IsFocused	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsKeyboardFocusWithin	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsLoaded	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsMouseOver	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSynchronizedWithCurrentItem	Gets or sets whether a grid should keep the SelectedItem synchronized with the current item in the Windows.UI.Xaml.Data.ICollectionView. This is a dependency property.
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

© 2018 Developer Express Inc.

		)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemClickCommand	Gets or sets the command to invoke when an item is clicked.
	ItemNavigationMode	Gets or sets whether a single or double tap is needed to navigate to an item.
	ItemNavigationTargetParameterBinding	Gets or sets a binding that defines a parameter to be passed to the target page, invoked when clicking an item.
	ItemNavigationTargetType	Allows you to specify a page to be opened when an end-user clicks an item.
	ItemsSource	Gets or sets the grid's data source. This is a dependency property.
	KeepFocusedRowOnUpdate	Gets or sets whether the currently selected row retains focus when data is sorted, grouped or filtered.
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	NavigationStyle	Gets or sets whether row focusing is allowed. This is a dependency property.
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Padding	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	PaddingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PreserveSorting	Gets or sets whether clicking a column header clears the existing sort settings. This is a dependency property.
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	SearchColumns	Gets or sets the field names against which searches are performed by the Search Panel. This is a dependency property.
	SearchDelay	Gets or sets the amount of time in milliseconds, after which a data search is initiated (in an automatic find mode). This is a dependency property.
	SearchPanelAllowFilter	Gets or sets whether the grid displays only those records that match the search criteria. This is a dependency property.
	SearchPanelClearOnClose	Gets or sets whether or not the search string is cleared when closing the Search Panel. This is a dependency property.
	SearchPanelCloseDelay	Gets or sets the amount of time, in milliseconds, after which a Search Panel that doesn't contain any search criteria is closed. This is a dependency property.
	SearchPanelCriteriaOperatorType	Gets or sets the logical operator type (AND or OR). This is a dependency property.
	SearchPanelFindFilter	Gets or sets the type of the comparison operator used to create filter conditions. This is a dependency property.
	SearchPanelFindMode	Gets or sets whether data searching starts automatically, or must be started manually. This is a dependency property.
	SearchPanelHighlightingSettings	Gets or sets the font settings used to highlight the text that matches the search criteria. This is a dependency property.
	SearchPanelHighlightResults	Gets or sets whether to highlight search results within located records. This is a dependency property.
	SearchString	Gets or sets the search string specified within the Search Panel. This is a dependency property.

© 2018 Developer Express Inc.

	SelectedItem	Get or sets the currently focused data item.
	SelectedItemHandle	Gets or sets the selected item's handle. This is a dependency property.
	SelectedItems	Gets data objects that correspond to items currently selected within a grid.
	SelectionMode	Gets or sets whether multiple row/cell selection is enabled. This is a dependency property.
	ShowColumnHeaders	Gets or sets whether a grid displays column headers. This is a dependency property.
	ShowFilterPanelMode	Gets or sets when the Filter Panel is displayed within a grid. This is a dependency property.
	ShowFixedTotalSummary	Gets or sets whether or not the Fixed Summary Panel is displayed within the grid. This is a dependency property.
	ShowSearchPanelMode	Gets or sets when the Search Panel is shown within the grid. This is a dependency property.
	ShowTotalSummary	Gets or sets whether to display the total summary panel.
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property.
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	SummariesIgnoreNullValues	Gets or sets whether null values must be ignored when calculating data summaries. This is a dependency property.
	TabIndex	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabIndexProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigation	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabNavigationProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	Tag	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Template	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TotalSummaryContentStyle	Gets or sets the style applied to total summary items displayed within a View. This is a dependency property.
	TotalSummaryData	Gets information about the total summary.
	TotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property.
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseSystemFocusVisuals	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	UseSystemFocusVisualsProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ValidationError	Provides access to the object, which contains information about the validation error. This is a dependency property.
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VerticalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VirtualizingCacheHeight	Gets or sets the height of buffer areas above and below the visible area of the grid to be rendered.
	VirtualizingCacheWidth	Gets or sets the width of buffer areas above and below the visible area of the grid to be rendered. This is a dependency property.
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibleRowCount	Gets the total number of rows displayed within the grid.
	Width	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description
	AddHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	ApplyTemplate	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	BeginDataUpdate	Prevents visual and internal data updates until the EndDataUpdate method is called.
	BeginInit	Starts the control's runtime initialization.
	BeginSelection	Prevents selection updates until the EndSelection method is called.
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	CapturePointer	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClearColumnFilter	Overloaded. Removes the filter condition applied to the specified column.
	ClearSorting	Clears the sorting applied to the grid.
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CollapseAllGroups	Collapses all group rows.
	CommitEditing	Hides the active editor and posts all the changes made within the focused row to a data source if the row values are valid.
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	EndDataUpdate	Enables visual and internal data updates after the BeginDataUpdate method call, and updates the grid.
	EndInit	Ends the runtime initialization.
	EndSelection	Enables selection updates after calling the BeginSelection method, and forces an immediate update.
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	ExpandAllGroups	Expands all group rows.
	FindName	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Focus	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetBindingExpression	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GetCellElementByRowHandleAndColumn	Returns the specified cell's UI element.
	GetCellElementByTreeElement	Returns a cell that contains the specified tree element.
	GetCellValue	Returns the value of the specified data cell.
	GetColumnByTreeElement	Returns a column whose cell contains the specified tree element.

© 2018 Developer Express Inc.

	GetColumnFilterCriteria	Overloaded. Returns a filter applied to the specified column.
	GetColumnFilterString	Overloaded. Returns a filter expression applied to the specified column.
S	GetCurrentGrid	Gets the value of the CurrentGrid attached property for a specified Windows.UI.Xaml.DependencyObject.
S	GetCurrentViewChangedListener	Gets the value of the CurrentViewChangedListener attached property for a specified Windows.UI.Xaml.DependencyObject.
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	GetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetRowElementByRowHandle	Returns a UI element that is the specified row.
	GetRowState	This member supports the internal infrastructure and is not intended to be used directly from your code.
	GetSelectedCells	Returns the selected data cells.
	GetTotalSummaryValue	Returns the value of the specified total summary item.
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	HideEditor	Closes the active editor, discarding all the changes made.
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	InvalidateArrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidateMeasure	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsCellSelected	Indicates whether the specified cell is selected.
	IsItemSelected	Indicates whether the specified item is selected.
	LockFocus	(Inherited from **DevExpress.Core.Native.DXControl**)

© 2018 Developer Express Inc.

	Measure	(Inherited from **Windows.UI.Xaml.UIElement**)
	MergeColumnFilters	Overloaded. Combines the specified filter with the grid's current filter with the AND operator.
	MoveColumnTo	Moves the specified column to the specified position.
	MoveFirstRow	Moves focus to the first visible row within a grid.
	MoveLastRow	Moves focus to the last visible row within a grid.
	MoveNextPage	Moves focus forward to the bottom row displayed onscreen within a grid.
	MoveNextRow	Moves focus to the row following the one currently focused.
	MovePrevPage	Moves focus backward to the top row displayed onscreen within a grid.
	MovePrevRow	
	MoveSelectedItem	Selects the specified item.
	PopulateColumns	Creates columns for all fields in a bound data source.
	PostEditor	Saves the active editor's value to a data source without closing the editor.
	RaiseEvent	(Inherited from **DevExpress.Core.Native.DXControl**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RefreshData	Updates the control data.
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReleasePointerCapture	(Inherited from **Windows.UI.Xaml.UIElement**)
	ReleasePointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	RemoveHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	ScrollIntoView	Overloaded. Makes the specified row visible onscreen.
	SelectAll	Selects all items within a grid.
	SelectCell	Selects the cell.

© 2018 Developer Express Inc.

	SelectCells	Selects multiple cells.
	SelectItem	Overloaded. Selects the specified item.
	SelectRange	Selects multiple items, while preserving the current selection (if any).
	SetBinding	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	SetCurrentGrid	Sets the value of the CurrentGrid attached property to a specified Windows.UI.Xaml.DependencyObject.
S	SetCurrentViewChangedListener	Sets the value of the CurrentViewChangedListener attached property to a specified Windows.UI.Xaml.DependencyObject.
S	SetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ShowEditor	Activates the focused cell's inplace editor.
	SortBy	Sorts data by the values of the specified column.
	StartDragAsync	(Inherited from **Windows.UI.Xaml.UIElement**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	TransformToVisual	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TryStartDirectManipulation	(Inherited from **Windows.UI.Xaml.UIElement**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	UnselectAll	Unselects any selected items within a grid.
	UnselectCell	Unselects the specified cell.
	UnselectCells	Unselects the specified cells.
	UnselectItem	Overloaded. Unselects the specified item.
	UpdateLayout	(Inherited from **Windows.UI.Xaml.UIElement**)
	UpdateTotalSummary	Updates total summaries.

© 2018 Developer Express Inc.

	UpdateUnboundColumnValues	Updates unbound column values in the specified row.

Public Fields

	Name	Description
	ActiveEditorProperty	Identifies the ActiveEditor dependency property.
	ActualShowFilterPanelProperty	Identifies the ActualShowFilterPanel dependency property.
	AllowColumnFilteringProperty	Identifies the AllowColumnFiltering dependency property.
	AllowColumnMovingProperty	Identifies the AllowColumnMoving dependency property.
	AllowCommitOnValidationAttributeErrorProperty	Identifies the AllowCommitOnValidationAttributeError dependency property.
	AllowEditingProperty	Identifies the AllowEditing dependency property.
	AllowLeaveInvalidEditorProperty	Identifies the AllowLeaveInvalidEditor dependency property.
	AllowSortingProperty	Identifies the AllowSorting dependency property.
	AutoGenerateColumnsProperty	Identifies the AutoGenerateColumns dependency property.
	AutoScrollOnSortingProperty	Identifies the AutoScrollOnSorting dependency property.
	CellStyleProperty	Identifies the CellStyle dependency property.
	ColumnHeaderStyleProperty	Identifies the ColumnHeaderStyle dependency property.
	ColumnHeaderTemplateProperty	Identifies the ColumnHeaderTemplate dependency property.
	ColumnHeaderTemplateSelectorProperty	Identifies the ColumnHeaderTemplateSelector dependency property.
	ColumnHeaderToolTipTemplateProperty	Identifies the ColumnHeaderToolTipTemplate dependency property.
	CommandsProperty	Identifies the Commands dependency property.
	CurrentGridProperty	Identifies the CurrentGrid dependency property.
	CurrentItemProperty	Identifies the CurrentItem dependency property.
	CurrentViewChangedListenerProperty	Identifies the CurrentViewChangedListener

© 2018 Developer Express Inc.

		dependency property.
S	FilterCriteriaProperty	Identifies the FilterCriteria dependency property.
S	FilterPanelTextProperty	Identifies the FilterPanelText dependency property.
S	FilterStringProperty	Identifies the FilterString dependency property.
S	FixedTotalSummaryItemTemplateProperty	Identifies the FixedTotalSummaryItemTemplate dependency property.
S	FocusedBorderTemplateProperty	Identifies the FocusedBorderTemplate dependency property.
S	FocusVisualStyleProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	HasValidationErrorProperty	Identifies the HasValidationError dependency property.
S	IncrementalLoadingThresholdProperty	Identifies the IncrementalLoadingThreshold dependency property.
S	InvalidRowHandle	Gets the handle of a row which does not exist in a grid.
S	IsEditingProperty	Identifies the IsEditing dependency property.
S	IsFilterEnabledProperty	Identifies the IsFilterEnabled dependency property.
S	IsKeyboardFocusWithinProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	IsLoadedProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	IsSynchronizedWithCurrentItemProperty	Identifies the IsSynchronizedWithCurrentItem dependency property.
S	ItemClickCommandProperty	Identifies the ItemClickCommand dependency property.
S	ItemNavigationModeProperty	Identifies the ItemNavigationMode dependency property.
S	ItemNavigationTargetTypeProperty	Identifies the ItemNavigationTargetType dependency property.
S	ItemsSourceProperty	Identifies the ItemsSource dependency property.
S	KeepFocusedRowOnUpdateProperty	Identifies the KeepFocusedRowOnUpdate dependency property.

© 2018 Developer Express Inc.

	NavigationStyleProperty	Identifies the NavigationStyle dependency property.
	PreserveSortingProperty	Identifies the PreserveSorting dependency property.
	SearchColumnsProperty	Identifies the SearchColumns dependency property.
	SearchDelayProperty	Identifies the SearchDelay dependency property.
	SearchPanelAllowFilterProperty	Identifies the SearchPanelAllowFilter dependency property.
	SearchPanelClearOnCloseProperty	Identifies the SearchPanelClearOnClose dependency property.
	SearchPanelCloseDelayProperty	Identifies the SearchPanelCloseDelay dependency property.
	SearchPanelCriteriaOperatorTypeProperty	Identifies the SearchPanelCriteriaOperatorType dependency property.
	SearchPanelFindFilterProperty	Identifies the SearchPanelFindFilter dependency property.
	SearchPanelFindModeProperty	Identifies the SearchPanelFindMode dependency property.
	SearchPanelHighlightingSettingsProperty	Identifies the SearchPanelHighlightingSettings dependency property.
	SearchPanelHighlightResultsProperty	Identifies the SearchPanelHighlightResults dependency property.
	SearchStringProperty	Identifies the SearchString dependency property.
	SelectedItemHandleProperty	Identifies the SelectedItemHandle dependency property.
	SelectedItemProperty	Identifies the SelectedItem dependency property.
	SelectedItemsProperty	Identifies the SelectedItems dependency property.
	SelectionModeProperty	Identifies the SelectionMode dependency property.
	ShowColumnHeadersProperty	Identifies the ShowColumnHeaders dependency property.
	ShowFilterPanelModeProperty	Identifies the ShowFilterPanelMode dependency property.
	ShowFixedTotalSummaryProperty	Identifies the ShowFixedTotalSummary dependency property.
	ShowSearchPanelModeProperty	Identifies the ShowSearchPanelMode dependency property.

© 2018 Developer Express Inc.

	ShowTotalSummaryProperty	Identifies the ShowTotalSummary dependency property.
	ShowValidationAttributeErrorsProperty	Identifies the ShowValidationAttributeErrors dependency property.
	SummariesIgnoreNullValuesProperty	Identifies the SummariesIgnoreNullValues dependency property.
	TotalSummaryContentStyleProperty	Identifies the TotalSummaryContentStyle dependency property.
	TotalSummaryItemTemplateProperty	Identifies the TotalSummaryItemTemplate dependency property.
	ValidationErrorProperty	Identifies the ValidationError dependency property.
	VirtualizingCacheHeightProperty	Identifies the VirtualizingCacheHeight dependency property.
	VirtualizingCacheWidthProperty	Identifies the VirtualizingCacheWidth dependency property.

Public Events

	Name	Description
	AutoGeneratedColumns	Occurs after the columns have been automatically generated.
	AutoGeneratingColumn	Occurs each time an individual column is auto-generated.
	BeforeLayoutRefresh	Enables you to lock down end-user capabilities that affect the onscreen position of the focused row (e.g. moving row focus, row scrolling, sorting, etc.).
	ColumnsPopulated	Obsolete. Occurs after the columns have been automatically generated.
	CurrentColumnChanged	Occurs after the focused column has been changed.
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	Drop	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	FilterChanged	Occurs after the grid's filter has been changed.
	GotFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	Holding	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabledChanged	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemsSourceChanged	Occurs after the ItemsSource property has been changed.
	KeyDown	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUp	(Inherited from **Windows.UI.Xaml.UIElement**)
	LayoutUpdated	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loading	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LostFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDelta	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCanceled	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLost	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEntered	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerExited	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMoved	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressed	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleased	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChanged	(Inherited from **Windows.UI.Xaml.UIElement**)
	PropertyChanged	Occurs every time any of the DataControlBase class properties have changed their value.
	RightTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	SelectedItemChanged	Occurs after the selected item has been changed.
	SelectionChanged	Occurs after grid's selection has been changed.
	ShowFilterPopup	Enables you to customize a column's filter dropdown.
	SizeChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Tapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	Unloaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

DataControlBase Properties

Serves as a base for classes that represents data-aware controls (e.g. GridControl).

The following tables list the members exposed by the DataControlBase type.

Public Properties

	Name	Description
	ActiveEditor	Gets the active editor. This is a dependency property.
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowFilterPanel	Gets whether the filter panel is displayed within a grid. This is a dependency property.
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by column. This is a dependency property.
	AllowColumnMoving	Gets or sets whether an end-user is allowed to move columns by dragging their headers. This is a dependency property.
	AllowCommitOnValidationAttributeError	Gets or sets whether or not a cell's value that has failed validation specified by the Data Annotations attribute(s), can be posted to a data source. This is a dependency property.
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users are allowed to change cell values. This is a dependency property.
	AllowLeaveInvalidEditor	Gets or sets whether an editor that did not pass validation can lose focus. This is a dependency property.
	AllowSorting	Gets or sets whether an end-user can sort data. This is a dependency property.

© 2018 Developer Express Inc.

	AutoGenerateColumns	Gets or sets whether columns should be created automatically for all fields in a data source. This is a dependency property.
	AutoScrollOnSorting	Gets or sets whether a grid is automatically scrolled after the order of rows has been changed. This is a dependency property.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BottomAdditionalRowsCount	
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style applied to data cells displayed within a grid. This is a dependency property.
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnHeaderStyle	Gets or sets the column header's style. This is a dependency property.
	ColumnHeaderTemplate	Gets or sets the template that defines the presentation of column header content. This is a dependency property.
	ColumnHeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property.
	ColumnHeaderToolTipTemplate	Gets or sets the template that defines the presentation of a column header's tooltip. This is a dependency property.
	Commands	Provides access to grid commands. This is a dependency property.
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CurrentGrid	Gets or sets the data control currently used within a grid. This is a dependency property.
	CurrentItem	Gets or sets the currently focused data row.
	CurrentViewChangedListener	This member supports the internal infrastructure and cannot be used directly from your code. This is a dependency property.
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FilterCriteria	Gets or sets the grid's filter criteria. This is a dependency property.
	FilterPanelText	Gets the text displayed within the Filter Panel. This is a dependency property.
	FilterString	Gets or sets the grid's filter expression. This is a dependency property.
	FixedSummariesLeft	Gets total summaries displayed within the Fixed Summary Panel and aligned to the left.
	FixedSummariesRight	Gets total summaries displayed within the Fixed Summary Panel and aligned to the right.
	FixedTotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property.
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusedBorderTemplate	Gets or sets the template that defines the presentation of a focused row's border. This is a dependency property.
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HasValidationError	Gets whether a validation error has been defined for the grid. This is a dependency property.
	HeadersData	Gets the information about column headers.
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IncrementalLoadingThreshold	Gets or sets the threshold range that governs when the grid will begin to prefetch more row items. This is a dependency property.

© 2018 Developer Express Inc.

	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEditing	Gets whether the focused cell is currently being edited. This is a dependency property.
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsFilterEnabled	Gets or sets whether the current filter is enabled. This is a dependency property.
	IsFocused	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsKeyboardFocusWithin	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsLoaded	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsMouseOver	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSynchronizedWithCurrentItem	Gets or sets whether a grid should keep the SelectedItem synchronized with the current item in the Windows.UI.Xaml.Data.ICollectionView. This is a dependency property.
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

© 2018 Developer Express Inc.

		)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemClickCommand	Gets or sets the command to invoke when an item is clicked.
	ItemNavigationMode	Gets or sets whether a single or double tap is needed to navigate to an item.
	ItemNavigationTargetParameterBinding	Gets or sets a binding that defines a parameter to be passed to the target page, invoked when clicking an item.
	ItemNavigationTargetType	Allows you to specify a page to be opened when an end-user clicks an item.
	ItemsSource	Gets or sets the grid's data source. This is a dependency property.
	KeepFocusedRowOnUpdate	Gets or sets whether the currently selected row retains focus when data is sorted, grouped or filtered.
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)

	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	SearchColumns	Gets or sets the field names against which searches are performed by the Search Panel. This is a dependency property.
	SearchDelay	Gets or sets the amount of time in milliseconds, after which a data search is initiated (in an automatic find mode). This is a dependency property.
	SearchPanelAllowFilter	Gets or sets whether the grid displays only those records that match the search criteria. This is a dependency property.
	SearchPanelClearOnClose	Gets or sets whether or not the search string is cleared when closing the Search Panel. This is a dependency property.
	SearchPanelCloseDelay	Gets or sets the amount of time, in milliseconds, after which a Search Panel that doesn't contain any search criteria is closed. This is a dependency property.
	SearchPanelCriteriaOperatorType	Gets or sets the logical operator type (AND or OR). This is a dependency property.
	SearchPanelFindFilter	Gets or sets the type of the comparison operator used to create filter conditions. This is a dependency property.
	SearchPanelFindMode	Gets or sets whether data searching starts automatically, or must be started manually. This is a dependency property.
	SearchPanelHighlightingSettings	Gets or sets the font settings used to highlight the text that matches the search criteria. This is a dependency property.
	SearchPanelHighlightResults	Gets or sets whether to highlight search results within located records. This is a dependency property.
	SearchString	Gets or sets the search string specified within the Search Panel. This is a dependency property.

© 2018 Developer Express Inc.

	SelectedItem	Get or sets the currently focused data item.
	SelectedItemHandle	Gets or sets the selected item's handle. This is a dependency property.
	SelectedItems	Gets data objects that correspond to items currently selected within a grid.
	SelectionMode	Gets or sets whether multiple row/cell selection is enabled. This is a dependency property.
	ShowColumnHeaders	Gets or sets whether a grid displays column headers. This is a dependency property.
	ShowFilterPanelMode	Gets or sets when the Filter Panel is displayed within a grid. This is a dependency property.
	ShowFixedTotalSummary	Gets or sets whether or not the Fixed Summary Panel is displayed within the grid. This is a dependency property.
	ShowSearchPanelMode	Gets or sets when the Search Panel is shown within the grid. This is a dependency property.
	ShowTotalSummary	Gets or sets whether to display the total summary panel.
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property.
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	SummariesIgnoreNullValues	Gets or sets whether null values must be ignored when calculating data summaries. This is a dependency property.
	TabIndex	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabIndexProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigation	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabNavigationProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	Tag	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Template	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TotalSummaryContentStyle	Gets or sets the style applied to total summary items displayed within a View. This is a dependency property.
	TotalSummaryData	Gets information about the total summary.
	TotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property.
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

	UseSystemFocusVisuals	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	UseSystemFocusVisualsProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ValidationError	Provides access to the object, which contains information about the validation error. This is a dependency property.
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VerticalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VirtualizingCacheHeight	Gets or sets the height of buffer areas above and below the visible area of the grid to be rendered.
	VirtualizingCacheWidth	Gets or sets the width of buffer areas above and below the visible area of the grid to be rendered. This is a dependency property.
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibleRowCount	Gets the total number of rows displayed within the grid.
	Width	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description
	AddHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	ApplyTemplate	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	BeginDataUpdate	Prevents visual and internal data updates until the EndDataUpdate method is called.
	BeginInit	Starts the control's runtime initialization.
	BeginSelection	Prevents selection updates until the EndSelection method is called.
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	CapturePointer	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClearColumnFilter	Overloaded. Removes the filter condition applied to the specified column.
	ClearSorting	Clears the sorting applied to the grid.
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CollapseAllGroups	Collapses all group rows.
	CommitEditing	Hides the active editor and posts all the changes made within the focused row to a data source if the row values are valid.
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	EndDataUpdate	Enables visual and internal data updates after the BeginDataUpdate method call, and updates the grid.
	EndInit	Ends the runtime initialization.
	EndSelection	Enables selection updates after calling the BeginSelection method, and forces an immediate update.
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	ExpandAllGroups	Expands all group rows.
	FindName	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Focus	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetBindingExpression	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GetCellElementByRowHandleAndColumn	Returns the specified cell's UI element.
	GetCellElementByTreeElement	Returns a cell that contains the specified tree element.
	GetCellValue	Returns the value of the specified data cell.
	GetColumnByTreeElement	Returns a column whose cell contains the specified tree element.

© 2018 Developer Express Inc.

	GetColumnFilterCriteria	Overloaded. Returns a filter applied to the specified column.
	GetColumnFilterString	Overloaded. Returns a filter expression applied to the specified column.
S	GetCurrentGrid	Gets the value of the CurrentGrid attached property for a specified Windows.UI.Xaml.DependencyObject.
S	GetCurrentViewChangedListener	Gets the value of the CurrentViewChangedListener attached property for a specified Windows.UI.Xaml.DependencyObject.
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	GetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetRowElementByRowHandle	Returns a UI element that is the specified row.
	GetRowState	This member supports the internal infrastructure and is not intended to be used directly from your code.
	GetSelectedCells	Returns the selected data cells.
	GetTotalSummaryValue	Returns the value of the specified total summary item.
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	HideEditor	Closes the active editor, discarding all the changes made.
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	InvalidateArrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidateMeasure	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsCellSelected	Indicates whether the specified cell is selected.
	IsItemSelected	Indicates whether the specified item is selected.
	LockFocus	(Inherited from **DevExpress.Core.Native.DXControl**)

© 2018 Developer Express Inc.

	Measure	(Inherited from **Windows.UI.Xaml.UIElement**)
	MergeColumnFilters	Overloaded. Combines the specified filter with the grid's current filter with the AND operator.
	MoveColumnTo	Moves the specified column to the specified position.
	MoveFirstRow	Moves focus to the first visible row within a grid.
	MoveLastRow	Moves focus to the last visible row within a grid.
	MoveNextPage	Moves focus forward to the bottom row displayed onscreen within a grid.
	MoveNextRow	Moves focus to the row following the one currently focused.
	MovePrevPage	Moves focus backward to the top row displayed onscreen within a grid.
	MovePrevRow	
	MoveSelectedItem	Selects the specified item.
	PopulateColumns	Creates columns for all fields in a bound data source.
	PostEditor	Saves the active editor's value to a data source without closing the editor.
	RaiseEvent	(Inherited from **DevExpress.Core.Native.DXControl**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RefreshData	Updates the control data.
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReleasePointerCapture	(Inherited from **Windows.UI.Xaml.UIElement**)
	ReleasePointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	RemoveHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	ScrollIntoView	Overloaded. Makes the specified row visible onscreen.
	SelectAll	Selects all items within a grid.
	SelectCell	Selects the cell.

© 2018 Developer Express Inc.

	SelectCells	Selects multiple cells.
	SelectItem	Overloaded. Selects the specified item.
	SelectRange	Selects multiple items, while preserving the current selection (if any).
	SetBinding	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	SetCurrentGrid	Sets the value of the CurrentGrid attached property to a specified Windows.UI.Xaml.DependencyObject.
S	SetCurrentViewChangedListener	Sets the value of the CurrentViewChangedListener attached property to a specified Windows.UI.Xaml.DependencyObject.
S	SetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ShowEditor	Activates the focused cell's inplace editor.
	SortBy	Sorts data by the values of the specified column.
	StartDragAsync	(Inherited from **Windows.UI.Xaml.UIElement**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	TransformToVisual	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TryStartDirectManipulation	(Inherited from **Windows.UI.Xaml.UIElement**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	UnselectAll	Unselects any selected items within a grid.
	UnselectCell	Unselects the specified cell.
	UnselectCells	Unselects the specified cells.
	UnselectItem	Overloaded. Unselects the specified item.
	UpdateLayout	(Inherited from **Windows.UI.Xaml.UIElement**)
	UpdateTotalSummary	Updates total summaries.

© 2018 Developer Express Inc.

	UpdateUnboundColumnValues	Updates unbound column values in the specified row.

Public Fields

	Name	Description
S	ActiveEditorProperty	Identifies the ActiveEditor dependency property.

	ShowTotalSummaryProperty	Identifies the ShowTotalSummary dependency property.
	ShowValidationAttributeErrorsProperty	Identifies the ShowValidationAttributeErrors dependency property.
	SummariesIgnoreNullValuesProperty	Identifies the SummariesIgnoreNullValues dependency property.
	TotalSummaryContentStyleProperty	Identifies the TotalSummaryContentStyle dependency property.
	TotalSummaryItemTemplateProperty	Identifies the TotalSummaryItemTemplate dependency property.
	ValidationErrorProperty	Identifies the ValidationError dependency property.
	VirtualizingCacheHeightProperty	Identifies the VirtualizingCacheHeight dependency property.
	VirtualizingCacheWidthProperty	Identifies the VirtualizingCacheWidth dependency property.

Public Events

	Name	Description
	AutoGeneratedColumns	Occurs after the columns have been automatically generated.
	AutoGeneratingColumn	Occurs each time an individual column is auto-generated.
	BeforeLayoutRefresh	Enables you to lock down end-user capabilities that affect the onscreen position of the focused row (e.g. moving row focus, row scrolling, sorting, etc.).
	ColumnsPopulated	Obsolete. Occurs after the columns have been automatically generated.
	CurrentColumnChanged	Occurs after the focused column has been changed.
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)

ActiveEditor Property

Gets the active editor. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActiveEditor As Control
```

C#

```
public Control ActiveEditor { get; }
```

Property Value

A control that represents the focused cell's editor. **null** (**Nothing** in Visual Basic) if no cell is currently being edited.

Remarks

Actual editors are only created when end-users start to edit a cell and are automatically destroyed when editing is completed.

When an end-user activates a cell within a column with a custom template, the GridControlBase.ShownEditor event is not raised. Since the GridControlBase.HiddenEditor event is not raised either, the **ActiveEditor** property value always stays **null**.

To learn more, see Data Editing.

ActualShowFilterPanel Property

Gets whether the filter panel is displayed within a grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualShowFilterPanel As Boolean
```

C#

```
public bool ActualShowFilterPanel { get; }
```

Property Value

true, if the filter panel is displayed within a grid; otherwise, **false**.

Remarks

By default, the ShowFilterPanelMode property is set to ShowFilterPanelMode.Default. In this instance, the filter panel is automatically shown at the bottom of the grid after a filter has been applied. Removing the filter hides this panel. Use the **ActualShowFilterPanel** property to obtain whether the filter panel is currently visible within a grid.

AllowColumnFiltering Property

Gets or sets whether an end-user can filter data by column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowColumnFiltering As Boolean
```

C#

```
public bool AllowColumnFiltering { get; set; }
```

Property Value

true to allow filtering data by column; otherwise, **false**.

See Also

DataControlBase Class

© 2018 Developer Express Inc.

AllowColumnMoving Property

Gets or sets whether an end-user is allowed to move columns by dragging their headers. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowColumnMoving As Boolean
```

C#

```
public bool AllowColumnMoving { get; set; }
```

Property Value

true, to allow an end-user to move columns; otherwise, **false**.

Remarks

If the **AllowColumnMoving** property is set to **true**, an end-user is allowed to reorder all columns or move them to the Group Panel via drag-and-drop.

Individual columns provide the ColumnBase.AllowMoving property, that allows the default behavior specified by the view to be overridden. For instance, if the **AllowColumnMoving** property is set to **true**, you can set an individual column's ColumnBase.AllowMoving property to 'False'. As a result, an end-user can move all columns displayed within the grid, except this one particular column.

ColumnBase.AllowMoving

© 2018 Developer Express Inc.

AllowCommitOnValidationAttributeError Property

Gets or sets whether or not a cell's value that has failed validation specified by the Data Annotations attribute(s), can be posted to a data source. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowCommitOnValidationAttributeError As Boolean
```

C#

```
public bool AllowCommitOnValidationAttributeError { get; set; }
```

Property Value

true to allow posting of invalid cell values to a data source; otherwise, **false**.

Remarks

The Grid Control supports DataAnnotations attributes that specify data validation rules (to use data annotation attributes, reference the *System.ComponentModel.DataAnnotations* assembly).

By default, if an end-user has entered an invalid value, the cell focus cannot be moved to another cell until the cell's value is corrected. To allow an invalid value to be posted to a data source and the cell focus to be moved to another cell, set the **AllowCommitOnValidationAttributeError** to **true**.

DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
ShowValidationAttributeErrors

© 2018 Developer Express Inc.

AllowEditing Property

Gets or sets whether end-users are allowed to change cell values. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowEditing As Boolean
```

C#

```
public bool AllowEditing { get; set; }
```

Property Value

true, to allow data editing; otherwise, **false**. The default is **true**.

Remarks

Data editing is allowed if the grid's **AllowEditing** option is set to **true** and the NavigationStyle property is set to GridControlNavigationStyle.Cell.

Individual columns provide the ColumnBase.AllowEditing property which allows the default behavior specified by the grid to be overridden for individual columns. By default, this property is set to 'Default'. In this instance, the column's behavior is controlled by the grid. Setting this property to 'True' or 'False' overrides the default behavior. For instance, you can set the column's ColumnBase.AllowEditing property to 'False' to prevent an end-user from changing its values.

To learn more, see Data Editing.

AllowLeaveInvalidEditor Property

Gets or sets whether an editor that did not pass validation can lose focus. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowLeaveInvalidEditor As Boolean
```

C#

```
public bool AllowLeaveInvalidEditor { get; set; }
```

Property Value

true, to allow moving focus from an editor with an invalid value; otherwise, **false**.

Remarks

The **AllowLeaveInvalidEditor** property is taken into account only when cells are validated using the GridControl.ValidateCell event.

See Also

DataControlBase Class
DataControlBase Members

AllowSorting Property

Gets or sets whether an end-user can sort data. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowSorting As Boolean
```

C#

```
public bool AllowSorting { get; set; }
```

Property Value

true to allow an end-user to sort data; otherwise, **false**.

Remarks

End-users are allowed to sort data if the grid's **AllowSorting** property is set to **true**. Individual columns provide the ColumnBase.AllowSorting property, allowing the default behavior specified by the grid to be overridden. Setting this property to 'True' or 'False' overrides the default behavior. This can be useful when it is required to prevent an end-user from sorting data by the values of specific columns.

If the **AllowSorting** property is set to true, end-users can sort data by the desired column by clicking its header.

If a column's ColumnBase.AllowSorting property is set to 'Default', the ability to sort data by its values is controlled by the grid's **AllowSorting** property. In this instance, to obtain whether an end-user can sort data by the current column, use the ColumnBase.ActualAllowSorting property.

AutoGenerateColumns Property

Gets or sets whether columns should be created automatically for all fields in a data source. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AutoGenerateColumns As Boolean
```

C#

```
public bool AutoGenerateColumns { get; set; }
```

Property Value

true, to automatically create columns for all fields in a data source; otherwise, **false**.

Remarks

If the **AutoGenerateColumns** property is set to **true**, the PopulateColumns method is automatically called after a grid has been bound to a data source. The PopulateColumns method creates columns for all fields in a data source and adds them to the GridControl.Columns collection.

To prevent grid columns from being created automatically, set the **AutoGenerateColumns** property to **false**.

See Also

AutoScrollOnSorting Property

Gets or sets whether a grid is automatically scrolled after the order of rows has been changed. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AutoScrollOnSorting As Boolean
```

C#

```
public bool AutoScrollOnSorting { get; set; }
```

Property Value

true to enable automatic row scrolling; otherwise, **false**.

Remarks

If the **AutoScrollOnSorting** property is set to **true**, changing the order of rows automatically scrolls the grid to make the focused row visible onscreen. To disable automatic row scrolling and preserve a scroll bar's position when reordering rows, turn off the **AutoScrollOnSorting** option.

CellStyle Property

Gets or sets the style applied to data cells displayed within a grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property CellStyle As Style
```

C#

```
public Style CellStyle { get; set; }
```

Property Value

A Windows.UI.Xaml.Style object that represents the style applied to data cells.

See Also

DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace

© 2018 Developer Express Inc.

ColumnHeaderStyle Property

Gets or sets the column header's style. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ColumnHeaderStyle As Style
```

C#

```
public Style ColumnHeaderStyle { get; set; }
```

Property Value

A Windows.UI.Xaml.Style object that represents the column header's style.

Remarks

Target type: BaseColumnHeaderControl.

See Also

DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace

© 2018 Developer Express Inc.

ColumnHeaderTemplate Property

Gets or sets the template that defines the presentation of column header content. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ColumnHeaderTemplate As DataTemplate
```

C#

```
public DataTemplate ColumnHeaderTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of column header contents.

Remarks

The templates supplied by the GridControl, allow you to completely replace the look and feel of visual elements while maintaining their existing behavior.

The binding source for the **ColumnHeaderTemplate** template is specified by the ColumnBase.HeaderCaption property's value. Each column provides the ColumnBase.HeaderTemplate property, that allows you to specify a custom template used to render the contents of its header.

ColumnHeaderTemplateSelector Property

Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ColumnHeaderTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ColumnHeaderTemplateSelector { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

A template that defines the presentation of column headers is specified by the FixedTotalSummaryItemTemplate property. If you have more than one template that can be used to render column headers, you can implement custom logic to choose the required template. To do this, derive from the Windows.UI.Xaml.Controls.DataTemplateSelector class, implement the **SelectTemplateCore** methods that return a template which meets the required condition, and assign it to the **ColumnHeaderTemplateSelector** property.

If both the ColumnHeaderTemplate and **ColumnHeaderTemplateSelector** are specified, a column header is rendered using the template returned by the template selector. If the template selector returns **null**, the template specified by the ColumnHeaderTemplate property is used.

ColumnHeaderToolTipTemplate Property

Gets or sets the template that defines the presentation of a column header's tooltip. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ColumnHeaderToolTipTemplate As DataTemplate
```

C#

```
public DataTemplate ColumnHeaderToolTipTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of a column header's tooltip.

Remarks

Use the ColumnBase.HeaderToolTip property to set the tooltip's text. Use the ColumnBase.HeaderToolTipTemplate property to define a custom representation for an individual column's tooltip. Use the **ColumnHeaderToolTipTemplate** property to specify a common tooltip template for all the columns in the Grid Control. The ColumnBase.ActualHeaderToolTipTemplate property returns a column's current tooltip template.

Commands Property

Provides access to grid commands. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Commands As DataControlCommandsBase
```

C#

```
public DataControlCommandsBase Commands { get; }
```

Property Value

A DevExpress.UI.Xaml.Grid.DataControlCommandsBase object that provides a set of grid commands.

CurrentGrid Attached Property

Gets or sets the data control currently used within a grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
See GetCurrentGrid, SetCurrentGrid
C#
See GetCurrentGrid, SetCurrentGrid

Property Value

A DataControlBase descendant that represents the current grid.

Remarks

This member supports the internal infrastructure and is not intended to be used directly from your code.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace

© 2018 Developer Express Inc.

CurrentItem Property

Gets or sets the currently focused data row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property CurrentItem As Object
```

C#

```
public object CurrentItem { get; set; }
```

Property Value

A System.Object specifying the focused row.

Remarks

When record multi-selection is disabled, both the **CurrentItem** and SelectedItem properties refer to the focused record.

When multi-selection mode is enabled, the **CurrentItem** property refers to the last selected object (focused record), while the SelectedItem property refers to the first selected object (the first item in the SelectedItems collection).

FilterCriteria Property

Gets or sets the grid's filter criteria. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property FilterCriteria As CriteriaOperator
```

C#

```
public CriteriaOperator FilterCriteria { get; set; }
```

Property Value

A CriteriaOperator object which represents filter criteria.

Remarks

Use the **FilterCriteria** property to create a filter expression that consists of multiple conditions applied to multiple columns, and apply it to the grid. Setting the **FilterCriteria** property to a new value clears any filters that have been previously applied.

To obtain a filter applied to a column, use the GetColumnFilterCriteria method. To apply a filter to a column(s) preserving the grid's filter (if applied), use the MergeColumnFilters method. To clear the required column's filter, use the ClearColumnFilter method.

To learn more, see Filtering in Code.

See Also

FilterPanelText Property

Gets the text displayed within the Filter Panel. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property FilterPanelText As String
```

C#

```
public string FilterPanelText { get; }
```

Property Value

A System.String value that specifies the text displayed within the filter panel.

Remarks

By default, the **Filter Panel** is automatically shown at the bottom of the grid, after a filter has been applied. Removing the filter hides this panel. The filter panel displays a string which represents the current filter criteria, and contains buttons to disable/enable and clear the filter. To make this panel always visible or always hidden, use the ShowFilterPanelMode property.

FilterString Property

Gets or sets the grid's filter expression. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property FilterString As String
```

C#

```
public string FilterString { get; set; }
```

Property Value

A System.String value that specifies the grid's filter expression.

Remarks

The filter expression specified by the **FilterString** property can consist of multiple conditions applied to multiple columns. Setting the **FilterString** property to a new value clears any filters that have been previously applied. The GetColumnFilterString method allows you to obtain the filter expression applied to an individual column.

The grid's filter can also be specified using the FilterCriteria property.

To learn more, see Filtering in Code.

FixedSummariesLeft Property

Gets total summaries displayed within the Fixed Summary Panel and aligned to the left.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property FixedSummariesLeft As IList(of GridTotalSummaryData)
```

C#

```
public IList<GridTotalSummaryData> FixedSummariesLeft { get; }
```

Property Value

A list of GridTotalSummaryData objects that contain information on total summaries.

Remarks

The **FixedSummariesLeft** property returns the collection of objects that contain information on total summary items whose SummaryItemBase.Alignment property is set to GridSummaryItemAlignment.Left.

See Also

DataControlBase Class

FixedSummariesRight Property

Gets total summaries displayed within the Fixed Summary Panel and aligned to the right.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property FixedSummariesRight As IList(of GridTotalSummaryData)
```

C#

```
public IList<GridTotalSummaryData> FixedSummariesRight { get; }
```

Property Value

A list of GridTotalSummaryData objects that contain information on total summaries.

Remarks

The **FixedSummariesRight** property returns the collection of objects that contain information on total summary items whose SummaryItemBase.Alignment property is set to GridSummaryItemAlignment.Right.

FixedTotalSummaryItemTemplate Property

Gets or sets the template that defines the presentation of total summary items. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property FixedTotalSummaryItemTemplate As DataTemplate
```

C#

```
public DataTemplate FixedTotalSummaryItemTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of total summary items.

FocusedBorderTemplate Property

Gets or sets the template that defines the presentation of a focused row's border. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property FocusedBorderTemplate As ControlTemplate
```

C#

```
public ControlTemplate FocusedBorderTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.ControlTemplate object.

HasValidationError Property

Gets whether a validation error has been defined for the grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property HasValidationError As Boolean
```

C#

```
public bool HasValidationError { get; set; }
```

Property Value

true if a validation error is defined for the grid; otherwise, **false**.

Remarks

The ValidationError property returns the validation error.

To learn more, see Row Validation and Editor Validation.

HeadersData Property

Gets the information about column headers.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property HeadersData As HeadersData
```

C#

```
public HeadersData HeadersData { get; }
```

Property Value

A DevExpress.UI.Xaml.Grid.HeadersData object that contains information about column headers.

See Also

DataControlBase Class

IncrementalLoadingThreshold Property

Gets or sets the threshold range that governs when the grid will begin to prefetch more row items. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property IncrementalLoadingThreshold As Double
```

C#

```
public Double IncrementalLoadingThreshold { get; set; }
```

Property Value

The loading threshold. By default, 0.

Remarks

Set the **IncrementalLoadingThreshold** property to a larger number (for instance 10 or more) if you expect the end-user to scroll through the grid very quickly, and it is worthwhile devoting resources to loading more items as quickly as possible.

Tip
The grid's items source must implement the Windows.UI.Xaml.Data.ISupportIncrementalLoading interface. To learn more, see the corresponding article in MSDN.

IsEditing Property

Gets whether the focused cell is currently being edited. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsEditing As Boolean
```

C#

```
public bool IsEditing { get; }
```

Property Value

true if the grid is in edit mode; otherwise, **false**.

Remarks

If data editing is allowed, use the ShowEditor method to activate the focused cell's inplace editor. After the editor has been shown, the grid functions in edit mode and the **IsEditing** property returns **true**. The ActiveEditor property returns the focused cell's editor.

IsFilterEnabled Property

Gets or sets whether the current filter is enabled. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property IsFilterEnabled As Boolean
```

C#

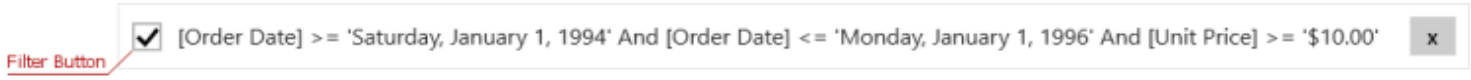
```
public bool IsFilterEnabled { get; set; }
```

Property Value

true to enable the current filter; otherwise, **false**.

Remarks

Set the **IsFilterEnabled** property to **false**, to temporarily disable the current filter in code. To enable the filter, set this property to **true**. End-users can do this by toggling the filter button as shown in the image below:



To learn more, see Filtering and Searching.

IsSynchronizedWithCurrentItem Property

Gets or sets whether a grid should keep the SelectedItem synchronized with the current item in the Windows.UI.Xaml.Data.ICollectionView. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property IsSynchronizedWithCurrentItem As Boolean
```

C#

```
public bool IsSynchronizedWithCurrentItem { get; set; }
```

Property Value

true to always synchronize the focused row with the current item in the Windows.UI.Xaml.Data.ICollectionView assigned to the ItemsSource; otherwise, **false**.

ItemClickCommand Property

Gets or sets the command to invoke when an item is clicked.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemClickCommand As ICommand
```

C#

```
public ICommand ItemClickCommand { get; set; }
```

Property Value

A command that implements the System.Windows.Input.ICommand interface.

ItemNavigationMode Property

Gets or sets whether a single or double tap is needed to navigate to an item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemNavigationMode As ItemNavigationMode
```

C#

```
public ItemNavigationMode ItemNavigationMode { get; set; }
```

Property Value

A DevExpress.UI.Xaml.Grid.ItemNavigationMode enumeration value.

Remarks

The **ItemNavigationMode** property specifies which action an end-user performs to navigate to an item. The **Tap** property value corresponds to single tap and the **DoubleTap** property value corresponds to double-tap.

ItemNavigationTargetParameterBinding Property

Gets or sets a binding that defines a parameter to be passed to the target page, invoked when clicking an item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemNavigationTargetParameterBinding As BindingBase
```

C#

```
public BindingBase ItemNavigationTargetParameterBinding { get; set; }
```

Property Value

A binding that defines a parameter to be passed to the target page, invoked when clicking an item.

Remarks

To learn more, see Lesson 3 - Displaying Detail Page.

ItemNavigationTargetType

© 2018 Developer Express Inc.

ItemNavigationTargetType Property

Allows you to specify a page to be opened when an end-user clicks an item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemNavigationTargetType As String
```

C#

```
public string ItemNavigationTargetType { get; set; }
```

Property Value

A page to be opened when an end-user clicks an item.

Remarks

See the following example: Lesson 3 - Displaying Detail Page.

See Also

ItemsSource Property

Gets or sets the grid's data source. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemsSource As Object
```

C#

```
public object ItemsSource { get; set; }
```

Property Value

An object that represents the data source from which the grid retrieves its data.

Remarks

The grid cannot operate without a data source. It can be bound to data from a database, from an XML file or to any data created at runtime. The grid can be bound to any object that implements the System.Collections.IEnumerable interface or its descendant (e.g. IList, ICollection). To bind a grid, you should assign a data source to the **ItemsSource** property. Note that the grid cannot be bound at design-time - only at runtime.

KeepFocusedRowOnUpdate Property

Gets or sets whether the currently selected row retains focus when data is sorted, grouped or filtered.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property KeepFocusedRowOnUpdate As Boolean
```

C#

```
public bool KeepFocusedRowOnUpdate { get; set; }
```

Property Value

true if the currently selected focus retains focus when data is sorted, grouped or filtered; **false** if the selected row handle (visual position) is kept when these actions are performed.

Remarks

If the **KeepFocusedRowOnUpdate** property is set to **false** the value of the SelectedItemHandle property is not changed when the data is sorted, grouped or filtered. Therefore, focus may move to another row when any of these actions is performed.

See Also

NavigationStyle Property

Gets or sets whether row focusing is allowed. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property NavigationStyle As GridControlNavigationStyle
```

C#

```
public GridControlNavigationStyle NavigationStyle { get; set; }
```

Property Value

A GridControlNavigationStyle enumeration value that specifies whether row focusing is allowed.

Remarks

If the **NavigationStyle** property is set to GridControlNavigationStyle.Row, end-users are allowed to navigate through the grid using the keyboard arrow keys to change the focused row. If you don't want to display the focused row, set the **NavigationStyle** property to GridControlNavigationStyle.None.

PreserveSorting Property

Gets or sets whether clicking a column header clears the existing sort settings. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property PreserveSorting As Boolean
```

C#

```
public bool PreserveSorting { get; set; }
```

Property Value

true, to preserve sorting by other columns when clicking a column header; otherwise, **false**.

Remarks

If the **PreserveSorting** property is set to **true**, clicking a column's header doesn't clear sorting by other columns. If the **PreserveSorting** property is set to **false**, hold the SHIFT key when clicking a column's header to preserve the existing sort settings.

To learn more, see Sorting.

SearchColumns Property

Gets or sets the field names against which searches are performed by the Search Panel. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SearchColumns As String
```

C#

```
public string SearchColumns { get; set; }
```

Property Value

A System.String value specifying field names against which searches are performed.

Remarks

By default, the **SearchColumns** property is set to "*". In this instance, searches are performed against all visible columns. To search against specific columns, assign the corresponding field names to the **SearchColumns** property, delimiting them with the ";" character.

To learn more, see Search Panel.

SearchDelay Property

Gets or sets the amount of time in milliseconds, after which a data search is initiated (in an automatic find mode). This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SearchDelay As Integer
```

C#

```
public int SearchDelay { get; set; }
```

Property Value

An integer that specifies the delay in milliseconds, after which a data search is initiated.

Remarks

When using the Search Panel, use the SearchPanelFindMode property to specify whether a data search is initiated automatically or must be started manually by pressing ENTER. In automatic search mode, a search starts after an end-user has stopped typing text, after the delay specified by the **SearchDelay** property.

SearchPanelAllowFilter Property

Gets or sets whether the grid displays only those records that match the search criteria. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SearchPanelAllowFilter As Boolean
```

C#

```
public bool SearchPanelAllowFilter { get; set; }
```

Property Value

true to display only those records that match the search criteria; otherwise, **false**.

Remarks

If the **SearchPanelAllowFilter** property is set to **true**, the records currently displayed within a View are filtered based on the search criteria. To learn more, see Search Panel.

SearchPanelClearOnClose Property

Gets or sets whether or not the search string is cleared when closing the Search Panel. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SearchPanelClearOnClose As Boolean
```

C#

```
public bool SearchPanelClearOnClose { get; set; }
```

Property Value

true, to clear the search string when closing the Search Panel; otherwise, **false**.

Remarks

To learn more, see Search Panel.

See Also

DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
SearchPanelCloseDelay

© 2018 Developer Express Inc.

SearchPanelCloseDelay Property

Gets or sets the amount of time, in milliseconds, after which a Search Panel that doesn't contain any search criteria is closed. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SearchPanelCloseDelay As Integer
```

C#

```
public int SearchPanelCloseDelay { get; set; }
```

Property Value

An integer that specifies the delay, in milliseconds, after which the empty Search Panel is closed.

Remarks

If the GridControlBase.ShowGroupPanel property is set to **true**, the Search Panel is displayed within the Group Panel. If the ShowSearchPanelMode property is set to ShowSearchPanelMode.Default, a Search Panel that doesn't contain any search criteria is automatically closed after a delay specified by the **SearchPanelCloseDelay** property.

By default, the **SearchPanelCloseDelay** property is set to **5000**.

SearchPanelCriteriaOperatorType Property

Gets or sets the logical operator type (AND or OR). This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SearchPanelCriteriaOperatorType As CriteriaOperatorType
```

C#

```
public CriteriaOperatorType SearchPanelCriteriaOperatorType { get; set; }
```

Property Value

The criteria operator type (logical AND or OR).

Remarks

Without quotation marks, words separated by the space character are treated as individual conditions (using the OR or AND logical operator). Use the **SearchPanelCriteriaOperatorType** property to specify the type of the logical operator.

The **SearchPanelCriteriaOperatorType** is not in effect when searching against specific columns. If the search criterion contains conditions for which search columns are specified, the AND logical operator is used.

To learn more, see Search Panel.

SearchPanelFindFilter Property

Gets or sets the type of the comparison operator used to create filter conditions. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SearchPanelFindFilter As FilterCondition
```

C#

```
public FilterCondition SearchPanelFindFilter { get; set; }
```

Property Value

One of the DevExpress.Data.Filtering.FilterCondition enumeration values.

Remarks

Use the **SearchPanelFindFilter** property to specify the comparison operator type: Contains, Equals, Like (by default) or StartsWith.

SearchPanelFindMode Property

Gets or sets whether data searching starts automatically, or must be started manually. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SearchPanelFindMode As FindMode
```

C#

```
public FindMode SearchPanelFindMode { get; set; }
```

Property Value

A FindMode enumeration value that specifies the find mode.

Remarks

Use the **SearchPanelFindMode** property, to specify how data searching should be initiated - automatically or manually. In automatic search mode, a search starts after an end-user has stopped typing text, after the delay specified by the SearchDelay property. In manual mode, an end-user should press ENTER.

To learn more, see Search Panel.

SearchPanelHighlightingSettings Property

Gets or sets the font settings used to highlight the text that matches the search criteria. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SearchPanelHighlightingSettings As HighlightingSettings
```

C#

```
public HighlightingSettings SearchPanelHighlightingSettings { get; set; }
```

Property Value

A HighlightingSettings object.

Remarks

If the SearchPanelHighlightResults property is set to **true**, the text that matches the search criteria is highlighted.

Country	City	Quantity	Unit Price	Discount	Total
Belgium	Charleroi	28	$36.40	$0.00	$1019.20
Belgium	Charleroi	12	$36.80	$0.00	$441.60
Belgium	Charleroi	30	$15.00	$0.00	$450.00
Belgium	Charleroi	20	$10.00	$0.00	$200.00
Belgium	Charleroi	30	$36.40	$0.00	$1092.00

Use the **SearchPanelHighlightingSettings** property to specify highlight settings.

SearchPanelHighlightResults

© 2018 Developer Express Inc.

SearchPanelHighlightResults Property

Gets or sets whether to highlight search results within located records. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SearchPanelHighlightResults As Boolean
```

C#

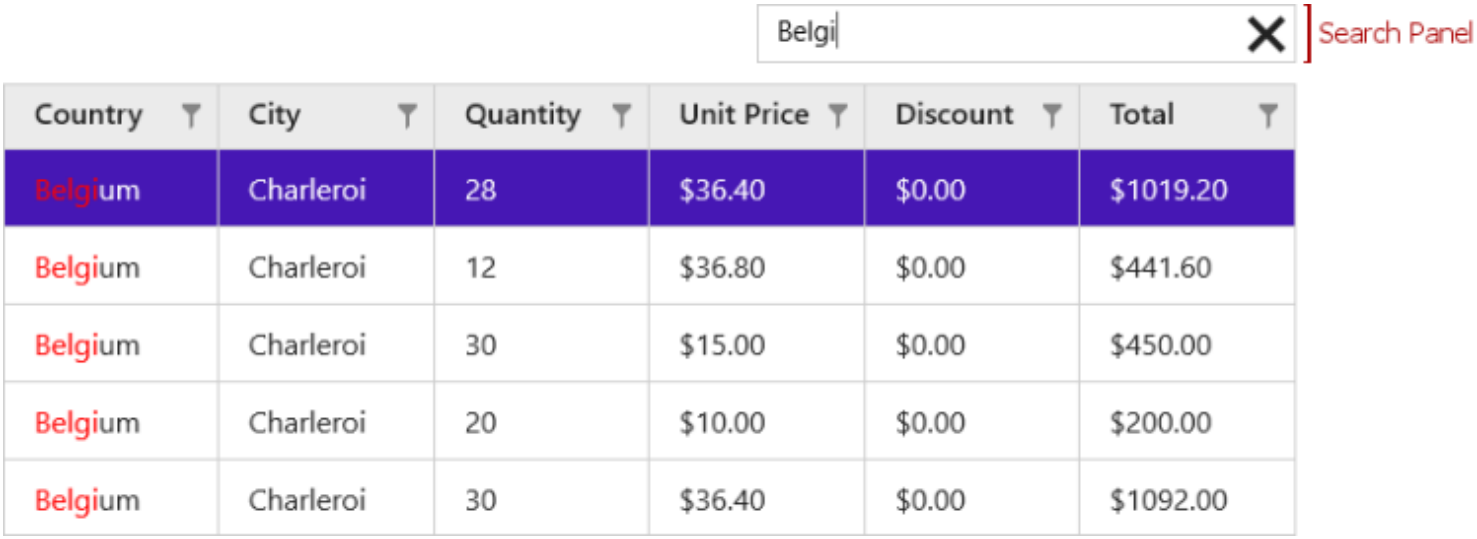
```
public bool SearchPanelHighlightResults { get; set; }
```

Property Value

true to highlight search results; otherwise, **false**.

Remarks

The search string can be obtained or specified via the SearchString property.



To learn more, see Search Panel.

© 2018 Developer Express Inc.

SearchString Property

Gets or sets the search string specified within the Search Panel. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SearchString As String
```

C#

```
public string SearchString { get; set; }
```

Property Value

A System.String value that specifies the search string.

Remarks

Searches are performed against a string specified by an end-user in the Search Panel. Use the **SearchString** property to obtain or specify the search string in code.

To learn more, see Search Panel.

SelectedItem Property

Get or sets the currently focused data item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedItem As Object
```

C#

```
public object SelectedItem { get; set; }
```

Property Value

A System.Object specifying the focused row.

Remarks

When record multi-selection is disabled, both the CurrentItem and **SelectedItem** properties refer to the focused record.

When multi-selection mode is enabled, the CurrentItem property refers to the last selected object (focused record), while the **SelectedItem** property refers to the first selected object (the first item in the SelectedItems collection).

See Also

SelectedItemHandle Property

Gets or sets the selected item's handle. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedItemHandle As Integer
```

C#

```
public int SelectedItemHandle { get; set; }
```

Property Value

An integer value that specifies the selected item's handle.

Remarks

The selected item isn't displayed if the NavigationStyle property is set to GridControlNavigationStyle.None. To specify the selected item, use the **SelectedItemHandle** property or the MoveSelectedItem method. If the specified item isn't visible onscreen, a grid is automatically scrolled to make the selected item visible.

After the selected item has been changed, the SelectedItemChanged event is raised.

SelectedItems Property

Gets data objects that correspond to items currently selected within a grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedItems As IList
```

C#

```
public IList SelectedItems { get; set; }
```

Property Value

The list which contains data objects corresponding to selected items.

Remarks

The **SelectedItems** collection contains data objects which correspond to items currently selected within a grid. To select an item, use the SelectItem method. To unselect an item, use the UnselectItem method.

See Also

SelectionMode Property

Gets or sets whether multiple row/cell selection is enabled. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectionMode As MultiSelectMode
```

C#

```
public MultiSelectMode SelectionMode { get; set; }
```

Property Value

A MultiSelectMode enumeration value that specifies the selection mode.

Remarks

Multiple row/cell selection isn't allowed if the NavigationStyle property is set to GridControlNavigationStyle.None and/or the **SelectionMode** property is set to MultiSelectMode.None. To enable multiple row selection, set the **SelectionMode** property to MultiSelectMode.Row or MultiSelectMode.RowExtended. Multiple cell selection (block selection) is enabled by setting the **SelectionMode** property to MultiSelectMode.Cell or MultiSelectMode.CellExtended.

ShowColumnHeaders Property

Gets or sets whether a grid displays column headers. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowColumnHeaders As Boolean
```

C#

```
public bool ShowColumnHeaders { get; set; }
```

Property Value

true to show column headers within a grid; otherwise, **false**.

ShowFilterPanelMode Property

Gets or sets when the Filter Panel is displayed within a grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowFilterPanelMode As ShowFilterPanelMode
```

C#

```
public ShowFilterPanelMode ShowFilterPanelMode { get; set; }
```

Property Value

A ShowFilterPanelMode enumeration value that specifies when a grid displays the Filter Panel.

Remarks

By default, the Filter Panel is automatically shown at the bottom of the grid after a filter has been applied. Removing the filter hides this panel. The filter panel displays a string which specifies the current filter criteria, and contains buttons to disable/enable and clear the filter. To make this panel always visible or always hidden, use the **ShowFilterPanelMode** property.

To learn more, see Filtering and Searching.

ShowFixedTotalSummary Property

Gets or sets whether or not the Fixed Summary Panel is displayed within the grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowFixedTotalSummary As Boolean
```

C#

```
public bool ShowFixedTotalSummary { get; set; }
```

Property Value

true to display the Fixed Summary Panel within the grid; otherwise, **false**.

Remarks

To learn more, see Total Summary.

See Also

ShowSearchPanelMode Property

Gets or sets when the Search Panel is shown within the grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowSearchPanelMode As ShowSearchPanelMode
```

C#

```
public ShowSearchPanelMode ShowSearchPanelMode { get; set; }
```

Property Value

A ShowSearchPanelMode enumeration value.

Remarks

If the GridControlBase.ShowGroupPanel property is set to **true**, the Search Panel is displayed within the Group Panel. If the **ShowSearchPanelMode** property is set to ShowSearchPanelMode.Default, a Search Panel that doesn't contain any search criteria is automatically closed after a delay specified by the SearchPanelCloseDelay property.

To learn more, see Search Panel.

ShowTotalSummary Property

Gets or sets whether to display the total summary panel.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowTotalSummary As Boolean
```

C#

```
public bool ShowTotalSummary { get; set; }
```

Property Value

true, to show the summary panel within the grid; otherwise, **false**.

Remarks

A total summary represents the value of an aggregate function calculated over all data rows displayed within the grid. Total summaries are displayed within the Summary Panel or Fixed Summary Panel, provided that the ShowTotalSummary and ShowFixedTotalSummary options are enabled, respectively. Summaries displayed within the **Fixed Summary Panel** are not horizontally scrolled. They are always visible onscreen, regardless of the corresponding column's position and visibility.

To learn more, see Total Summary.

ShowValidationAttributeErrors Property

Gets or sets whether or not error icons are displayed within cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowValidationAttributeErrors As Boolean
```

C#

```
public bool ShowValidationAttributeErrors { get; set; }
```

Property Value

true to display errors within cells that fail validation specified by the Data Annotations attribute(s); otherwise, **false**.

Remarks

The Grid Control supports DataAnnotations attributes that specify data validation rules (to use data annotation attributes, reference the *System.ComponentModel.DataAnnotations* assembly).

By default, the Grid displays error icons within cells with invalid values. In this instance, if the AllowCommitOnValidationAttributeError property is set to **false**, the cell focus cannot be moved to another cell until the cell's value is corrected.

To override the default behavior and hide errors for an individual column, set its ColumnBase.ShowValidationAttributeErrors property to **false**. If the ColumnBase.ShowValidationAttributeErrors property is set to DefaultBoolean.Default, the visibility of error icons is specified by the **ShowValidationAttributeErrors** property.

SummariesIgnoreNullValues Property

Gets or sets whether null values must be ignored when calculating data summaries. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SummariesIgnoreNullValues As Boolean
```

C#

```
public bool SummariesIgnoreNullValues { get; set; }
```

Property Value

true to ignore null values when calculating data summaries; otherwise, **false**.

TotalSummaryContentStyle Property

Gets or sets the style applied to total summary items displayed within a View. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property TotalSummaryContentStyle As Style
```

C#

```
public Style TotalSummaryContentStyle { get; set; }
```

Property Value

The style applied to total summary items displayed within the grid.

TotalSummaryData Property

Gets information about the total summary.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property TotalSummaryData As TotalSummaryData
```

C#

```
public TotalSummaryData TotalSummaryData { get; }
```

Property Value

A DevExpress.UI.Xaml.Grid.TotalSummaryData object that contains information about the total summary.

See Also

DataControlBase Class

TotalSummaryItemTemplate Property

Gets or sets the template that defines the presentation of total summary items. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property TotalSummaryItemTemplate As DataTemplate
```

C#

```
public DataTemplate TotalSummaryItemTemplate { get; set; }
```

Property Value

The template that defines the presentation of total summary items.

ValidationError Property

Provides access to the object, which contains information about the validation error. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ValidationError As BaseValidationError
```

C#

```
public BaseValidationError ValidationError { get; }
```

Property Value

A BaseValidationError object.

Remarks

To learn more, see Row Validation.

See Also

© 2018 Developer Express Inc.

VirtualizingCacheHeight Property

Gets or sets the height of buffer areas above and below the visible area of the grid to be rendered.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property VirtualizingCacheHeight As Double
```

C#

```
public Double VirtualizingCacheHeight { get; set; }
```

Property Value

A System.Double value that is the height of the buffer area (in pixels).

Remarks

By default, the grid renders only those rows that are visible onscreen. Each time the grid is vertically scrolled, it loads the missing rows. This operation is not instantaneous and can be visually detectable. Use the **VirtualizingCacheHeight** property to set the height of buffer areas above and below the visible area to improve scrolling performance.

To learn more, see Data Scrolling Overview.

See Also

© 2018 Developer Express Inc.

VirtualizingCacheWidth Property

Gets or sets the width of buffer areas above and below the visible area of the grid to be rendered. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property VirtualizingCacheWidth As Double
```

C#

```
public Double VirtualizingCacheWidth { get; set; }
```

Property Value

A System.Double value that is the width of the buffer area (in pixels).

Remarks

By default, the grid renders only those columns that are visible onscreen. Each time the grid is horizontally scrolled, it loads the missing columns. This operation is not instantaneous and can be visually detectable. Use the **VirtualizingCacheWidth** property to set the width of buffer areas to the left and right side of the visible area to improve scrolling performance.

VisibleRowCount Property

Gets the total number of rows displayed within the grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property VisibleRowCount As Integer
```

C#

```
public int VisibleRowCount { get; }
```

Property Value

An integer value that specifies the total number of rows displayed within the grid.

Remarks

The **VisibleRowCount** property returns the total number of group and data rows that are not hidden within collapsed groups.

DataControlBase Events

Serves as a base for classes that represents data-aware controls (e.g. GridControl).

The following tables list the members exposed by the DataControlBase type.

Public Events

	Name	Description
	AutoGeneratedColumns	Occurs after the columns have been automatically generated.
	AutoGeneratingColumn	Occurs each time an individual column is auto-generated.
	BeforeLayoutRefresh	Enables you to lock down end-user capabilities that affect the onscreen position of the focused row (e.g. moving row focus, row scrolling, sorting, etc.).
	ColumnsPopulated	Obsolete. Occurs after the columns have been automatically generated.
	CurrentColumnChanged	Occurs after the focused column has been changed.
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	Drop	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	FilterChanged	Occurs after the grid's filter has been changed.
	GotFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	Holding	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabledChanged	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemsSourceChanged	Occurs after the ItemsSource property has been changed.

© 2018 Developer Express Inc.

	KeyDown	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUp	(Inherited from **Windows.UI.Xaml.UIElement**)
	LayoutUpdated	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loading	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LostFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDelta	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCanceled	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLost	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEntered	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExited	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMoved	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressed	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleased	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChanged	(Inherited from **Windows.UI.Xaml.UIElement**)
	PropertyChanged	Occurs every time any of the DataControlBase class properties have changed their value.
	RightTapped	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	SelectedItemChanged	Occurs after the selected item has been changed.
	SelectionChanged	Occurs after grid's selection has been changed.
	ShowFilterPopup	Enables you to customize a column's filter dropdown.
	SizeChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Tapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	Unloaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

AutoGeneratedColumns Event

Occurs after the columns have been automatically generated.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public AutoGeneratedColumns As EventHandler
```

C#

```
public event EventHandler AutoGeneratedColumns
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

Remarks

If the grid's AutoGenerateColumns option is enabled, binding the grid to a data source automatically generates columns for all data source fields. After all columns have been created and added to the GridControl.Columns collection, the grid fires the **AutoGeneratedColumns** event. Handle this event to specify column settings (e.g., assign column editors, hide individual columns, etc.).

The **AutoGeneratedColumns** event is not raised if the AutoGenerateColumns property is set to **false**.

See Also

DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
PopulateColumns

© 2018 Developer Express Inc.

AutoGeneratingColumn Event

Occurs each time an individual column is auto-generated.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public AutoGeneratingColumn As AutoGeneratingColumnEventHandler
```

C#

```
public event AutoGeneratingColumnEventHandler AutoGeneratingColumn
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.AutoGeneratingColumnEventArgs containing data related to this event.

Remarks

Use the **AutoGeneratingColumn** event to change or cancel an automatically generated column at the time it is created.

See Also

DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
AutoGenerateColumns

© 2018 Developer Express Inc.

BeforeLayoutRefresh Event

Enables you to lock down end-user capabilities that affect the onscreen position of the focused row (e.g. moving row focus, row scrolling, sorting, etc.).

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public BeforeLayoutRefresh As GridCancelEventHandler
```

C#

```
public event GridCancelEventHandler BeforeLayoutRefresh
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.GridCancelEventArgs containing data related to this event.

The following **GridCancelEventArgs** properties provide information specific to this event.

Property	Description
Cancel	

See Also

DataControlBase Class
DataControlBase Members

ColumnsPopulated Event

NOTE: This type is now obsolete.

Use the AutoGeneratedColumns event instead

Occurs after the columns have been automatically generated.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public ColumnsPopulated As EventHandler
```

C#

```
public event EventHandler ColumnsPopulated
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

Remarks

If the grid's AutoGenerateColumns option is enabled, binding the grid to a data source automatically generates columns for all data source fields. After all columns have been created and added to the GridControl.Columns collection, the grid fires the **ColumnsPopulated** event. Handle this event to specify column settings (e.g. apply sorting, hide individual columns, etc.).

The **ColumnsPopulated** event is not raised if the AutoGenerateColumns property is set to **false**.

AutoGenerateColumns

© 2018 Developer Express Inc.

CurrentColumnChanged Event

Occurs after the focused column has been changed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public CurrentColumnChanged As CurrentColumnChangedEventHandler
```

C#

```
public event CurrentColumnChangedEventHandler CurrentColumnChanged
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.CurrentColumnChangedEventArgs containing data related to this event.

See Also

FilterChanged Event

Occurs after the grid's filter has been changed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public FilterChanged As EventHandler
```

C#

```
public event EventHandler FilterChanged
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

Remarks

The **FilterChanged** event is fired after the grid's filter has been changed (for example, after the FilterString has been modified).

ItemsSourceChanged Event

Occurs after the ItemsSource property has been changed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public ItemsSourceChanged As ItemsSourceChangedEventHandler
```

C#

```
public event ItemsSourceChangedEventHandler ItemsSourceChanged
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.ItemsSourceChangedEventArgs containing data related to this event.

See Also

DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace

© 2018 Developer Express Inc.

PropertyChanged Event

Occurs every time any of the DataControlBase class properties have changed their value.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public PropertyChanged As PropertyChangedEventHandler
```

C#

```
public event PropertyChangedEventHandler PropertyChanged
```

Event Data

The event handler receives an argument of type System.ComponentModel.PropertyChangedEventArgs containing data related to this event.

The following **PropertyChangedEventArgs** properties provide information specific to this event.

Property	Description
PropertyName

SelectedItemChanged Event

Occurs after the selected item has been changed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public SelectedItemChanged As SelectedItemChangedEventHandler
```

C#

```
public event SelectedItemChangedEventHandler SelectedItemChanged
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.SelectedItemChangedEventArgs containing data related to this event.

Remarks

The selected item is displayed within a grid if the NavigationStyle property isn't set to GridControlNavigationStyle.None. The selected item's handle is returned by the SelectedItemHandle property. Its visible position within a grid can be obtained using the GridControl.GetRowVisibleIndexByHandle method.

The **SelectedItemChanged** event is raised after the selected item's underlying data object has been changed (e.g. focus moves to another item). However, when sorting or grouping, items are reordered, their handles are changed but the data object corresponding to the focused row is not changed. The **SelectedItemChanged** event is not raised.

To respond to changing the focused row's handle, use the SelectedItemChanged event.

SelectionChanged Event

Occurs after grid's selection has been changed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public SelectionChanged As GridSelectionChangedEventHandler
```

C#

```
public event GridSelectionChangedEventHandler SelectionChanged
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.GridSelectionChangedEventArgs containing data related to this event.

Remarks

Each time the grid's selection is changed, the **SelectionChanged** event is raised. The event parameter's 'Action' property indicates how the grid's selection has been changed.

The **SelectionChanged** event isn't fired if the SelectionMode property is set to MultiSelectMode.None.

ShowFilterPopup Event

Enables you to customize a column's filter dropdown.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public ShowFilterPopup As FilterPopupEventHandler
```

C#

```
public event FilterPopupEventHandler ShowFilterPopup
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.FilterPopupEventArgs containing data related to this event.

Remarks

The **ShowFilterPopup** event is raised before a column's filter dropdown is shown, allowing you to customize its filter items. For example, you can delete existing items and add new items with custom captions and filter values.

DataControlBase Methods

Serves as a base for classes that represents data-aware controls (e.g. GridControl).

The following tables list the members exposed by the DataControlBase type.

Public Methods

	Name	Description
	AddHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	ApplyTemplate	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	BeginDataUpdate	Prevents visual and internal data updates until the EndDataUpdate method is called.
	BeginInit	Starts the control's runtime initialization.
	BeginSelection	Prevents selection updates until the EndSelection method is called.
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)
	CapturePointer	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClearColumnFilter	Overloaded. Removes the filter condition applied to the specified column.
	ClearSorting	Clears the sorting applied to the grid.
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CollapseAllGroups	Collapses all group rows.
	CommitEditing	Hides the active editor and posts all the changes made within the focused row to a data source if the row values are valid.
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	EndDataUpdate	Enables visual and internal data updates after the BeginDataUpdate method call, and updates the grid.
	EndInit	Ends the runtime initialization.
	EndSelection	Enables selection updates after calling the BeginSelection method, and forces an immediate update.
S	Equals	(Inherited from **System.Object**)

© 2018 Developer Express Inc.

	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	ExpandAllGroups	Expands all group rows.
	FindName	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Focus	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetBindingExpression	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GetCellElementByRowHandleAndColumn	Returns the specified cell's UI element.
	GetCellElementByTreeElement	Returns a cell that contains the specified tree element.
	GetCellValue	Returns the value of the specified data cell.
	GetColumnByTreeElement	Returns a column whose cell contains the specified tree element.
	GetColumnFilterCriteria	Overloaded. Returns a filter applied to the specified column.
	GetColumnFilterString	Overloaded. Returns a filter expression applied to the specified column.
S	GetCurrentGrid	Gets the value of the CurrentGrid attached property for a specified Windows.UI.Xaml.DependencyObject.
S	GetCurrentViewChangedListener	Gets the value of the CurrentViewChangedListener attached property for a specified Windows.UI.Xaml.DependencyObject.
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	GetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetRowElementByRowHandle	Returns a UI element that is the specified row.
	GetRowState	This member supports the internal infrastructure and is not intended to be used directly from your code.

© 2018 Developer Express Inc.

	GetSelectedCells	Returns the selected data cells.
	GetTotalSummaryValue	Returns the value of the specified total summary item.
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	HideEditor	Closes the active editor, discarding all the changes made.
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	InvalidateArrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidateMeasure	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsCellSelected	Indicates whether the specified cell is selected.
	IsItemSelected	Indicates whether the specified item is selected.
	LockFocus	(Inherited from **DevExpress.Core.Native.DXControl**)
	Measure	(Inherited from **Windows.UI.Xaml.UIElement**)
	MergeColumnFilters	Overloaded. Combines the specified filter with the grid's current filter with the AND operator.
	MoveColumnTo	Moves the specified column to the specified position.
	MoveFirstRow	Moves focus to the first visible row within a grid.
	MoveLastRow	Moves focus to the last visible row within a grid.
	MoveNextPage	Moves focus forward to the bottom row displayed onscreen within a grid.
	MoveNextRow	Moves focus to the row following the one currently focused.
	MovePrevPage	Moves focus backward to the top row displayed onscreen within a grid.
	MovePrevRow	
	MoveSelectedItem	Selects the specified item.
	PopulateColumns	Creates columns for all fields in a bound data source.
	PostEditor	Saves the active editor's value to a data source without closing the editor.

© 2018 Developer Express Inc.

	RaiseEvent	(Inherited from **DevExpress.Core.Native.DXControl**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RefreshData	Updates the control data.
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReleasePointerCapture	(Inherited from **Windows.UI.Xaml.UIElement**)
	ReleasePointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	RemoveHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	ScrollIntoView	Overloaded. Makes the specified row visible onscreen.
	SelectAll	Selects all items within a grid.
	SelectCell	Selects the cell.
	SelectCells	Selects multiple cells.
	SelectItem	Overloaded. Selects the specified item.
	SelectRange	Selects multiple items, while preserving the current selection (if any).
	SetBinding	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	SetCurrentGrid	Sets the value of the CurrentGrid attached property to a specified Windows.UI.Xaml.DependencyObject.
S	SetCurrentViewChangedListener	Sets the value of the CurrentViewChangedListener attached property to a specified Windows.UI.Xaml.DependencyObject.
S	SetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ShowEditor	Activates the focused cell's inplace editor.
	SortBy	Sorts data by the values of the specified column.

© 2018 Developer Express Inc.

	StartDragAsync	(Inherited from **Windows.UI.Xaml.UIElement**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	TransformToVisual	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TryStartDirectManipulation	(Inherited from **Windows.UI.Xaml.UIElement**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	UnselectAll	Unselects any selected items within a grid.
	UnselectCell	Unselects the specified cell.
	UnselectCells	Unselects the specified cells.
	UnselectItem	Overloaded. Unselects the specified item.
	UpdateLayout	(Inherited from **Windows.UI.Xaml.UIElement**)
	UpdateTotalSummary	Updates total summaries.
	UpdateUnboundColumnValues	Updates unbound column values in the specified row.

BeginDataUpdate Method

Prevents visual and internal data updates until the EndDataUpdate method is called.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub BeginDataUpdate()
```

C#

```
public void BeginDataUpdate()
```

Remarks

To prevent internal data updates, use the **BeginDataUpdate** and EndDataUpdate methods. This allows you to improve the control's performance when sorting by a column, adding, deleting, or modifying records at the data source level, etc.

If the code that performs a sequence of any of these operations is wrapped with the **BeginDataUpdate** and EndDataUpdate methods, the grid performs only a single data update, reflecting all changes made, after the EndDataUpdate method is called.

Note	
If a data source is modified from another thread (e.g. using Parallel.ForEach), changes made should be enclosed within the **BeginDataUpdate** and EndDataUpdate method calls. Otherwise, the grid correctly processes these changes and an exception will be thrown.	

See Also

DataControlBase Class

EndDataUpdate

© 2018 Developer Express Inc.

BeginInit Method

Starts the control's runtime initialization.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Sub BeginInit()
```
C#
```
public override void BeginInit()
```

Remarks

To end the control's initialization, call the EndInit method.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace

BeginSelection Method

Prevents selection updates until the EndSelection method is called.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub BeginSelection()
```

C#

```
public void BeginSelection()
```

Remarks

A grid allows a sequence of row selection operations to be performed without having the grid render itself after each modification. To do this, the code performing sequential changes must be enclosed within calls to the **BeginSelection** and EndSelection methods. This improves performance, and avoids unnecessary rendering operations.

ClearColumnFilter Method

Removes the filter condition applied to the specified column.

Overload List

Name	Description
void ClearColumnFilter(ColumnBase column)	Removes the filter condition applied to the specified column.
void ClearColumnFilter(string fieldName)	Removes the filter condition applied to the specified column.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
DataControlBase.ClearColumnFilter Overload List

Removes the filter condition applied to the specified column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub ClearColumnFilter(
   ByVal column As ColumnBase
)
```
C#
```
public void ClearColumnFilter(
   ColumnBase column
)
```

Parameters
column
A ColumnBase descendant that represents the column whose filter is cleared.

Remarks

To clear the grid's filter, set the FilterCriteria property to **null** or the FilterString property to an empty string.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
DataControlBase.ClearColumnFilter Overload List
FilterCriteria
FilterString

Removes the filter condition applied to the specified column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub ClearColumnFilter(
   ByVal fieldName As String
)
```
C#
```
public void ClearColumnFilter(
   string fieldName
)
```

Parameters

© 2018 Developer Express Inc.

fieldName
A System.String value that specifies the field name of the column whose filter is cleared.

Remarks

To clear the control's filter, set the FilterCriteria property to **null** or the FilterString property to an empty string.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
DataControlBase.ClearColumnFilter Overload List
FilterCriteria
FilterString

© 2018 Developer Express Inc.

ClearSorting Method

Clears the sorting applied to the grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub ClearSorting()
```

C#

```
public void ClearSorting()
```

Remarks

If the grid's data is not grouped, the **ClearSorting** method clears the sorting applied to columns. Otherwise, if grouping is applied, the **ClearSorting** method preserves sorting applied to grouping columns, because group rows are always sorted.

To ungroup the grid, use the GridControl.ClearGrouping method.

See Also

DataControlBase Class

CollapseAllGroups Method

Collapses all group rows.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
abstract Public Sub CollapseAllGroups()
```

C#

```
public abstract void CollapseAllGroups()
```

Remarks

To expand all groups, use the GridControl.ExpandAllGroups method. To expand or collapse a group row, use the GridControl.ExpandGroupRow or GridControl.CollapseGroupRow method, respectively.

See Also

DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
GridControl.ExpandAllGroups
GridControl.ExpandGroupRow
GridControl.CollapseGroupRow

CommitEditing Method

Hides the active editor and posts all the changes made within the focused row to a data source if the row values are valid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function CommitEditing() As Boolean
```

C#

```
public bool CommitEditing()
```

Return Value

true, if the values within the focused row's cells are valid; otherwise, **false**.

Remarks

By default, the grid automatically validates the changes made within the focused row when the row focus is about to be moved to another row. If all the new values are valid, they are posted to the grid's data source. Otherwise, the row remains focused until an end-user corrects invalid values. To manually force row validation, use the **CommitEditing** method. If the validation fails, new values are not posted to a data source, and the **CommitEditing** method returns **false**. Otherwise, new values are saved and the **CommitEditing** method returns **true**.

See Also

EndDataUpdate Method

Enables visual and internal data updates after the BeginDataUpdate method call, and updates the grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub EndDataUpdate()
```

C#

```
public void EndDataUpdate()
```

Remarks

To prevent internal data updates, use the BeginDataUpdate and **EndDataUpdate** methods. This allows you to improve the control's performance when sorting by a column, adding, deleting, or modifying records at the data source level, etc.

If the code that performs a sequence of any of these operations is wrapped with the BeginDataUpdate and **EndDataUpdate** methods, the grid performs only a single data update, reflecting all changes made, after the **EndDataUpdate** method is called.

Note	
If a data source is modified from another thread (e.g. using Parallel.ForEach), changes made should be enclosed within the BeginDataUpdate and **EndDataUpdate** method calls. Otherwise, the grid correctly processes these changes and an exception will be thrown.

EndInit Method

Ends the runtime initialization.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Sub EndInit()
```

C#

```
public override void EndInit()
```

Remarks

To start the grid's initialization, use the BeginInit method.

© 2018 Developer Express Inc.

EndSelection Method

Enables selection updates after calling the BeginSelection method, and forces an immediate update.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub EndSelection()
```

C#

```
public void EndSelection()
```

Remarks

A grid allows a sequence of row selection operations to be performed without having the grid render itself after each modification. To do this, the code performing sequential changes must be enclosed within calls to the BeginSelection and **EndSelection** methods. This improves performance, and avoids unnecessary rendering operations.

ExpandAllGroups Method

Expands all group rows.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
abstract Public Sub ExpandAllGroups()
```

C#

```
public abstract void ExpandAllGroups()
```

Remarks

To collapse all groups, use the GridControl.CollapseAllGroups method. To expand or collapse a group row, use the GridControl.ExpandGroupRow or GridControl.CollapseGroupRow method, respectively.

GetCellElementByRowHandleAndColumn Method

Returns the specified cell's UI element.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetCellElementByRowHandleAndColumn(
   ByVal rowHandle As Integer,
   ByVal column As ColumnBase
) As FrameworkElement
```

C#

```
public FrameworkElement GetCellElementByRowHandleAndColumn(
   int rowHandle,
   ColumnBase column
)
```

Parameters

rowHandle
An integer value that specifies the row's handle.
column
A ColumnBase descendant that specifies the column containing the cell.

Return Value

A Windows.UI.Xaml.FrameworkElement descendant that specifies the cell's UI element.

See Also

DataControlBase Class
DataControlBase Members

GetCellElementByTreeElement

© 2018 Developer Express Inc.

GetCellElementByTreeElement Method

Returns a cell that contains the specified tree element.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetCellElementByTreeElement(
   ByVal d As DependencyObject
) As FrameworkElement
```

C#

```
public FrameworkElement GetCellElementByTreeElement(
   DependencyObject d
)
```

Parameters

d
The element contained within the cell.

Return Value

A Windows.UI.Xaml.FrameworkElement descendant that specifies the cell's UI element, containing the specified tree element. **null**, if the cell was not found.

See Also

DataControlBase Class
DataControlBase Members

GetCellValue Method

Returns the value of the specified data cell.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetCellValue(
   ByVal rowHandle As Integer,
   ByVal fieldName As String
) As Object
```

C#

```
public object GetCellValue(
   int rowHandle,
   string fieldName
)
```

Parameters

rowHandle
An integer value that specifies the handle of the row that contains the cell.
fieldName
A System.String value that specifies the column's field name.

Return Value

An object that represents the specified cell's value.

See Also

DataControlBase Class

GetColumnByTreeElement Method

Returns a column whose cell contains the specified tree element.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetColumnByTreeElement(
   ByVal d As DependencyObject
) As ColumnBase
```

C#

```
public ColumnBase GetColumnByTreeElement(
   DependencyObject d
)
```

Parameters

d
The element contained within the column.

Return Value

A ColumnBase descendant that specifies the column whose cell contains the specified tree element. **null**, if the column was not found.

Remarks

C#

```
private void grid_PointerMoved_1(object sender, Windows.UI.Xaml.Input.PointerRoutedEventArgs e) {
    ColumnBase column = grid.GetColumnByTreeElement(e.OriginalSource as DependencyObject);
    if (column != null) {
        // ...
    }
}
```

DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
DataControlBase.GetColumnFilterCriteria Overload List

Returns a filter applied to the specified column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function GetColumnFilterCriteria(
   ByVal column As ColumnBase
) As CriteriaOperator
```
C#
```
public CriteriaOperator GetColumnFilterCriteria(
   ColumnBase column
)
```

Parameters
column
A ColumnBase descendant that represents the grid column.

Return Value

A CriteriaOperator object that represents filter criteria applied to the specified column. **null**, if data isn't filtered by the values of the specified column.

Remarks

To specify the grid's filter, use the FilterCriteria or FilterString property. To apply a filter to a column(s) preserving the grid's filter (if applied), use the MergeColumnFilters method.

See Also

DataControlBase.GetColumnFilterCriteria Overload List

Returns a filter applied to the specified column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function GetColumnFilterCriteria(
   ByVal fieldName As String
) As CriteriaOperator
```
C#

© 2018 Developer Express Inc.

```
public CriteriaOperator GetColumnFilterCriteria(
   string fieldName
)
```

Parameters
fieldName
A System.String value that specifies the column's field name.

Return Value

A CriteriaOperator object that represents filter criteria applied to the specified column. **null**, if data isn't filtered by the values of the specified column.

Remarks

To specify the grid's filter, use the FilterCriteria or FilterString property. To apply a filter to a column(s) preserving the grid's filter (if applied), use the MergeColumnFilters method.

DataControlBase.GetColumnFilterString Overload List

Returns a filter expression applied to the specified column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function GetColumnFilterString(
   ByVal fieldName As String
) As String
```
C#
```
public string GetColumnFilterString(
   string fieldName
)
```

Parameters
fieldName
A System.String value that specifies the column's field name.

Return Value

A System.String value that specifies the specified column's filter expression.

Remarks

To specify the grid's overall filter expression, use the FilterCriteria or FilterString property. To apply a filter to a column(s) preserving the grid's filter (if applied), use the MergeColumnFilters method.

The ClearColumnFilter method clears the required column's filter.

)
```

Parameters

column
A ColumnBase descendant that represents the column.

Return Value

A System.String value that specifies the specified column's filter expression.

Remarks

To specify the grid's overall filter expression, use the FilterCriteria or FilterString property. To apply a filter to a column(s) preserving the grid's filter (if applied), use the MergeColumnFilters method.

The ClearColumnFilter method clears the required column's filter.

GetCurrentGrid Method

Gets the value of the CurrentGrid attached property for a specified Windows.UI.Xaml.DependencyObject.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
static Public Function GetCurrentGrid(
   ByVal element As DependencyObject
) As DataControlBase
```
C#
```
public static DataControlBase GetCurrentGrid(
   DependencyObject element
)
```

Parameters
element
The element from which the property value is read.

Return Value

The CurrentGrid property value for the element.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace

GetCurrentViewChangedListener Method

Gets the value of the CurrentViewChangedListener attached property for a specified Windows.UI.Xaml.DependencyObject.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic

```
static Public Function GetCurrentViewChangedListener(
   ByVal element As DependencyObject
) As INotifyCurrentViewChanged
```

C#

```
public static INotifyCurrentViewChanged GetCurrentViewChangedListener(
   DependencyObject element
)
```

Parameters
element
The element from which the property value is read.

Return Value

The DevExpress.UI.Xaml.Grid.INotifyCurrentViewChanged value.

GetRowElementByRowHandle Method

Returns a UI element that is the specified row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetRowElementByRowHandle(
   ByVal rowHandle As Integer
) As FrameworkElement
```

C#

```
public FrameworkElement GetRowElementByRowHandle(
   int rowHandle
)
```

Parameters

rowHandle
An integer value that specifies the row's handle.

Return Value

A Windows.UI.Xaml.FrameworkElement descendant that is the specified row.

See Also

GetRowState Method

This member supports the internal infrastructure and is not intended to be used directly from your code.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetRowState(
   ByVal rowHandle As Integer
) As DependencyObject
```

C#

```
public DependencyObject GetRowState(
   int rowHandle
)
```

Parameters

rowHandle

Return Value

See Also

GetSelectedCells Method

Returns the selected data cells.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetSelectedCells() As IList(of GridCell)
```

C#

```
public IList<GridCell> GetSelectedCells()
```

Return Value

The list of GridCell objects that contain cell coordinates (row and column).

Remarks

If multiple cell selection is disabled or there aren't any selected cells, the **GetSelectedCells** method returns an empty list. To enable block selection, set the NavigationStyle property to GridControlNavigationStyle.Cell and set the SelectionMode property to MultiSelectMode.Cell.

GetTotalSummaryValue Method

Returns the value of the specified total summary item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic

```
Public Function GetTotalSummaryValue(
   ByVal item As SummaryItemBase
) As Object
```

C#

```
public object GetTotalSummaryValue(
   SummaryItemBase item
)
```

Parameters
item
A SummaryItemBase descendant that represents the total summary item.

Return Value

Returns the value of the specified total summary item.

Remarks

Total summary items are stored within the grid's GridControl.TotalSummary collection.

HideEditor Method

Closes the active editor, discarding all the changes made.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub HideEditor()
```
C#
```
public void HideEditor()
```

Remarks

To learn more, see Showing and Hiding Editors.

IsCellSelected Method

Indicates whether the specified cell is selected.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function IsCellSelected(
   ByVal rowHandle As Integer,
   ByVal column As ColumnBase
) As Boolean
```

C#

```
public bool IsCellSelected(
   int rowHandle,
   ColumnBase column
)
```

Parameters

rowHandle
An integer value that specifies the row's handle.
column
A ColumnBase descendant that represents the column which contains the cell.

Return Value

true if the specified cell is selected; otherwise, **false**.

IsItemSelected Method

Indicates whether the specified item is selected.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function IsItemSelected(
   ByVal itemHandle As Integer
) As Boolean
```

C#

```
public bool IsItemSelected(
   int itemHandle
)
```

Parameters

itemHandle
An integer value that identifies the item.

Return Value

true if the specified item is selected; otherwise, **false**.

DataControlBase.MergeColumnFilters Overload List

Combines the specified filter with the grid's current filter with the AND operator.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub MergeColumnFilters(
   ByVal filterCriteria As CriteriaOperator
)
```
C#
```
public void MergeColumnFilters(
   CriteriaOperator filterCriteria
)
```

Parameters
filterCriteria
A CriteriaOperator descendant that represents the filter expression.

Remarks

Use the **MergeColumnFilters** method to apply a filter to individual columns without resetting the existing filter.

See Also
DataControlBase Class
DataControlBase Members

FilterCriteria

Combines the specified filter with the grid's current filter with the AND operator.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub MergeColumnFilters(
   ByVal filterString As String
)
```
C#
```
public void MergeColumnFilters(
   string filterString
)
```

© 2018 Developer Express Inc.

Parameters
filterString
A System.String value that represents the filter expression.

Remarks

Use the **MergeColumnFilters** method to apply a filter to individual columns without resetting the existing filter.

MoveColumnTo Method

Moves the specified column to the specified position.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub MoveColumnTo(
   ByVal source As ColumnBase,
   ByVal newVisibleIndex As Integer
)
```

C#

```
public void MoveColumnTo(
   ColumnBase source,
   int newVisibleIndex
)
```

Parameters

source
A ColumnBase object that represents the source column.
newVisibleIndex
An integer value that specifies the column's new position among the columns displayed within the destination area.

MoveFirstRow Method

Moves focus to the first visible row within a grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overridable Public Sub MoveFirstRow()
```

C#

```
public virtual void MoveFirstRow()
```

Remarks

To use the **MoveFirstRow** method, the NavigationStyle property should be set to GridControlNavigationStyle.Row or GridControlNavigationStyle.Cell.

To scroll the grid without moving focus, use the GridControl.ScrollIntoView method.

© 2018 Developer Express Inc.

MoveLastRow Method

Moves focus to the last visible row within a grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overridable Public Sub MoveLastRow()
```

C#

```
public virtual void MoveLastRow()
```

Remarks

To use the **MoveLastRow** method, the NavigationStyle property should be set to GridControlNavigationStyle.Row or GridControlNavigationStyle.Cell.

To scroll the grid without moving focus, use the GridControl.ScrollIntoView method.

MoveNextPage Method

Moves focus forward to the bottom row displayed onscreen within a grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overridable Public Sub MoveNextPage()
```

C#

```
public virtual void MoveNextPage()
```

Remarks

To use the **MoveNextPage** method, the NavigationStyle property should be set to GridControlNavigationStyle.Row or GridControlNavigationStyle.Cell.

To scroll the grid without moving focus, use the GridControl.ScrollIntoView method.

MoveNextRow Method

Moves focus to the row following the one currently focused.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overridable Public Sub MoveNextRow()
```

C#

```
public virtual void MoveNextRow()
```

Remarks

To use the **MoveNextRow** method, the NavigationStyle property should be set to GridControlNavigationStyle.Row or GridControlNavigationStyle.Cell.

To scroll the grid without moving focus, use the GridControl.ScrollIntoView method.

MovePrevPage Method

Moves focus backward to the top row displayed onscreen within a grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overridable Public Sub MovePrevPage()
```

C#

```
public virtual void MovePrevPage()
```

Remarks

To use the **MovePrevPage** method, the NavigationStyle property should be set to GridControlNavigationStyle.Row or GridControlNavigationStyle.Cell.

To scroll the grid without moving focus, use the GridControl.ScrollIntoView method.

MovePrevRow Method

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overridable Public Sub MovePrevRow(
   ByVal allowNavigateToAutoFilterRow As Boolean
)
```

C#

```
public virtual void MovePrevRow(
   bool allowNavigateToAutoFilterRow
)
```

Parameters

allowNavigateToAutoFilterRow

See Also

DataControlBase Class
DataControlBase Members

MoveSelectedItem Method

Selects the specified item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub MoveSelectedItem(
   ByVal visibleIndex As Integer
)
```

C#

```
public void MoveSelectedItem(
   int visibleIndex
)
```

Parameters

visibleIndex
An integer value that specifies the item's position within a grid.

Remarks

To use the **MoveSelectedItem** method, the NavigationStyle property should be set to GridControlNavigationStyle.Row.

Use the GridControl.GetRowVisibleIndexByHandle method to obtain an item's visible index by its handle.

See Also

DataControlBase Class
DataControlBase Members

PopulateColumns Method

Creates columns for all fields in a bound data source.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub PopulateColumns()
```

C#

```
public void PopulateColumns()
```

Remarks

The **PopulateColumns** method appends the grid's GridControl.Columns collection with columns that correspond to all fields in a data source.

This method is automatically called after the grid has been bound to a data source if its AutoGenerateColumns property is set to **true**.

Calling the **PopulateColumns** method raises the ColumnsPopulated event.

ColumnsPopulated

© 2018 Developer Express Inc.

PostEditor Method

Saves the active editor's value to a data source without closing the editor.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub PostEditor()
```

C#

```
public void PostEditor()
```

Remarks

Before the active editor's new value is posted to a data source, it is validated. If a new value is valid, it is posted to a data source and the editor can be closed. If a new value is invalid, the value isn't posted to a data source, and the editor cannot be closed until its value is corrected.

After the editor is displayed, it can be obtained using the ActiveEditor property.

To learn more, see Showing and Hiding Editors.

RefreshData Method

Updates the control data.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub RefreshData()
```
C#
```
public void RefreshData()
```

Remarks

Calling the **RefreshData** method only makes sense when the bound data source does not provide data change notifications.

ScrollIntoView Method

Makes the specified row visible onscreen.

Overload List

Name	Description
void ScrollIntoView(int rowHandle)	Makes the specified row visible onscreen.
void ScrollIntoView(object row)	Makes the specified row visible onscreen.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
DataControlBase.ScrollIntoView Overload List

Makes the specified row visible onscreen.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Overridable Public Sub ScrollIntoView(
   ByVal rowHandle As Integer
)
```
C#
```
public virtual void ScrollIntoView(
   int rowHandle
)
```

Parameters
rowHandle
An integer value that specifies the row's handle.

Remarks

Note
The **ScrollIntoView** method does not move focus to the specified row.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
DataControlBase.ScrollIntoView Overload List

Makes the specified row visible onscreen.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub ScrollIntoView(
   ByVal row As Object
)
```
C#
```
public void ScrollIntoView(
   object row
)
```

Parameters

© 2018 Developer Express Inc.

row
A data object that corresponds to the required row.

Remarks

Note	
The **ScrollIntoView** method does not move focus to the specified row.

SelectAll Method

Selects all items within a grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub SelectAll()
```

C#

```
public void SelectAll()
```

Remarks

To clear the current selection, use the UnselectAll method. To select or deselect individual items, use the SelectItem and UnselectItem methods, respectively.

SelectCell Method

Selects the cell.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub SelectCell(
   ByVal rowHandle As Integer,
   ByVal column As GridColumnBase
)
```

C#

```
public void SelectCell(
   int rowHandle,
   GridColumnBase column
)
```

Parameters

rowHandle
An integer value that specifies the handle of the row where the cell is located.
column
A GridColumnBase object that represents the column which contains the cell.

Remarks

Use the **SelectCell** method to select a cell, adding it to the existing selection (if any). A cell is located at the intersection of the specified row and column.

The **SelectCell** method does nothing if the NavigationStyle property isn't set to GridControlNavigationStyle.Cell and/or the SelectionMode property isn't set to MultiSelectMode.Cell.

To select multiple cells, use the SelectCells method.

SelectCells Method

Selects multiple cells.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub SelectCells(
   ByVal startRowHandle As Integer,
   ByVal startColumn As GridColumnBase,
   ByVal endRowHandle As Integer,
   ByVal endColumn As GridColumnBase
)
```

C#

```
public void SelectCells(
   int startRowHandle,
   GridColumnBase startColumn,
   int endRowHandle,
   GridColumnBase endColumn
)
```

Parameters

startRowHandle
An integer value that specifies the handle of the row containing the cell that identifies the starting point of the selection.
startColumn
A GridColumnBase object that represents the column containing the cell that identifies the starting point of the selection.
endRowHandle
An integer value that specifies the handle of the row containing the cell that identifies the end point of the selection.
endColumn
A GridColumnBase object that represents the column containing the cell that identifies the ending point of the selection.

Remarks

The **SelectCells** method allows you to select multiple cells, adding them to the existing selection (if any). In this case, the method's parameters determine the block's starting and ending edges, respectively.

The **SelectCells** method does nothing if the NavigationStyle property isn't set to GridControlNavigationStyle.Cell and/or the SelectionMode property isn't set to MultiSelectMode.Cell.

To select a single cell, use the SelectCell method.

SelectItem Method

Selects the specified item.

Overload List

Name	Description
void SelectItem(object item)	Selects the specified item.
void SelectItem(int itemHandle)	Selects the specified item.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
DataControlBase.SelectItem Overload List

Selects the specified item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub SelectItem(
   ByVal item As Object
)
```
C#
```
public void SelectItem(
   object item
)
```

Parameters
item
An object that is the item to select.

Remarks

The **SelectItem** method allows you to select the required item while preserving the current selection (if any). If the specified item is hidden within a collapsed group, the **SelectItem** method does nothing.

To unselect an item, use the UnselectItem method. To clear the current selection, use the UnselectItem method.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
DataControlBase.SelectItem Overload List
UnselectItem

Selects the specified item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub SelectItem(
   ByVal itemHandle As Integer
)
```
C#
```
public void SelectItem(
   int itemHandle
)
```

© 2018 Developer Express Inc.

Parameters
itemHandle
An integer value which specifies the handle of the item to select.

Remarks

The **SelectItem** method allows you to select the required item while preserving the current selection. If the specified item is hidden within a collapsed group, the **SelectItem** method does nothing.

To unselect an item, use the UnselectItem method. To clear the current selection, use the UnselectAll method.

UnselectItem
UnselectAll

© 2018 Developer Express Inc.

SelectRange Method

Selects multiple items, while preserving the current selection (if any).

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub SelectRange(
   ByVal startItemHandle As Integer,
   ByVal endItemHandle As Integer
)
```

C#

```
public void SelectRange(
   int startItemHandle,
   int endItemHandle
)
```

Parameters

startItemHandle
An integer value specifying the item handle at which the selection starts.
endItemHandle
An integer value specifying the item handle at which the selection ends.

Remarks

The **SelectRange** method adds the specified range of data rows/cards to the current selection. To clear the current selection before selecting, call the UnselectAll method.

The **SelectRange** method does nothing in the cases listed below:

- Multiple item selection isn't allowed.
- The specified item handles are invalid.
- The specified item handles point to hidden items that reside within collapsed groups.

SetCurrentGrid Method

Sets the value of the CurrentGrid attached property to a specified Windows.UI.Xaml.DependencyObject.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic

```
static Public Sub SetCurrentGrid(
   ByVal element As DependencyObject,
   ByVal value As DataControlBase
)
```

C#

```
public static void SetCurrentGrid(
   DependencyObject element,
   DataControlBase value
)
```

Parameters
element
The element to which the attached property is written.
value
The required DataControlBase value.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace

© 2018 Developer Express Inc.

SetCurrentViewChangedListener Method

Sets the value of the CurrentViewChangedListener attached property to a specified Windows.UI.Xaml.DependencyObject.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
static Public Sub SetCurrentViewChangedListener(
   ByVal element As DependencyObject,
   ByVal value As INotifyCurrentViewChanged
)
```
C#
```
public static void SetCurrentViewChangedListener(
   DependencyObject element,
   INotifyCurrentViewChanged value
)
```

Parameters
element
The element to which the attached property is written.
value
The DevExpress.UI.Xaml.Grid.INotifyCurrentViewChanged value.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace

ShowEditor Method

Activates the focused cell's inplace editor.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub ShowEditor()
```
C#
```
public void ShowEditor()
```

Remarks

Cell editors can be activated if the grid's AllowEditing property is set to **true** and the NavigationStyle property is set to GridControlNavigationStyle.Cell.

To programmatically activate the cell's editor, you should focus the cell and call the **ShowEditor** method.

After the editor is displayed, it can be obtained using the ActiveEditor property.

To learn more, see Showing and Hiding Editors.

SortBy Method

Sorts data by the values of the specified column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub SortBy(
   ByVal fieldName As String
)
```

C#

```
public void SortBy(
   string fieldName
)
```

Parameters

fieldName
A System.String value that specifies the column's field name.

Remarks

The Grid Control allows data sorting by multiple columns. Any previous sorting is not cleared when calling the **SortBy** method.

If the grid's data isn't sorted by the specified column, the **SortBy** method sorts data by its values in ascending order. The new sort order applies an additional sorting condition to the one previously applied.

End-users are allowed to sort data if the grid's AllowSorting property is set to **true**.

ColumnBase.SortIndex
ClearSorting

© 2018 Developer Express Inc.

UnselectAll Method

Unselects any selected items within a grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub UnselectAll()
```

C#

```
public void UnselectAll()
```

Remarks

Multiple row/card selection isn't allowed if the NavigationStyle property is set to GridControlNavigationStyle.None and the SelectionMode property is set to 'None'.

The **UnselectAll** method clears the current selection (clears the SelectedItems collection). To select all items, use the SelectAll method. To select or unselect individual rows/cards, use the SelectItem and UnselectItem methods, respectively.

UnselectCell Method

Unselects the specified cell.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub UnselectCell(
   ByVal rowHandle As Integer,
   ByVal column As GridColumnBase
)
```

C#

```
public void UnselectCell(
   int rowHandle,
   GridColumnBase column
)
```

Parameters

rowHandle
An integer value that specifies the handle of the row, containing the cell.
column
A GridColumnBase object that represents the column, containing the cell.

Remarks

Use the **UnselectCell** method to unselect individual cells, preserving the existing selection (if any). To select a cell, use the SelectCell method.

UnselectCells Method

Unselects the specified cells.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub UnselectCells(
   ByVal startRowHandle As Integer,
   ByVal startColumn As GridColumnBase,
   ByVal endRowHandle As Integer,
   ByVal endColumn As GridColumnBase
)
```

C#

```
public void UnselectCells(
   int startRowHandle,
   GridColumnBase startColumn,
   int endRowHandle,
   GridColumnBase endColumn
)
```

Parameters

startRowHandle
An integer value that specifies the handle of the row containing the cell that identifies the starting point of the selection.
startColumn
A GridColumnBase object that is the column containing the cell that identifies the starting point of the selection.
endRowHandle
An integer value that specifies the handle of the row containing the cell that identifies the end point of the selection.
endColumn
A GridColumnBase object that is the column containing the cell that identifies the end point of the selection.

Remarks

The **UnselectCells** method unselects the specified block of cells. Individual cells can be unselected using the UnselectCell method.

UnselectItem Method

Unselects the specified item.

Overload List

Name	Description
void UnselectItem(object item)	Unselects the specified item.
void UnselectItem(int itemHandle)	Unselects the specified item.

See Also
DataControlBase Class
DataControlBase Members
DevExpress.UI.Xaml.Grid Namespace
DataControlBase.UnselectItem Overload List

Unselects the specified item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub UnselectItem(
   ByVal item As Object
)
```
C#
```
public void UnselectItem(
   object item
)
```

Parameters
item
An object that is the item to unselect.

Remarks

The **UnselectItem** method allows you to unselect the required item preserving the current selection (if any). To select an item, use the SelectItem method.

To clear the current selection, use the UnselectAll method. To select all items, use the SelectAll method.

DevExpress.UI.Xaml.Grid Namespace
DataControlBase.UnselectItem Overload List
UnselectAll
SelectItem
SelectAll

Unselects the specified item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub UnselectItem(
   ByVal itemHandle As Integer
)
```
C#

© 2018 Developer Express Inc.

```
public void UnselectItem(
   int itemHandle
)
```

Parameters
itemHandle
An integer value identifying the data item by its handle.

Remarks

The **UnselectItem** method allows you to unselect the required item preserving the current selection. To select an item, use the SelectItem method.

To clear the current selection, use the UnselectAll method. To select all items, use the SelectAll method.

UpdateTotalSummary Method

Updates total summaries.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub UpdateTotalSummary()
```

C#

```
public void UpdateTotalSummary()
```

Remarks

The **UpdateTotalSummary** method can be used to force a recalculation of summary values. When a custom aggregate function is implemented using the GridControl.CustomSummary event, summary values may not solely depend on the data displayed by the grid. If summaries depend on external data, you should call the **UpdateTotalSummary** method each time this external data is changed.

UpdateUnboundColumnValues Method

Updates unbound column values in the specified row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic

```
Public Sub UpdateUnboundColumnValues(
   ByVal rowHandle As Integer
)
```

C#

```
public void UpdateUnboundColumnValues(
   int rowHandle
)
```

Parameters
rowHandle
An integer value which identifies the row.

ExceptionMode Enumeration

Lists values that specify how an exception should be handled.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Enum ExceptionMode
```
C#
```
public enum ExceptionMode
```

Members

Name	Description
DisplayError	Displays a message box, with an error description specified by the InvalidRowExceptionEventArgs.ErrorText property. The message box's caption can be specified using the InvalidRowExceptionEventArgs.WindowCaption property.
Ignore	An exception is ignored.
NoAction	Displays an error icon and allows an end-user to correct or reset an invalid value.
ThrowException	Throws an exception specified by the InvalidRowExceptionEventArgs.Exception property.

Remarks

The values listed by this enumeration are used to set the InvalidRowExceptionEventArgs.ExceptionMode property's value.

FilterPopupMode Enumeration

Lists values that specify the display mode of a column's filter dropdown.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Enum FilterPopupMode
```
C#
```
public enum FilterPopupMode
```

Members

Name	Description
Custom	A filter dropdown is represented by a custom template assigned to the ColumnBase.CustomColumnFilterPopupTemplate property.
Date	A date-time filter dropdown with a set of predefined values.
DateAlt	A date-time filter dropdown with an alternative set of predefined values.
DateCompact	A date-time filter dropdown without predefined values.
DateSmart	A date-time filter dropdown with a set of predefined values that is based on the column's data.
Default	A filter dropdown is represented as a regular list of items (one item at a time can be selected).
List	A filter dropdown is represented as a checked list.

Remarks

The values listed by this enumeration are used to set the ColumnBase.FilterPopupMode property.

FindMode Enumeration

Lists values that specify when data searching starts.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Enum FindMode
```

C#

```
public enum FindMode
```

Members

Name	Description
Always	A control starts searching data automatically, after a small delay.
FindOnEnter	A control starts searching data on pressing ENTER.

Remarks

The values listed by this enumeration are used to set the DataControlBase.SearchPanelFindMode property.

GridCell Class

Represents an object which corresponds to a data cell.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridCell Inherits CellBase
```

C#

```
public class GridCell : CellBase
```

Remarks

A cell is located at the intersection of a row and column. The **GridCell** class provides two properties which identify a cell. The RowHandle property specifies the handle of the row which contains the cell. The Column property represents the column in which the cell resides.

GridCell Constructor

Initializes a new instance of the GridCell class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New(
   ByVal rowHandle As Integer,
   ByVal column As GridColumnBase
)
```
C#
```
public GridCell(
   int rowHandle,
   GridColumnBase column
)
```

Parameters
rowHandle
An integer value that specifies the handle of the row which owns the cell. This value is assigned to the RowHandle property.
column
A GridColumnBase object that represents the column which contains the cell. This value is assigned to the Column property.

Column Property

Gets the column which contains the cell.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Column As GridColumnBase
```

C#

```
public GridColumnBase Column { get; }
```

Property Value

A GridColumnBase object that represents the column which contains the cell.

RowHandle Property

Gets the handle of the row which owns the cell.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property RowHandle As Integer
```

C#

```
public int RowHandle { get; }
```

Property Value

An integer value that specifies the handle of the row which owns the cell.

GridCheckBoxColumn Class

Represents a column with Boolean values.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridCheckBoxColumn Inherits GridColumnBase, IDetailElement(of ColumnBase)
```

C#

```
public class GridCheckBoxColumn : GridColumnBase, IDetailElement<ColumnBase>
```

Remarks

There are five column types used to present specific data types (Boolean, Date-Time, Numeric, Lists and Text), one column type that provides masking capabilities for text values, and one column type for custom data presentation via templates. Cell values are edited using data editors. Each column type stores specific settings responsible for the data editor's functionality. A cell's editor is created when an end-user starts to edit the cell's value and is automatically destroyed when editing is completed. This dramatically increases the application's performance.

Use the IsThreeState property to specify whether the check editor supports three states (checked, unchecked and indeterminate).

To learn more, see Data Editing.

GridCheckBoxColumn Members

Represents a column with Boolean values.

The following tables list the members exposed by the GridCheckBoxColumn type.

Public Constructors

	Name	Description
	GridCheckBoxColumn	Initializes a new instance of the GridCheckBoxColumn class.

Public Properties

	Name	Description
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on

© 2018 Developer Express Inc.

		custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)

© 2018 Developer Express Inc.

	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a dependency property. (Inherited from **ColumnBase**)
	ClickMode	Gets or sets a value that specifies when the editor's state changes in

© 2018 Developer Express Inc.

		response to end-user manipulations. This is a dependency property.
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsThreeState	Gets or sets whether the check editor supports three states (checked, unchecked and indeterminate).
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

GridCheckBoxColumn Constructor

Initializes a new instance of the GridCheckBoxColumn class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public GridCheckBoxColumn()
```

GridCheckBoxColumn Properties

Represents a column with Boolean values.

The following tables list the members exposed by the GridCheckBoxColumn type.

Public Constructors

	Name	Description
	GridCheckBoxColumn	Initializes a new instance of the GridCheckBoxColumn class.

Public Properties

	Name	Description
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on

© 2018 Developer Express Inc.

		custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)

© 2018 Developer Express Inc.

	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a dependency property. (Inherited from **ColumnBase**)
	ClickMode	Gets or sets a value that specifies when the editor's state changes in

© 2018 Developer Express Inc.

		response to end-user manipulations. This is a dependency property.
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsThreeState	Gets or sets whether the check editor supports three states (checked, unchecked and indeterminate).
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

S	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
S	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
S	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
S	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
S	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description

ClickMode Property

Gets or sets a value that specifies when the editor's state changes in response to end-user manipulations. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ClickMode As ClickMode
```

C#

```
public ClickMode ClickMode { get; set; }
```

Property Value

One of the Windows.UI.Xaml.Controls.ClickMode enumeration values.

See Also

IsThreeState Property

Gets or sets whether the check editor supports three states (checked, unchecked and indeterminate).

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property IsThreeState As Boolean
```

C#

```
public bool IsThreeState { get; set; }
```

Property Value

true if the editor supports three states; **false** if the editor supports two states (checked and unchecked).

Remarks

A check editor supports three states (checked, unchecked and indeterminate) if its **IsThreeState** property is set to **true**.If this property is set to **false**, only the checked and unchecked states are supported.

GridColumnBase Class

Serves as a base for classes that represent grid columns.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridColumnBase Inherits ColumnBase
```

C#

```
public abstract class GridColumnBase : ColumnBase
```

Remarks

To learn more, see Data Editing.

GridColumnBase Members

Serves as a base for classes that represent grid columns.

The following tables list the members exposed by the GridColumnBase type.

Public Properties

	Name	Description
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property.
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property.
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property.
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property.
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property.
	GroupIndex	Gets or sets the column's position among grouping columns.
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property.
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property.
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property.
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited

© 2018 Developer Express Inc.

		from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property.
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
S	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
S	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
S	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
S	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description
	AddHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)

S	ActualHeaderToolTipTemplateProperty	Identifies the ActualHeaderToolTipTemplate dependency property. (Inherited from **ColumnBase**)
S	ActualHeaderToolTipTemplatePropertyKey	Identifies the dependency property. (Inherited from **ColumnBase**)
S	ActualHeaderWidthProperty	Identifies the ActualHeaderWidth dependency property. (Inherited from **ColumnBase**)
S	ActualTotalSummaryContentStyleProperty	Identifies the ActualTotalSummaryContentStyle dependency property. (Inherited from **ColumnBase**)
S	ActualWidthProperty	Identifies the ActualWidth dependency property. (Inherited from **ColumnBase**)
S	AllowAutoFilterProperty	Identifies the AllowAutoFilter dependency property. (Inherited from **ColumnBase**)
S	AllowColumnFilteringProperty	Identifies the AllowColumnFiltering dependency property. (Inherited from **ColumnBase**)
S	AllowEditingProperty	Identifies the AllowEditing dependency property. (Inherited from **ColumnBase**)
S	AllowFocusProperty	Identifies the AllowFocus dependency property. (Inherited from **ColumnBase**)
S	AllowGroupingProperty	Identifies the AllowGrouping dependency property.
S	AllowMovingProperty	Identifies the AllowMoving dependency property. (Inherited from **ColumnBase**)
S	AllowResizingProperty	Identifies the AllowResizing dependency property. (Inherited from **ColumnBase**)
S	AllowSearchPanelProperty	Identifies the AllowSearchPanel dependency property. (Inherited from **ColumnBase**)
S	AllowSortingProperty	Identifies the AllowSorting dependency property. (Inherited from **ColumnBase**)
S	AutoFilterConditionProperty	Identifies the AutoFilterCondition dependency property. (Inherited from **ColumnBase**)
S	AutoFilterCriteriaProperty	Identifies the AutoFilterCriteria dependency property. (Inherited from **ColumnBase**)
S	AutoFilterEditorStyleProperty	Identifies the AutoFilterEditorStyle dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

S	AutoFilterValueProperty	Identifies the AutoFilterValue dependency property. (Inherited from **ColumnBase**)
S	CellStyleProperty	Identifies the CellStyle dependency property. (Inherited from **ColumnBase**)
S	ColumnChooserHeaderCaptionProperty	Identifies the ColumnChooserHeaderCaption dependency property. (Inherited from **ColumnBase**)
S	ColumnPositionProperty	Identifies the ColumnPosition dependency property. (Inherited from **ColumnBase**)
S	CustomColumnFilterPopupTemplateProperty	Identifies the CustomColumnFilterPopupTemplate dependency property. (Inherited from **ColumnBase**)
S	FieldNameProperty	Identifies the FieldName dependency property. (Inherited from **ColumnBase**)
S	FieldTypeProperty	Identifies the FieldType dependency property. (Inherited from **ColumnBase**)
S	FilterPopupModeProperty	Identifies the FilterPopupMode dependency property. (Inherited from **ColumnBase**)
S	FixedWidthProperty	Identifies the FixedWidth dependency property. (Inherited from **ColumnBase**)
S	GroupColumnSummaryContentStyleProperty	Identifies the GroupColumnSummaryContentStyle dependency property.
S	GroupColumnSummaryItemTemplateProperty	Identifies the GroupColumnSummaryItemTemplate dependency property.
S	GroupIndexProperty	Identifies the GroupIndex dependency property.
S	GroupIntervalProperty	Identifies the GroupInterval dependency property.
S	GroupValueTemplateProperty	Identifies the GroupValueTemplate dependency property.
S	GroupValueTemplateSelectorProperty	Identifies the GroupValueTemplateSelector dependency property.
S	HasLeftSiblingProperty	Identifies the HasLeftSibling dependency property. (Inherited from **ColumnBase**)
S	HasRightSiblingProperty	Identifies the HasRightSibling dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

S	HasTotalSummariesProperty	Identifies the HasTotalSummaries dependency property. (Inherited from **ColumnBase**)
S	HeaderCaptionProperty	Identifies the HeaderCaption dependency property. (Inherited from **ColumnBase**)
S	HeaderProperty	Identifies the Header dependency property. (Inherited from **ColumnBase**)
S	HeaderStyleProperty	Identifies the HeaderStyle dependency property. (Inherited from **ColumnBase**)
S	HeaderTemplateProperty	Identifies the HeaderTemplate dependency property. (Inherited from **ColumnBase**)
S	HeaderTemplateSelectorProperty	Identifies the HeaderTemplateSelector dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipProperty	Identifies the HeaderToolTip dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipTemplateProperty	Identifies the HeaderToolTipTemplate dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipVisibilityPropertyKey	(Inherited from **ColumnBase**)
S	HorizontalContentAlignmentProperty	Identifies the HorizontalContentAlignment dependency property. (Inherited from **ColumnBase**)
S	HorizontalHeaderContentAlignmentProperty	Identifies the HorizontalHeaderContentAlignment dependency property. (Inherited from **ColumnBase**)
S	ImmediateUpdateAutoFilterProperty	Identifies the ImmediateUpdateAutoFilter dependency property. (Inherited from **ColumnBase**)
S	ImmediateUpdateColumnFilterProperty	Identifies the ImmediateUpdateColumnFilter dependency property. (Inherited from **ColumnBase**)
S	IsFirstProperty	Identifies the IsFirst dependency property. (Inherited from **ColumnBase**)
S	IsGroupedProperty	Identifies the IsGrouped dependency property.
S	IsLastProperty	Identifies the IsLast dependency property. (Inherited from **ColumnBase**)
S	IsSortedBySummaryProperty	Identifies the IsSortedBySummary dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

S	IsSortedProperty	Identifies the IsSorted dependency property. (Inherited from **ColumnBase**)
S	MaxWidthProperty	Identifies the MaxWidth dependency property. (Inherited from **ColumnBase**)
S	MinWidthProperty	Identifies the MinWidth dependency property. (Inherited from **ColumnBase**)
S	RoundDateTimeForColumnFilterProperty	(Inherited from **ColumnBase**)
S	ShowCriteriaInAutoFilterRowProperty	Identifies the ShowCriteriaInAutoFilterRow dependency property. (Inherited from **ColumnBase**)
S	ShowEmptyDateFilterProperty	Identifies the ShowEmptyDateFilter dependency property. (Inherited from **ColumnBase**)
S	ShowInColumnChooserProperty	Identifies the ShowInColumnChooser dependency property. (Inherited from **ColumnBase**)
S	ShowValidationAttributeErrorsProperty	Identifies the ShowValidationAttributeErrors dependency property. (Inherited from **ColumnBase**)
S	SortIndexProperty	Identifies the SortIndex dependency property. (Inherited from **ColumnBase**)
S	SortModeProperty	Identifies the SortMode dependency property. (Inherited from **ColumnBase**)
S	SortOrderProperty	Identifies the SortOrder dependency property. (Inherited from **ColumnBase**)
S	TabStopProperty	Identifies the TabStop dependency property. (Inherited from **ColumnBase**)
S	TotalSummaryContentStyleProperty	Identifies the TotalSummaryContentStyle dependency property. (Inherited from **ColumnBase**)
S	TotalSummaryTextProperty	Identifies the TotalSummaryText dependency property. (Inherited from **ColumnBase**)
S	UnboundExpressionProperty	Identifies the UnboundExpression dependency property. (Inherited from **ColumnBase**)
S	UnboundTypeProperty	Identifies the UnboundType dependency property. (Inherited from **ColumnBase**)
S	VerticalContentAlignmentProperty	Identifies the VerticalContentAlignment dependency property. (Inherited from

GridColumnBase Properties

Serves as a base for classes that represent grid columns.

The following tables list the members exposed by the GridColumnBase type.

Public Properties

	Name	Description
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property.
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property.
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property.
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property.
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property.
	GroupIndex	Gets or sets the column's position among grouping columns.
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property.
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property.
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property.
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited

© 2018 Developer Express Inc.

		from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property.
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

S	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

ActualAllowGrouping Property

Gets whether an end-user can group data by the current column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualAllowGrouping As Boolean
```

C#

```
public bool ActualAllowGrouping { get; }
```

Property Value

true if an end-user can group data by the current column; otherwise, **false**.

Remarks

If the column's AllowGrouping property is set to 'Default', its availability in data grouping is specified by the grid's GridControlBase.AllowGrouping property. In this instance, to determine whether an end-user can actually group data by this column, use the **ActualAllowGrouping** property.

To learn more, see Grouping.

Note
Data grouping requires data sorting to be performed. End-users can group data only if data sorting is allowed.

ActualGroupValueTemplateSelector Property

Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualGroupValueTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ActualGroupValueTemplateSelector { get; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

AllowGrouping Property

Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowGrouping As DefaultBoolean
```

C#

```
public DefaultBoolean AllowGrouping { get; set; }
```

Property Value

A DefaultBoolean enumeration value that specifies whether an end-user can group data by the current column.

Remarks

End-users are allowed to group data if the grid's GridControlBase.AllowGrouping property is set to **true**. Individual columns provide the **AllowGrouping** property, allowing the default behavior specified by the grid, to be overridden. Setting this property to 'True' or 'False' overrides the default behavior. This can be useful when it is required to prevent an end-user from grouping data by values of specific columns.

If the **AllowGrouping** property is set to 'Default', the ability to group data is controlled by the grid's GridControlBase.AllowGrouping property. In this instance, to obtain whether an end-user can group data by the current column, use the ActualAllowGrouping property.

To learn more, see Grouping.

Note
Data grouping requires data sorting to be performed. End-users can group data only if data sorting is allowed.

GroupColumnSummaryContentStyle Property

Gets or sets the style applied to group summary items aligned by columns. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupColumnSummaryContentStyle As Style
```

C#

```
public Style GroupColumnSummaryContentStyle { get; set; }
```

Property Value

The style applied to group summary items aligned by columns.

Remarks

The position of group summaries within a group row is specified by theGridControl.GroupSummaryDisplayMode property. If this property is set to GroupSummaryDisplayMode.AlignByColumns, group summaries are displayed under the corresponding columns.

See Also

GroupColumnSummaryItemTemplate Property

Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupColumnSummaryItemTemplate As DataTemplate
```

C#

```
public DataTemplate GroupColumnSummaryItemTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of group summary items aligned by columns.

Remarks

The position of group summaries within a group row is specified by theGridControl.GroupSummaryDisplayMode property. If this property is set to GroupSummaryDisplayMode.AlignByColumns, group summaries are displayed under the corresponding columns.

GroupIndex Property

Gets or sets the column's position among grouping columns.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupIndex As Integer
```

C#

```
public int GroupIndex { get; set; }
```

Property Value

An integer value that specifies the column's position among grouping columns. **-1** if the grid isn't grouped by the values of this column.

See Also

GroupInterval Property

Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupInterval As ColumnGroupInterval
```

C#

```
public ColumnGroupInterval GroupInterval { get; set; }
```

Property Value

A DevExpress.XtraGrid.ColumnGroupInterval enumeration value that specifies how data rows are grouped. The default is **ColumnGroupInterval.Default**.

Remarks

The **Interval Grouping** feature allows you to change the default logic, especially for columns that contain date/time values. For example, data rows can be arranged by the month or year part of a date/time value, while text columns can be grouped by the first characters. To specify the required grouping mode, use the column's **GroupInterval** property.

To learn more, see Group Modes.

GroupValueTemplate Property

Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupValueTemplate As DataTemplate
```

C#

```
public DataTemplate GroupValueTemplate { get; set; }
```

Property Value

The data template that defines the presentation of group values.

Remarks

Each column provides the **GroupValueTemplate** property that allows you to specify a custom template used to render its values displayed within group rows.

GroupValueTemplateSelector Property

Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupValueTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector GroupValueTemplateSelector { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

A template that defines the presentation of column values displayed within group rows is specified by the GridControlBase.GroupValueTemplate property. If you have more than one template that can be used to render group values, you can implement custom logic to choose the required template. To do this, derive from the Windows.UI.Xaml.Controls.DataTemplateSelector class, implement the **SelectTemplateCore** method that returns a template which meets the required condition, and assign it to the **GroupValueTemplateSelector** property.

If both the GridControlBase.GroupValueTemplate and **GroupValueTemplateSelector** are specified, a group value is rendered using the template returned by the template selector. If the template selector returns **null**, the template specified by the GridControlBase.GroupValueTemplate property is used.

IsGrouped Property

Gets whether the grid is grouped by the values of this column. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsGrouped As Boolean
```

C#

```
public bool IsGrouped { get; }
```

Property Value

true, if the grid is grouped by the values of this column; otherwise, **false**.

GridColumnCollection Class

Represents the grid's column collection.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridColumnCollection Inherits ColumnCollectionBase(of GridColumnBase)
```

C#

```
public class GridColumnCollection : ColumnCollectionBase<GridColumnBase>
```

Remarks

The grid stores its columns within the GridControl.Columns collection. The **GridColumnCollection** class provides methods that can be used to add, delete, or access individual columns and perform other common collection management tasks.

Inheritance Hierarchy

ChangeColumnSortOrder Property

Toggles a column's sort order.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ChangeColumnSortOrder As ICommand
```

C#

```
public ICommand ChangeColumnSortOrder { get; }
```

Property Value

A command that implements the System.Windows.Input.ICommand interface.

Remarks

Corresponding Property: ColumnBase.SortOrder

See Also

ClearColumnFilter Property

Removes the filter condition applied to a column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ClearColumnFilter As ICommand
```

C#

```
public ICommand ClearColumnFilter { get; }
```

Property Value

A command that implements the System.Windows.Input.ICommand interface.

Remarks

Corresponding Method: DataControlBase.ClearColumnFilter.

SetColumnSortOrder Property

Gets the command that sets the sort order applied to the column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property SetColumnSortOrder As ICommand
```

C#

```
public ICommand SetColumnSortOrder { get; }
```

Property Value

A command that implements the System.Windows.Input.ICommand interface.

Remarks

This command accepts a parameter of the ColumnSortOrder type.

GridColumnDataEventArgs Members

Provides data for the GridControl.CustomUnboundColumnData event.

The following tables list the members exposed by the GridColumnDataEventArgs type.

Public Properties

	Name	Description
	Column	Gets the unbound column currently being processed.
	IsGetData	(Inherited from **DevExpress.UI.Xaml.Grid.ColumnDataEventArgsBase**)
	IsSetData	(Inherited from **DevExpress.UI.Xaml.Grid.ColumnDataEventArgsBase**)
	ListSourceRowIndex	Gets the index of the record in the data source to which the processed item corresponds.
	Row	Get a data row which contains the cell currently being processed.
	Source	Gets the grid control that raised the event.
	Value	(Inherited from **DevExpress.UI.Xaml.Grid.ColumnDataEventArgsBase**)

Public Methods

	Name	Description
	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Object**)
	GetHashCode	(Inherited from **System.Object**)
	GetListSourceFieldValue	Overloaded. Returns the value of the specified cell within the processed item in the grid item source.
	GetType	(Inherited from **System.Object**)
	ReferenceEquals	(Inherited from **System.Object**)
	ToString	(Inherited from **System.Object**)

Public Fields

	Name	Description
	Empty	(Inherited from **System.EventArgs**)

ListSourceRowIndex Property

Gets the index of the record in the data source to which the processed item corresponds.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ListSourceRowIndex As Integer
```

C#

```
public int ListSourceRowIndex { get; }
```

Property Value

A zero-based integer value that specifies the index of the record in a data source to which the processed item corresponds.

GetListSourceFieldValue Method

Returns the value of the specified cell within the processed item in the grid item source.

Overload List

Name	Description
object GetListSourceFieldValue(string fieldName)	Returns the value of the specified cell within the processed item in the grid item source.
object GetListSourceFieldValue(int listSourceRowIndex, string fieldName)	Returns the value of the specified cell within the specified item in the grid item source.

See Also
GridColumnDataEventArgs Class
GridColumnDataEventArgs Members
DevExpress.UI.Xaml.Grid Namespace
GridColumnDataEventArgs.GetListSourceFieldValue Overload List

Returns the value of the specified cell within the processed item in the grid item source.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function GetListSourceFieldValue(
   ByVal fieldName As String
) As Object
```
C#
```
public object GetListSourceFieldValue(
   string fieldName
)
```

Parameters
fieldName
A string value that specifies the name of the item source field.

Return Value

An object that represents a value from the grid item source.

Remarks

This method allows you to obtain any field value from the item source record to which the processed item corresponds. To obtain any field value in any item source record, use the **GetListSourceFieldValue** method's overload.

See Also
GridColumnDataEventArgs Class
GridColumnDataEventArgs Members
DevExpress.UI.Xaml.Grid Namespace
GridColumnDataEventArgs.GetListSourceFieldValue Overload List

Returns the value of the specified cell within the specified item in the grid item source.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function GetListSourceFieldValue(
   ByVal listSourceRowIndex As Integer,
   ByVal fieldName As String
) As Object
```

© 2018 Developer Express Inc.

C#

```
public object GetListSourceFieldValue(
   int listSourceRowIndex,
   string fieldName
)
```

Parameters

listSourceRowIndex
A zero-based integer value that identifies the record in an item source by its index.
fieldName
A string value that specifies the name of the item source field.

Return Value

An object that represents a value from the grid item source.

GridColumnDataEventHandler Delegate

Represents a method that will handle the GridControl.CustomUnboundColumnData event.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Delegate Sub GridColumnDataEventHandler(
   ByVal sender As Object,
   ByVal e As GridColumnDataEventArgs
)
```

C#

```
public delegate void GridColumnDataEventHandler(
   object sender,
   GridColumnDataEventArgs e
)
```

Parameters

The declaration of your event handler must have the same parameters as the **GridColumnDataEventHandler** delegate declaration.
sender
The event source.
e
A GridColumnDataEventArgs object that contains event data.

GridComboBoxColumn Class

Represents a column that represents lists.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridComboBoxColumn Inherits GridTextColumnBase
```

C#

```
public class GridComboBoxColumn : GridTextColumnBase
```

Remarks

There are five column types used to present specific data types (Boolean, Date-Time, Numeric, Lists and Text), one column type that provides masking capabilities for text values, and one column type for custom data presentation via templates. Cell values are edited using data editors. Each column type stores specific settings responsible for the data editor's functionality. A cell's editor is created when an end-user starts to edit the cell's value and is automatically destroyed when editing is completed. This dramatically increases the application's performance.

Use the ItemsSource property to specify the source of combo box items. The property name in the items source whose contents are to be displayed by the items in a combo box is specified by the DisplayMemberPath property. The SelectedValuePath property specifies the property path used to get the value of the selected item.

Xaml

```
<Grid:GridComboBoxColumn FieldName="UserId" Header="To" ItemsSource="{Binding Path=Users, Source={StaticI
```

To learn more, see Data Editing.

GridComboBoxColumn Members

Represents a column that represents lists.

The following tables list the members exposed by the GridComboBoxColumn type.

Public Constructors

	Name	Description
	GridComboBoxColumn	Initializes a new instance of the GridComboBoxColumn class.

Public Properties

	Name	Description
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on

© 2018 Developer Express Inc.

		custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)

© 2018 Developer Express Inc.

	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DisplayMemberPath	Gets or sets the name or path of the property that is displayed for each data item. This is a dependency property.
	DisplayTemplate	Gets or sets a template that defines the combobox presentation. This is a dependency property.
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)

© 2018 Developer Express Inc.

	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ItemContainerStyle	Gets or sets the style applied to the container element generated for each item within a combobox. This is a dependency property.
	ItemsSource	Gets or sets the data source of the combobox. This is a dependency property.
	ItemTemplate	Gets or sets a template that defines the presentation of items contained within a combobox. This is a dependency property.
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	SelectedValuePath	Gets or sets the property path used to get the value of the selected item. This is a dependency property.
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter

© 2018 Developer Express Inc.

		item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TextTrimming	Gets or sets the text trimming behavior. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TextWrapping	Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This

© 2018 Developer Express Inc.

		is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

GridComboBoxColumn Constructor

Initializes a new instance of the GridComboBoxColumn class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public GridComboBoxColumn()
```

GridComboBoxColumn Properties

Represents a column that represents lists.

The following tables list the members exposed by the GridComboBoxColumn type.

Public Constructors

	Name	Description
	GridComboBoxColumn	Initializes a new instance of the GridComboBoxColumn class.

Public Properties

	Name	Description
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on

© 2018 Developer Express Inc.

		custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)

© 2018 Developer Express Inc.

	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DisplayMemberPath	Gets or sets the name or path of the property that is displayed for each data item. This is a dependency property.
	DisplayTemplate	Gets or sets a template that defines the combobox presentation. This is a dependency property.
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)

© 2018 Developer Express Inc.

	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ItemContainerStyle	Gets or sets the style applied to the container element generated for each item within a combobox. This is a dependency property.
	ItemsSource	Gets or sets the data source of the combobox. This is a dependency property.
	ItemTemplate	Gets or sets a template that defines the presentation of items contained within a combobox. This is a dependency property.
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElem**

		ent)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	SelectedValuePath	Gets or sets the property path used to get the value of the selected item. This is a dependency property.
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter

© 2018 Developer Express Inc.

		item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TextTrimming	Gets or sets the text trimming behavior. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TextWrapping	Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This

© 2018 Developer Express Inc.

		is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

DisplayMemberPath Property

Gets or sets the name or path of the property that is displayed for each data item. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property DisplayMemberPath As String
```

C#

```
public string DisplayMemberPath { get; set; }
```

Property Value

A string value that specifies the name or path of the property that is displayed for each data item.

See Also

DisplayTemplate Property

Gets or sets a template that defines the combobox presentation. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property DisplayTemplate As DataTemplate
```

C#

```
public DataTemplate DisplayTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that represents the template that defines the combobox presentation.

ItemContainerStyle Property

Gets or sets the style applied to the container element generated for each item within a combobox. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemContainerStyle As Style
```

C#

```
public Style ItemContainerStyle { get; set; }
```

Property Value

A Windows.UI.Xaml.Style object that is applied to the container element generated for each item.

ItemsSource Property

Gets or sets the data source of the combobox. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemsSource As Object
```

C#

```
public object ItemsSource { get; set; }
```

Property Value

An object that is the data source from which the data is retrieved.

ItemTemplate Property

Gets or sets a template that defines the presentation of items contained within a combobox. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemTemplate As DataTemplate
```

C#

```
public DataTemplate ItemTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that represents the template which defines the presentation of items contained within the list.

SelectedValuePath Property

Gets or sets the property path used to get the value of the selected item. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedValuePath As String
```

C#

```
public string SelectedValuePath { get; set; }
```

Property Value

A string value that specifies the property path used to get the value of the selected item.

GridControl Class

The grid control.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

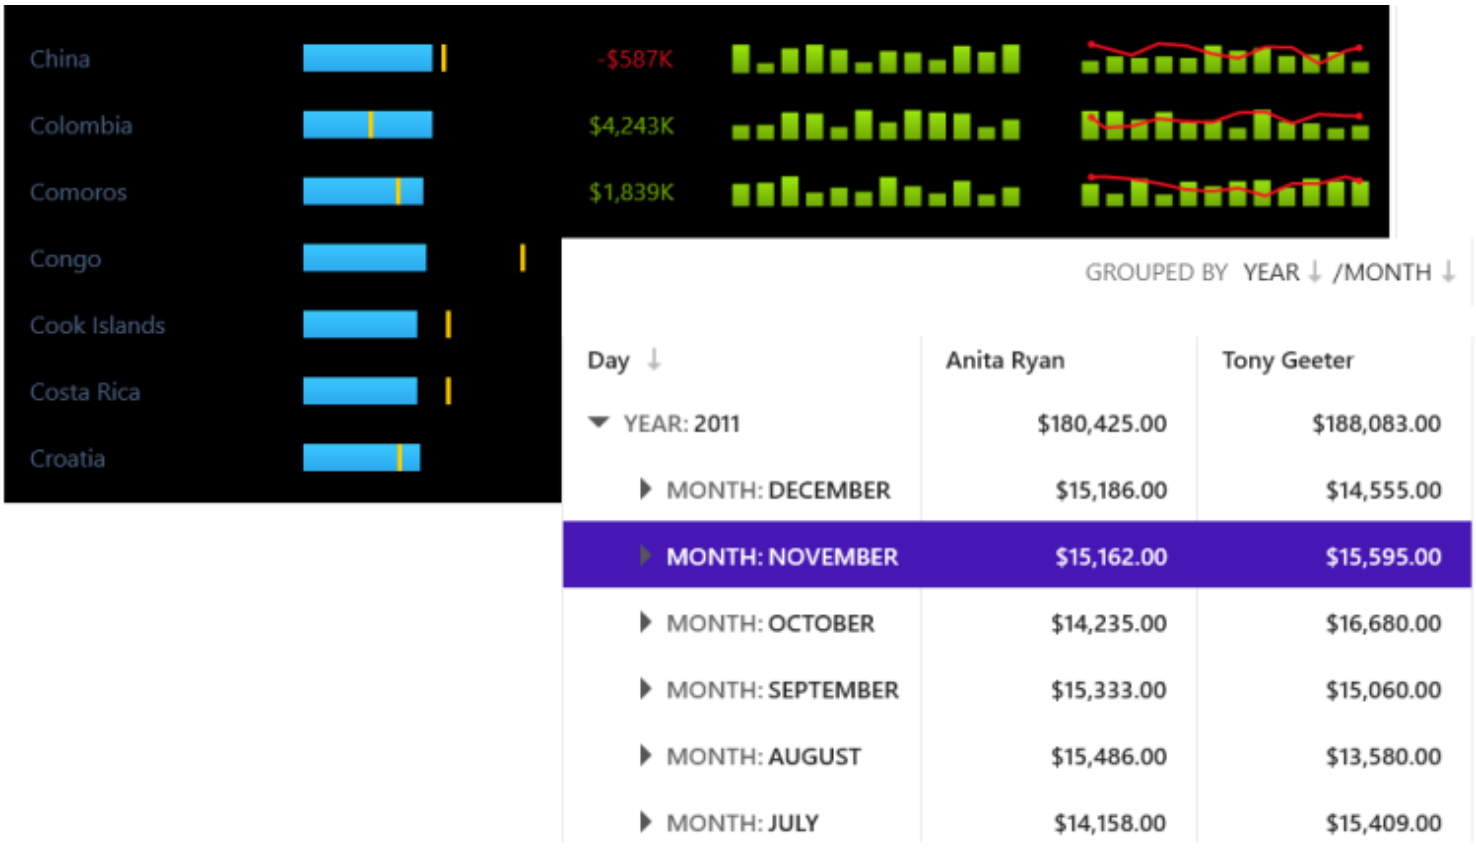
```
Public Class GridControl Inherits GridControlBase, IDataProviderOwner,
  IDataProviderEvents,
  IDataControllerVisualClient,
  IDetailElement(of DataControlBase),
  ITableView,
  IGroupSummaryDisplayMode,
  IContextMenuCustomizer,
  IContextMenuEventsRaiser
```

C#

```
public class GridControl : GridControlBase, IDataProviderOwner,
  IDataProviderEvents,
  IDataControllerVisualClient,
  IDetailElement<DataControlBase>,
  ITableView,
  IGroupSummaryDisplayMode,
  IContextMenuCustomizer,
  IContextMenuEventsRaiser
```

Remarks

The DevExpress Universal Grid Control is a data bound control that provides a two-dimensional representation of data from a data source. The Grid Control ships with a multitude of market-leading features, including advanced data binding, sorting, grouping and filtering, UI virtualization, and much more...



For detailed information on key features introduced by the **DXGrid**, see:

GridControl Members

The grid control.

The following tables list the members exposed by the GridControl type.

Public Constructors

	Name	Description
	GridControl	Initializes a new instance of the GridControl class with default settings.

Public Properties

	Name	Description
	ActiveEditor	Gets the active editor. This is a dependency property. (Inherited from **DataControlBase**)
	ActualGroupCount	Gets the actual number of grouping columns.
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualItemTemplateSelector	Gets the actual template selector that chooses an item template based on custom logic. This is a dependency property.
	ActualShowFilterPanel	Gets whether the filter panel is displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by column. This is a dependency property. (Inherited from **DataControlBase**)
	AllowColumnMoving	Gets or sets whether an end-user is allowed to move columns by dragging their headers. This is a dependency property. (Inherited from **DataControlBase**)
	AllowCommitOnValidationAttributeError	Gets or sets whether or not a cell's value that has failed validation specified by the Data Annotations attribute(s), can be posted to a data

© 2018 Developer Express Inc.

		source. This is a dependency property. (Inherited from **DataControlBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users are allowed to change cell values. This is a dependency property. (Inherited from **DataControlBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data. This is a dependency property. (Inherited from **GridControlBase**)
	AllowHorizontalScrollingVirtualization	Gets or sets a value indicating whether virtualization is enabled for horizontal scrolling.
	AllowLeaveInvalidEditor	Gets or sets whether an editor that did not pass validation can lose focus. This is a dependency property. (Inherited from **DataControlBase**)
	AllowLiveDataShaping	Gets or sets whether or not the grid recalculates sorting/grouping/filtering/summaries automatically when data in a data source is modified outside the grid.
	AllowResizing	Gets or sets whether end-users can change column widths by dragging the edges of their headers.
	AllowSorting	Gets or sets whether an end-user can sort data. This is a dependency property. (Inherited from **DataControlBase**)
	AlternateRowBackground	Gets or sets the brush used to paint the background of alternate rows. This is a dependency property.
	AlternateRowBackgroundPalette	Gets or sets the palette used to paint the background of alternate rows. This is a dependency property.
	AlternationCount	Gets or sets the alternate row frequency. This is a dependency property.
	AutoExpandAllGroups	Gets or sets whether all group rows are automatically expanded after each grouping operation. This is a dependency property.
	AutoGenerateColumns	Gets or sets whether columns should be created automatically for all fields in a data source. This is a dependency property. (Inherited from **DataControlBase**)
	AutoScrollOnSorting	Gets or sets whether a grid is automatically scrolled after the order

© 2018 Developer Express Inc.

		of rows has been changed. This is a dependency property. (Inherited from **DataControlBase**)
	AutoWidth	Gets or sets whether column widths are automatically changed so that the total column width matches the grid width.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BottomAdditionalRowsCount	
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style applied to data cells displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnHeaderStyle	Gets or sets the column header's style. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderTemplate	Gets or sets the template that defines the presentation of column header content. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderToolTipTemplate	Gets or sets the template that defines the presentation of a column header's tooltip. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnMenu	Gets or sets the context menu that is invoked when the end-user right-clicks a column header.
	Columns	Provides access to the grid's column collection.
	Commands	Provides access to grid commands.
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CurrentColumn	Gets or sets the focused column. (Inherited from **GridControlBase**)
	CurrentGrid	Gets or sets the data control currently used within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	CurrentItem	Gets or sets the currently focused data row. (Inherited from **DataControlBase**)
	CurrentViewChangedListener	This member supports the internal infrastructure and cannot be used directly from your code. This is a dependency property. (Inherited from **DataControlBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FilterCriteria	Gets or sets the grid's filter criteria. This is a dependency property. (Inherited from **DataControlBase**)
	FilterPanelText	Gets the text displayed within the Filter Panel. This is a dependency property. (Inherited from **DataControlBase**)
	FilterString	Gets or sets the grid's filter expression. This is a dependency property. (Inherited from **DataControlBase**)
	FixedSummariesLeft	Gets total summaries displayed within the Fixed Summary Panel and aligned to the left. (Inherited from **DataControlBase**)
	FixedSummariesRight	Gets total summaries displayed within the Fixed Summary Panel and aligned to the right. (Inherited from **DataControlBase**)
	FixedTotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property. (Inherited from **DataControlBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusedBorderTemplate	Gets or sets the template that defines the presentation of a focused row's border. This is a dependency property. (Inherited from **DataControlBase**)
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GridMenu	Gets or sets the context menu that is invoked when the end-user right-clicks within an empty space within the grid.
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items. This is a dependency property.
	GroupPanelMenu	Gets or sets the context menu that is invoked when the end-user right-clicks within the Group Panel.
	GroupSummary	Provides access to group summary items.

© 2018 Developer Express Inc.

	GroupSummaryContentStyle	Gets or sets the style applied to group summary items. This is a dependency property. (Inherited from **GridControlBase**)
	GroupSummaryDisplayMode	Gets or sets the position of group summaries within a group row. This is a dependency property.
	GroupSummaryItemTemplate	Gets or sets the template that defines the presentation of summary items displayed within group rows. This is a dependency property. (Inherited from **GridControlBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridControlBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridControlBase**)
	HasValidationError	Gets whether a validation error has been defined for the grid. This is a dependency property. (Inherited from **DataControlBase**)
	HeadersData	Gets the information about column headers. (Inherited from **DataControlBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalViewport	Gets the width of the grid's client area.
	IncrementalLoadingThreshold	Gets or sets the threshold range that governs when the grid will begin to prefetch more row items. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **DataControlBase**)
	IndicatorWidth	Gets or sets the width of the Row Indicator Panel.
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEditing	Gets whether the focused cell is currently being edited. This is a dependency property. (Inherited from **DataControlBase**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsFilterEnabled	Gets or sets whether the current filter is enabled. This is a dependency property. (Inherited from **DataControlBase**)
	IsFocused	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsGrouped	Gets whether the grid's data is grouped.
	IsGroupPanelVisible	Gets whether the Group Panel is visible. (Inherited from **GridControlBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsKeyboardFocusWithin	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsLoaded	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsMouseOver	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSynchronizedWithCurrentItem	Gets or sets whether a grid should keep the DataControlBase.SelectedItem synchronized with the current item in the Windows.UI.Xaml.Data.ICollectionView. This is a dependency property. (Inherited from **DataControlBase**)
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemClickCommand	Gets or sets the command to invoke when an item is clicked. (Inherited from **DataControlBase**)
	ItemContainerStyle	Gets or sets the style applied to the container element generated for each item within the grid. This is a dependency property.
	ItemMinHeight	Gets or sets the minimum height of rows. This is a dependency property.
	ItemNavigationMode	Gets or sets whether a single or double tap is needed to navigate to an item. (Inherited from **DataControlBase**)
	ItemNavigationTargetParameterBinding	Gets or sets a binding that defines a parameter to be passed to the target page, invoked when clicking an item. (Inherited from **DataControlBase**)
	ItemNavigationTargetType	Allows you to specify a page to be opened when an end-user clicks an item. (Inherited from **DataControlBase**)
	ItemsSource	Gets or sets the grid's data source. This is a dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	ItemTemplate	Gets or sets the template that defines the presentation of data rows. This is a dependency property.
	ItemTemplateSelector	Gets or sets an object that chooses a list item template based on custom logic. This is a dependency property.
	KeepFocusedRowOnUpdate	Gets or sets whether the currently selected row retains focus when data is sorted, grouped or filtered. (Inherited from **DataControlBase**)
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LeftDataAreaIndent	This member supports the internal infrastructure and is not intended to be used directly from your code.
	LeftGroupAreaIndent	This member supports the internal infrastructure and is not intended to be used directly from your code.
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	NavigationStyle	Gets or sets whether row focusing is allowed. This is a dependency property. (Inherited from **DataControlBase**)
	NewItemRowPosition	Gets or sets the New Item Row's position within the grid. This is a dependency property.
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Padding	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	PaddingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PreserveSorting	Gets or sets whether clicking a column header clears the existing sort settings. This is a dependency property. (Inherited from **DataControlBase**)
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightDataAreaIndent	This member supports the internal infrastructure and is not intended to be used directly from your code.

© 2018 Developer Express Inc.

	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RowCellMenu	Gets or sets the context menu that is invoked when the end-user right-clicks a data cell, a row or within the Row Indicator Panel.
	RowIndicatorHorizontalOffset	Gets or sets the horizontal offset for the Row Indicator Panel. This is a dependency property.
	SearchColumns	Gets or sets the field names against which searches are performed by the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SearchDelay	Gets or sets the amount of time in milliseconds, after which a data search is initiated (in an automatic find mode). This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelAllowFilter	Gets or sets whether the grid displays only those records that match the search criteria. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelClearOnClose	Gets or sets whether or not the search string is cleared when closing the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelCloseDelay	Gets or sets the amount of time, in milliseconds, after which a Search Panel that doesn't contain any search criteria is closed. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelCriteriaOperatorType	Gets or sets the logical operator type (AND or OR). This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelFindFilter	Gets or sets the type of the comparison operator used to create filter conditions. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelFindMode	Gets or sets whether data searching starts automatically, or must be started manually. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelHighlightingSettings	Gets or sets the font settings used to highlight the text that matches the search criteria. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelHighlightResults	Gets or sets whether to highlight search results within located records.

© 2018 Developer Express Inc.

		This is a dependency property. (Inherited from **DataControlBase**)
	SearchString	Gets or sets the search string specified within the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SelectedItem	Get or sets the currently focused data item. (Inherited from **DataControlBase**)
	SelectedItemHandle	Gets or sets the selected item's handle. This is a dependency property. (Inherited from **DataControlBase**)
	SelectedItems	Gets data objects that correspond to items currently selected within a grid. (Inherited from **DataControlBase**)
	SelectionMode	Gets or sets whether multiple row/cell selection is enabled. This is a dependency property. (Inherited from **DataControlBase**)
	ShowAutoFilterRow	Gets or sets whether the Auto Filter Row is displayed. This is a dependency property.
	ShowColumnHeaders	Gets or sets whether a grid displays column headers. This is a dependency property. (Inherited from **DataControlBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector buttons in the Auto Filter Row for all columns. This is a dependency property.
	ShowFilterPanelMode	Gets or sets when the Filter Panel is displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowFixedTotalSummary	Gets or sets whether or not the Fixed Summary Panel is displayed within the grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowGroupedColumns	Gets or sets whether the grouped columns are displayed within a grid. This is a dependency property. (Inherited from **GridControlBase**)
	ShowGroupPanel	Gets or sets a value specifying whether the Group Panel is displayed. (Inherited from **GridControlBase**)
	ShowIndicator	Gets or sets whether to show the Row Indicator Panel.
	ShowSearchPanelMode	Gets or sets when the Search Panel is shown within the grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowTotalSummary	Gets or sets whether to display the total summary panel. (Inherited from

© 2018 Developer Express Inc.

		DataControlBase)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **DataControlBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	SummariesIgnoreNullValues	Gets or sets whether null values must be ignored when calculating data summaries. This is a dependency property. (Inherited from **DataControlBase**)
	TabIndex	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabIndexProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigation	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigationProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Tag	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Template	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TotalSummary	Provides access to a collection of total summary items.
	TotalSummaryContentStyle	Gets or sets the style applied to total summary items displayed within a View. This is a dependency property. (Inherited from **DataControlBase**)
	TotalSummaryData	Gets information about the total summary. (Inherited from

© 2018 Developer Express Inc.

		DataControlBase)
	TotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property. (Inherited from **DataControlBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseSystemFocusVisuals	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	UseSystemFocusVisualsProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ValidationError	Provides access to the object, which contains information about the validation error. This is a dependency property. (Inherited from **DataControlBase**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	VerticalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VirtualizingCacheHeight	Gets or sets the height of buffer areas above and below the visible area of the grid to be rendered. (Inherited from **DataControlBase**)
	VirtualizingCacheWidth	Gets or sets the width of buffer areas above and below the visible area of the grid to be rendered. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **DataControlBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibleColumns	Gets the list of visible columns. This is a dependency property. (Inherited from **GridControlBase**)
	VisibleRowCount	Gets the total number of rows displayed within the grid. (Inherited from **DataControlBase**)
	Width	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description
	AddHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	AddNewRow	Adds a new record.
	ApplyTemplate	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	BeginDataUpdate	Prevents visual and internal data updates until the DataControlBase.EndDataUpdate method is called. (Inherited from **DataControlBase**)
	BeginInit	Starts the control's runtime initialization. (Inherited from **DataControlBase**)
	BeginSelection	Prevents selection updates until the DataControlBase.EndSelection method is called. (Inherited from **DataControlBase**)
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)
	CapturePointer	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClearColumnFilter	Overloaded. Removes the filter condition applied to the specified column. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	ClearGrouping	Ungroups the grid.
	ClearSorting	Clears the sorting applied to the grid. (Inherited from **DataControlBase**)
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CollapseAllGroups	Collapses all group rows.
	CollapseGroupRow	Overloaded. Collapses the specified group row.
	CommitEditing	Hides the active editor and posts all the changes made within the focused row to a data source if the row values are valid. (Inherited from **DataControlBase**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	DeleteRow	Deletes the specified data row. (Inherited from **GridControlBase**)
	EndDataUpdate	Enables visual and internal data updates after the DataControlBase.BeginDataUpdate method call, and updates the grid. (Inherited from **DataControlBase**)
	EndInit	Ends the runtime initialization. (Inherited from **DataControlBase**)
	EndSelection	Enables selection updates after calling the DataControlBase.BeginSelection method, and forces an immediate update. (Inherited from **DataControlBase**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	ExpandAllGroups	Expands all group rows.
	ExpandGroupRow	Overloaded. Expands the specified group row.
	FindName	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Focus	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetBindingExpression	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	GetCellElementByRowHandleAndColumn	Returns the specified cell's UI element. (Inherited from **DataControlBase**)
	GetCellElementByTreeElement	Returns a cell that contains the specified tree element. (Inherited from **DataControlBase**)
	GetCellValue	Overloaded. Returns the value of the specified data cell.
	GetCellValueByListIndex	Overloaded. Returns the specified cell's value.
	GetChildRowCount	Returns the number of child rows (group or data) contained within the specified group row.
	GetChildRowHandle	Returns the handle of the row contained within the specified group row, at the specified position.
	GetColumnByTreeElement	Returns a column whose cell contains the specified tree element. (Inherited from **DataControlBase**)
	GetColumnFilterCriteria	Overloaded. Returns a filter applied to the specified column. (Inherited from **DataControlBase**)
	GetColumnFilterString	Overloaded. Returns a filter expression applied to the specified column. (Inherited from **DataControlBase**)
S	GetCurrentGrid	Gets the value of the DataControlBase.CurrentGrid attached property for a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	GetCurrentViewChangedListener	Gets the value of the DataControlBase.CurrentViewChangedListener attached property for a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
	GetGroupRowValue	Overloaded. Returns a value of the specified group row in the specified grouping column.
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	GetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetListIndexByRowHandle	Returns the specified data row's index in a data source.
	GetParentRowHandle	Determines a particular row's parent group row.

© 2018 Developer Express Inc.

	GetRow	Returns an object in a data source that corresponds to the specified row.
	GetRowByListIndex	Returns an object that represents the specified row.
	GetRowElementByRowHandle	Returns a UI element that is the specified row. (Inherited from **DataControlBase**)
	GetRowHandleByListIndex	Returns the data row's handle by its index in a data source.
	GetRowHandleByVisibleIndex	Returns a row's handle by specifying its visible index.
	GetRowState	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **DataControlBase**)
	GetRowVisibleIndexByHandle	Returns the row's position within a grid by its handle.
	GetSelectedCells	Returns the selected data cells. (Inherited from **DataControlBase**)
	GetSelectedItem	Returns the currently selected row.
	GetSelectedItemCellValue	Overloaded. Returns the value of the specified cell contained within the focused row.
	GetTotalSummaryValue	Returns the value of the specified total summary item. (Inherited from **DataControlBase**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GroupBy	Overloaded. Groups data by the values of the specified column with the specified sort order. If several columns are involved in grouping, the specified column will reside at the specified grouping level.
	HideEditor	Closes the active editor, discarding all the changes made. (Inherited from **DataControlBase**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	InvalidateArrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidateMeasure	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsCellSelected	Indicates whether the specified cell is selected. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	IsGroupRow	Indicates whether the specified index corresponds to a group row. For internal use only. (Inherited from **GridControlBase**)
	IsGroupRowExpanded	Indicates whether the specified group row is expanded.
	IsItemSelected	Indicates whether the specified item is selected. (Inherited from **DataControlBase**)
	IsRowVisible	Indicates whether the specified row is visible.
	IsValidRowHandle	Indicates whether the specified row handle is valid.
	LockFocus	(Inherited from **DevExpress.Core.Native.DXControl**)
	Measure	(Inherited from **Windows.UI.Xaml.UIElement**)
	MergeColumnFilters	Overloaded. Combines the specified filter with the grid's current filter with the AND operator. (Inherited from **DataControlBase**)
	MoveColumnTo	Moves the specified column to the specified position. (Inherited from **DataControlBase**)
	MoveFirstRow	Moves focus to the first visible row within a grid. (Inherited from **DataControlBase**)
	MoveLastRow	Moves focus to the last visible row within a grid. (Inherited from **DataControlBase**)
	MoveNextPage	Moves focus forward to the bottom row displayed onscreen within a grid.
	MoveNextRow	Moves focus to the row following the one currently focused.
	MovePrevPage	
	MovePrevRow	
	MoveSelectedItem	Selects the specified item. (Inherited from **DataControlBase**)
	PopulateColumns	Creates columns for all fields in a bound data source. (Inherited from **DataControlBase**)
	PostEditor	Saves the active editor's value to a data source without closing the editor. (Inherited from **DataControlBase**)
	RaiseEvent	(Inherited from **DevExpress.Core.Native.DXControl**)

© 2018 Developer Express Inc.

	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RefreshData	Updates the control data. (Inherited from **DataControlBase**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReleasePointerCapture	(Inherited from **Windows.UI.Xaml.UIElement**)
	ReleasePointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	RemoveHandler	(Inherited from **DevExpress.Core.Native.DXControl**)
	ScrollIntoView	Overloaded. Makes the specified row visible onscreen.
	SelectAll	Selects all items within a grid. (Inherited from **DataControlBase**)
	SelectCell	Selects the cell. (Inherited from **DataControlBase**)
	SelectCells	Selects multiple cells. (Inherited from **DataControlBase**)
	SelectItem	Overloaded. Selects the specified item. (Inherited from **DataControlBase**)
	SelectRange	Selects multiple items, while preserving the current selection (if any). (Inherited from **DataControlBase**)
	SetBinding	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	SetCurrentGrid	Sets the value of the DataControlBase.CurrentGrid attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetCurrentViewChangedListener	Sets the value of the DataControlBase.CurrentViewChangedListener attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	SetSelectedItemUnboundColumnValue	Overloaded. Sets the value of the specified unbound column value in the selected item.

© 2018 Developer Express Inc.

	SetUnboundColumnValue	Overloaded. Sets the value of the specified unbound column cell.
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ShowEditor	Activates the focused cell's inplace editor. (Inherited from **DataControlBase**)
	SortBy	Overloaded. Sorts data by the values of the specified column in the specified order, and places the column at the specified position among the sorted columns.
	StartDragAsync	(Inherited from **Windows.UI.Xaml.UIElement**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	TransformToVisual	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TryStartDirectManipulation	(Inherited from **Windows.UI.Xaml.UIElement**)
	UngroupBy	Overloaded. Ungroups data by the values of the specified column.
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	UnselectAll	Unselects any selected items within a grid. (Inherited from **DataControlBase**)
	UnselectCell	Unselects the specified cell. (Inherited from **DataControlBase**)
	UnselectCells	Unselects the specified cells. (Inherited from **DataControlBase**)
	UnselectItem	Overloaded. Unselects the specified item. (Inherited from **DataControlBase**)
	UpdateLayout	(Inherited from **Windows.UI.Xaml.UIElement**)
	UpdateTotalSummary	Updates total summaries. (Inherited from **DataControlBase**)
	UpdateUnboundColumnValues	Updates unbound column values in the specified row. (Inherited from **DataControlBase**)

Public Fields

	Name	Description

		dependency property. (Inherited from **DataControlBase**)
S	FocusedBorderTemplateProperty	Identifies the FocusedBorderTemplate dependency property. (Inherited from **DataControlBase**)
S	FocusVisualStyleProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	GridMenuProperty	Identifies the GridMenu dependency property.
S	GroupColumnSummaryContentStyleProperty	Identifies the GroupColumnSummaryContentStyle dependency property.
S	GroupPanelMenuProperty	Identifies the GroupPanelMenu dependency property.
S	GroupSummaryContentStyleProperty	Identifies the GroupSummaryContentStyle dependency property. (Inherited from **GridControlBase**)
S	GroupSummaryDisplayModeProperty	Identifies the GroupSummaryDisplayMode dependency property.
S	GroupSummaryItemTemplateProperty	Identifies the GroupSummaryItemTemplate dependency property. (Inherited from **GridControlBase**)
S	GroupValueTemplateProperty	Identifies the GroupValueTemplate dependency property. (Inherited from **GridControlBase**)
S	GroupValueTemplateSelectorProperty	Identifies the GroupValueTemplateSelector dependency property. (Inherited from **GridControlBase**)
S	HasValidationErrorProperty	Identifies the HasValidationError dependency property. (Inherited from **DataControlBase**)
S	HorizontalViewportProperty	Identifies the HorizontalViewport dependency property.
S	IncrementalLoadingThresholdProperty	Identifies the IncrementalLoadingThreshold dependency property. (Inherited from **DataControlBase**)
S	InvalidRowHandle	Gets the handle of a row which does not exist in a grid. (Inherited from **DataControlBase**)
S	IsEditingProperty	Identifies the IsEditing dependency property. (Inherited from **DataControlBase**)
S	IsFilterEnabledProperty	Identifies the IsFilterEnabled dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

S	IsGroupedProperty	Identifies the IsGrouped dependency property.
S	IsGroupPanelVisibleProperty	Identifies the IsGroupPanelVisible dependency property. (Inherited from **GridControlBase**)
S	IsKeyboardFocusWithinProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	IsLoadedProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	IsSynchronizedWithCurrentItemProperty	Identifies the IsSynchronizedWithCurrentItem dependency property. (Inherited from **DataControlBase**)
S	ItemClickCommandProperty	Identifies the ItemClickCommand dependency property. (Inherited from **DataControlBase**)
S	ItemContainerStyleProperty	Identifies the ItemContainerStyle dependency property.
S	ItemMinHeightProperty	Identifies the ItemMinHeight dependency property.
S	ItemNavigationModeProperty	Identifies the ItemNavigationMode dependency property. (Inherited from **DataControlBase**)
S	ItemNavigationTargetTypeProperty	Identifies the ItemNavigationTargetType dependency property. (Inherited from **DataControlBase**)
S	ItemsSourceProperty	Identifies the ItemsSource dependency property. (Inherited from **DataControlBase**)
S	ItemTemplateProperty	Identifies the ItemTemplate dependency property.
S	ItemTemplateSelectorProperty	Identifies the ItemTemplateSelector dependency property.
S	KeepFocusedRowOnUpdateProperty	Identifies the KeepFocusedRowOnUpdate dependency property. (Inherited from **DataControlBase**)
S	LeftDataAreaIndentProperty	Identifies the LeftDataAreaIndent dependency property.
S	LeftGroupAreaIndentProperty	Identifies the LeftGroupAreaIndent dependency property.
S	NavigationStyleProperty	Identifies the NavigationStyle dependency property. (Inherited from **DataControlBase**)
S	NewItemRowPositionProperty	Identifies the NewItemRowPosition dependency property.

		DataControlBase)
S	SelectedItemsProperty	Identifies the SelectedItems dependency property. (Inherited from **DataControlBase**)
S	SelectionModeProperty	Identifies the SelectionMode dependency property. (Inherited from **DataControlBase**)
S	ShowAutoFilterRowProperty	Identifies the ShowAutoFilterRow dependency property.
S	ShowColumnHeadersProperty	Identifies the ShowColumnHeaders dependency property. (Inherited from **DataControlBase**)
S	ShowCriteriaInAutoFilterRowProperty	Identifies the ShowCriteriaInAutoFilterRow dependency property.
S	ShowFilterPanelModeProperty	Identifies the ShowFilterPanelMode dependency property. (Inherited from **DataControlBase**)
S	ShowFixedTotalSummaryProperty	Identifies the ShowFixedTotalSummary dependency property. (Inherited from **DataControlBase**)
S	ShowGroupedColumnsProperty	Identifies the ShowGroupedColumns dependency property. (Inherited from **GridControlBase**)
S	ShowGroupPanelProperty	Identifies the ShowGroupPanel dependency property. (Inherited from **GridControlBase**)
S	ShowSearchPanelModeProperty	Identifies the ShowSearchPanelMode dependency property. (Inherited from **DataControlBase**)
S	ShowTotalSummaryProperty	Identifies the ShowTotalSummary dependency property. (Inherited from **DataControlBase**)
S	ShowValidationAttributeErrorsProperty	Identifies the ShowValidationAttributeErrors dependency property. (Inherited from **DataControlBase**)
S	SummariesIgnoreNullValuesProperty	Identifies the SummariesIgnoreNullValues dependency property. (Inherited from **DataControlBase**)
S	TotalSummaryContentStyleProperty	Identifies the TotalSummaryContentStyle dependency property. (Inherited from **DataControlBase**)
S	TotalSummaryItemTemplateProperty	Identifies the TotalSummaryItemTemplate dependency property. (Inherited from **DataControlBase**)
S	ValidationErrorProperty	Identifies the ValidationError dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	VirtualizingCacheHeightProperty	Identifies the VirtualizingCacheHeight dependency property. (Inherited from **DataControlBase**)
	VirtualizingCacheWidthProperty	Identifies the VirtualizingCacheWidth dependency property. (Inherited from **DataControlBase**)
	VisibleColumnsProperty	Identifies the VisibleColumns dependency property. (Inherited from **GridControlBase**)

Public Events

	Name	Description
	AddingNewRow	Fires before a new row is added to the data source via the Grid.
	AutoGeneratedColumns	Occurs after the columns have been automatically generated. (Inherited from **DataControlBase**)
	AutoGeneratingColumn	Occurs each time an individual column is auto-generated. (Inherited from **DataControlBase**)
	BeforeLayoutRefresh	Enables you to lock down end-user capabilities that affect the onscreen position of the focused row (e.g. moving row focus, row scrolling, sorting, etc.). (Inherited from **DataControlBase**)
	CellValueChanged	Occurs after a cell's value has been changed. (Inherited from **GridControlBase**)
	CellValueChanging	Fires in response to changing the edit value. (Inherited from **GridControlBase**)
	ColumnsPopulated	Obsolete. Occurs after the columns have been automatically generated. (Inherited from **DataControlBase**)
	ContextMenuClosed	Occurs after the context menu has been closed.
	ContextMenuOpened	Occurs after the context menu has been opened.
	ContextMenuOpening	Occurs before the context menu is opened.
	CurrentColumnChanged	Occurs after the focused column has been changed. (Inherited from **DataControlBase**)
	CustomColumnGroup	Provides the capability to group data using custom rules.
	CustomColumnSort	Enables you to sort data using custom rules.
	CustomGroupDisplayText	Enables you to provide custom content for group rows. (Inherited from

© 2018 Developer Express Inc.

		GridControlBase)
⚡	CustomSummary	Enables you to calculate summary values manually.
⚡	CustomSummaryExists	Enables you to specify which summaries should be calculated and displayed.
⚡	CustomUnboundColumnData	Enables data to be supplied to unbound columns.
⚡	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
⚡	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
⚡	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
⚡	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)
⚡	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)
⚡	DragStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
⚡	Drop	(Inherited from **Windows.UI.Xaml.UIElement**)
⚡	DropCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
⚡	EndGrouping	Occurs after the grouping operation has been completed.
⚡	EndSorting	Occurs after a sorting operation has been completed.
⚡	FilterChanged	Occurs after the grid's filter has been changed. (Inherited from **DataControlBase**)
⚡	GotFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
⚡	GroupRowCollapsed	Occurs after a group row has been collapsed.
⚡	GroupRowCollapsing	Occurs when a group row is about to be collapsed, allowing cancellation of the action.
⚡	GroupRowExpanded	Occurs after a group row has been expanded.
⚡	GroupRowExpanding	Occurs when a group row is about to be expanded, allowing cancellation of the action.
⚡	HiddenEditor	Occurs after a cell's editor has been closed. (Inherited from **GridControlBase**)

© 2018 Developer Express Inc.

	Holding	(Inherited from **Windows.UI.Xaml.UIElement**)
	InitNewRow	Allows you to initialize a new row with default values.
	InvalidRowException	Fires when a row fails validation or when it cannot be saved to a data source. (Inherited from **GridControlBase**)
	IsEnabledChanged	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemsSourceChanged	Occurs after the DataControlBase.ItemsSource property has been changed. (Inherited from **DataControlBase**)
	KeyDown	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUp	(Inherited from **Windows.UI.Xaml.UIElement**)
	LayoutUpdated	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loading	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LostFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDelta	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCanceled	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLost	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEntered	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExited	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerMoved	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressed	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleased	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChanged	(Inherited from **Windows.UI.Xaml.UIElement**)
	PropertyChanged	Occurs every time any of the GridControl class properties have changed their value. (Inherited from **DataControlBase**)
	RightTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	SelectedItemChanged	Occurs after the selected item has been changed. (Inherited from **DataControlBase**)
	SelectionChanged	Occurs after grid's selection has been changed. (Inherited from **DataControlBase**)
	ShowFilterPopup	Enables you to customize a column's filter dropdown. (Inherited from **DataControlBase**)
	ShownEditor	Occurs after the focused cell's editor has been shown. (Inherited from **GridControlBase**)
	SizeChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	StartGrouping	Occurs before a grouping operation is started.
	StartSorting	Occurs before a sorting operation is started.
	Tapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	Unloaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ValidateCell	Enables you to specify whether the focused cell's data is valid, and whether the cell's editor can be closed.
	ValidateRow	Enables you to specify whether the focused row's data is valid, and whether the row can lose focus.

GridControl Constructor

Initializes a new instance of the GridControl class with default settings.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public GridControl()
```

GridControl Properties

The grid control.

The following tables list the members exposed by the GridControl type.

Public Constructors

	Name	Description
	GridControl	Initializes a new instance of the GridControl class with default settings.

Public Properties

	Name	Description
	ActiveEditor	Gets the active editor. This is a dependency property. (Inherited from **DataControlBase**)
	ActualGroupCount	Gets the actual number of grouping columns.
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualItemTemplateSelector	Gets the actual template selector that chooses an item template based on custom logic. This is a dependency property.
	ActualShowFilterPanel	Gets whether the filter panel is displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by column. This is a dependency property. (Inherited from **DataControlBase**)
	AllowColumnMoving	Gets or sets whether an end-user is allowed to move columns by dragging their headers. This is a dependency property. (Inherited from **DataControlBase**)
	AllowCommitOnValidationAttributeError	Gets or sets whether or not a cell's value that has failed validation specified by the Data Annotations attribute(s), can be posted to a data

© 2018 Developer Express Inc.

		source. This is a dependency property. (Inherited from **DataControlBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users are allowed to change cell values. This is a dependency property. (Inherited from **DataControlBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data. This is a dependency property. (Inherited from **GridControlBase**)
	AllowHorizontalScrollingVirtualization	Gets or sets a value indicating whether virtualization is enabled for horizontal scrolling.
	AllowLeaveInvalidEditor	Gets or sets whether an editor that did not pass validation can lose focus. This is a dependency property. (Inherited from **DataControlBase**)
	AllowLiveDataShaping	Gets or sets whether or not the grid recalculates sorting/grouping/filtering/summaries automatically when data in a data source is modified outside the grid.
	AllowResizing	Gets or sets whether end-users can change column widths by dragging the edges of their headers.
	AllowSorting	Gets or sets whether an end-user can sort data. This is a dependency property. (Inherited from **DataControlBase**)
	AlternateRowBackground	Gets or sets the brush used to paint the background of alternate rows. This is a dependency property.
	AlternateRowBackgroundPalette	Gets or sets the palette used to paint the background of alternate rows. This is a dependency property.
	AlternationCount	Gets or sets the alternate row frequency. This is a dependency property.
	AutoExpandAllGroups	Gets or sets whether all group rows are automatically expanded after each grouping operation. This is a dependency property.
	AutoGenerateColumns	Gets or sets whether columns should be created automatically for all fields in a data source. This is a dependency property. (Inherited from **DataControlBase**)
	AutoScrollOnSorting	Gets or sets whether a grid is automatically scrolled after the order

© 2018 Developer Express Inc.

		of rows has been changed. This is a dependency property. (Inherited from **DataControlBase**)
	AutoWidth	Gets or sets whether column widths are automatically changed so that the total column width matches the grid width.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BottomAdditionalRowsCount	
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style applied to data cells displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnHeaderStyle	Gets or sets the column header's style. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderTemplate	Gets or sets the template that defines the presentation of column header content. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderToolTipTemplate	Gets or sets the template that defines the presentation of a column header's tooltip. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnMenu	Gets or sets the context menu that is invoked when the end-user right-clicks a column header.
	Columns	Provides access to the grid's column collection.
	Commands	Provides access to grid commands.
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CurrentColumn	Gets or sets the focused column. (Inherited from **GridControlBase**)
	CurrentGrid	Gets or sets the data control currently used within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	CurrentItem	Gets or sets the currently focused data row. (Inherited from **DataControlBase**)
	CurrentViewChangedListener	This member supports the internal infrastructure and cannot be used directly from your code. This is a dependency property. (Inherited from **DataControlBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FilterCriteria	Gets or sets the grid's filter criteria. This is a dependency property. (Inherited from **DataControlBase**)
	FilterPanelText	Gets the text displayed within the Filter Panel. This is a dependency property. (Inherited from **DataControlBase**)
	FilterString	Gets or sets the grid's filter expression. This is a dependency property. (Inherited from **DataControlBase**)
	FixedSummariesLeft	Gets total summaries displayed within the Fixed Summary Panel and aligned to the left. (Inherited from **DataControlBase**)
	FixedSummariesRight	Gets total summaries displayed within the Fixed Summary Panel and aligned to the right. (Inherited from **DataControlBase**)
	FixedTotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property. (Inherited from **DataControlBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusedBorderTemplate	Gets or sets the template that defines the presentation of a focused row's border. This is a dependency property. (Inherited from **DataControlBase**)
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GridMenu	Gets or sets the context menu that is invoked when the end-user right-clicks within an empty space within the grid.
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items. This is a dependency property.
	GroupPanelMenu	Gets or sets the context menu that is invoked when the end-user right-clicks within the Group Panel.
	GroupSummary	Provides access to group summary items.

© 2018 Developer Express Inc.

	GroupSummaryContentStyle	Gets or sets the style applied to group summary items. This is a dependency property. (Inherited from **GridControlBase**)
	GroupSummaryDisplayMode	Gets or sets the position of group summaries within a group row. This is a dependency property.
	GroupSummaryItemTemplate	Gets or sets the template that defines the presentation of summary items displayed within group rows. This is a dependency property. (Inherited from **GridControlBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridControlBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridControlBase**)
	HasValidationError	Gets whether a validation error has been defined for the grid. This is a dependency property. (Inherited from **DataControlBase**)
	HeadersData	Gets the information about column headers. (Inherited from **DataControlBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalViewport	Gets the width of the grid's client area.
	IncrementalLoadingThreshold	Gets or sets the threshold range that governs when the grid will begin to prefetch more row items. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **DataControlBase**)
	IndicatorWidth	Gets or sets the width of the Row Indicator Panel.
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEditing	Gets whether the focused cell is currently being edited. This is a dependency property. (Inherited from **DataControlBase**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsFilterEnabled	Gets or sets whether the current filter is enabled. This is a dependency property. (Inherited from **DataControlBase**)
	IsFocused	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsGrouped	Gets whether the grid's data is grouped.
	IsGroupPanelVisible	Gets whether the Group Panel is visible. (Inherited from **GridControlBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsKeyboardFocusWithin	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsLoaded	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsMouseOver	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSynchronizedWithCurrentItem	Gets or sets whether a grid should keep the DataControlBase.SelectedItem synchronized with the current item in the Windows.UI.Xaml.Data.ICollectionView. This is a dependency property. (Inherited from **DataControlBase**)
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemClickCommand	Gets or sets the command to invoke when an item is clicked. (Inherited from **DataControlBase**)
	ItemContainerStyle	Gets or sets the style applied to the container element generated for each item within the grid. This is a dependency property.
	ItemMinHeight	Gets or sets the minimum height of rows. This is a dependency property.
	ItemNavigationMode	Gets or sets whether a single or double tap is needed to navigate to an item. (Inherited from **DataControlBase**)
	ItemNavigationTargetParameterBinding	Gets or sets a binding that defines a parameter to be passed to the target page, invoked when clicking an item. (Inherited from **DataControlBase**)
	ItemNavigationTargetType	Allows you to specify a page to be opened when an end-user clicks an item. (Inherited from **DataControlBase**)
	ItemsSource	Gets or sets the grid's data source. This is a dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	ItemTemplate	Gets or sets the template that defines the presentation of data rows. This is a dependency property.
	ItemTemplateSelector	Gets or sets an object that chooses a list item template based on custom logic. This is a dependency property.
	KeepFocusedRowOnUpdate	Gets or sets whether the currently selected row retains focus when data is sorted, grouped or filtered. (Inherited from **DataControlBase**)
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LeftDataAreaIndent	This member supports the internal infrastructure and is not intended to be used directly from your code.
	LeftGroupAreaIndent	This member supports the internal infrastructure and is not intended to be used directly from your code.
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	NavigationStyle	Gets or sets whether row focusing is allowed. This is a dependency property. (Inherited from **DataControlBase**)
	NewItemRowPosition	Gets or sets the New Item Row's position within the grid. This is a dependency property.
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Padding	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	PaddingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PreserveSorting	Gets or sets whether clicking a column header clears the existing sort settings. This is a dependency property. (Inherited from **DataControlBase**)
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightDataAreaIndent	This member supports the internal infrastructure and is not intended to be used directly from your code.

© 2018 Developer Express Inc.

	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RowCellMenu	Gets or sets the context menu that is invoked when the end-user right-clicks a data cell, a row or within the Row Indicator Panel.
	RowIndicatorHorizontalOffset	Gets or sets the horizontal offset for the Row Indicator Panel. This is a dependency property.
	SearchColumns	Gets or sets the field names against which searches are performed by the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SearchDelay	Gets or sets the amount of time in milliseconds, after which a data search is initiated (in an automatic find mode). This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelAllowFilter	Gets or sets whether the grid displays only those records that match the search criteria. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelClearOnClose	Gets or sets whether or not the search string is cleared when closing the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelCloseDelay	Gets or sets the amount of time, in milliseconds, after which a Search Panel that doesn't contain any search criteria is closed. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelCriteriaOperatorType	Gets or sets the logical operator type (AND or OR). This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelFindFilter	Gets or sets the type of the comparison operator used to create filter conditions. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelFindMode	Gets or sets whether data searching starts automatically, or must be started manually. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelHighlightingSettings	Gets or sets the font settings used to highlight the text that matches the search criteria. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelHighlightResults	Gets or sets whether to highlight search results within located records.

© 2018 Developer Express Inc.

		This is a dependency property. (Inherited from **DataControlBase**)
	SearchString	Gets or sets the search string specified within the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SelectedItem	Get or sets the currently focused data item. (Inherited from **DataControlBase**)
	SelectedItemHandle	Gets or sets the selected item's handle. This is a dependency property. (Inherited from **DataControlBase**)
	SelectedItems	Gets data objects that correspond to items currently selected within a grid. (Inherited from **DataControlBase**)
	SelectionMode	Gets or sets whether multiple row/cell selection is enabled. This is a dependency property. (Inherited from **DataControlBase**)
	ShowAutoFilterRow	Gets or sets whether the Auto Filter Row is displayed. This is a dependency property.
	ShowColumnHeaders	Gets or sets whether a grid displays column headers. This is a dependency property. (Inherited from **DataControlBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector buttons in the Auto Filter Row for all columns. This is a dependency property.
	ShowFilterPanelMode	Gets or sets when the Filter Panel is displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowFixedTotalSummary	Gets or sets whether or not the Fixed Summary Panel is displayed within the grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowGroupedColumns	Gets or sets whether the grouped columns are displayed within a grid. This is a dependency property. (Inherited from **GridControlBase**)
	ShowGroupPanel	Gets or sets a value specifying whether the Group Panel is displayed. (Inherited from **GridControlBase**)
	ShowIndicator	Gets or sets whether to show the Row Indicator Panel.
	ShowSearchPanelMode	Gets or sets when the Search Panel is shown within the grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowTotalSummary	Gets or sets whether to display the total summary panel. (Inherited from

© 2018 Developer Express Inc.

		DataControlBase)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **DataControlBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	SummariesIgnoreNullValues	Gets or sets whether null values must be ignored when calculating data summaries. This is a dependency property. (Inherited from **DataControlBase**)
	TabIndex	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabIndexProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigation	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigationProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Tag	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Template	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TotalSummary	Provides access to a collection of total summary items.
	TotalSummaryContentStyle	Gets or sets the style applied to total summary items displayed within a View. This is a dependency property. (Inherited from **DataControlBase**)
	TotalSummaryData	Gets information about the total summary. (Inherited from

© 2018 Developer Express Inc.

		DataControlBase)
	TotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property. (Inherited from **DataControlBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseSystemFocusVisuals	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	UseSystemFocusVisualsProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ValidationError	Provides access to the object, which contains information about the validation error. This is a dependency property. (Inherited from **DataControlBase**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	VerticalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VirtualizingCacheHeight	Gets or sets the height of buffer areas above and below the visible area of the grid to be rendered. (Inherited from **DataControlBase**)
	VirtualizingCacheWidth	Gets or sets the width of buffer areas above and below the visible area of the grid to be rendered. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **DataControlBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibleColumns	Gets the list of visible columns. This is a dependency property. (Inherited from **GridControlBase**)
	VisibleRowCount	Gets the total number of rows displayed within the grid. (Inherited from **DataControlBase**)
	Width	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description
	AddHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	AddNewRow	Adds a new record.
	ApplyTemplate	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	BeginDataUpdate	Prevents visual and internal data updates until the DataControlBase.EndDataUpdate method is called. (Inherited from **DataControlBase**)
	BeginInit	Starts the control's runtime initialization. (Inherited from **DataControlBase**)
	BeginSelection	Prevents selection updates until the DataControlBase.EndSelection method is called. (Inherited from **DataControlBase**)
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)
	CapturePointer	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClearColumnFilter	Overloaded. Removes the filter condition applied to the specified column. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	ClearGrouping	Ungroups the grid.
	ClearSorting	Clears the sorting applied to the grid. (Inherited from **DataControlBase**)
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CollapseAllGroups	Collapses all group rows.
	CollapseGroupRow	Overloaded. Collapses the specified group row.
	CommitEditing	Hides the active editor and posts all the changes made within the focused row to a data source if the row values are valid. (Inherited from **DataControlBase**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	DeleteRow	Deletes the specified data row. (Inherited from **GridControlBase**)
	EndDataUpdate	Enables visual and internal data updates after the DataControlBase.BeginDataUpdate method call, and updates the grid. (Inherited from **DataControlBase**)
	EndInit	Ends the runtime initialization. (Inherited from **DataControlBase**)
	EndSelection	Enables selection updates after calling the DataControlBase.BeginSelection method, and forces an immediate update. (Inherited from **DataControlBase**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	ExpandAllGroups	Expands all group rows.
	ExpandGroupRow	Overloaded. Expands the specified group row.
	FindName	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Focus	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetBindingExpression	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	GetCellElementByRowHandleAndColumn	Returns the specified cell's UI element. (Inherited from **DataControlBase**)
	GetCellElementByTreeElement	Returns a cell that contains the specified tree element. (Inherited from **DataControlBase**)
	GetCellValue	Overloaded. Returns the value of the specified data cell.
	GetCellValueByListIndex	Overloaded. Returns the specified cell's value.
	GetChildRowCount	Returns the number of child rows (group or data) contained within the specified group row.
	GetChildRowHandle	Returns the handle of the row contained within the specified group row, at the specified position.
	GetColumnByTreeElement	Returns a column whose cell contains the specified tree element. (Inherited from **DataControlBase**)
	GetColumnFilterCriteria	Overloaded. Returns a filter applied to the specified column. (Inherited from **DataControlBase**)
	GetColumnFilterString	Overloaded. Returns a filter expression applied to the specified column. (Inherited from **DataControlBase**)
S	GetCurrentGrid	Gets the value of the DataControlBase.CurrentGrid attached property for a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	GetCurrentViewChangedListener	Gets the value of the DataControlBase.CurrentViewChangedListener attached property for a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
	GetGroupRowValue	Overloaded. Returns a value of the specified group row in the specified grouping column.
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	GetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetListIndexByRowHandle	Returns the specified data row's index in a data source.
	GetParentRowHandle	Determines a particular row's parent group row.

© 2018 Developer Express Inc.

	GetRow	Returns an object in a data source that corresponds to the specified row.
	GetRowByListIndex	Returns an object that represents the specified row.
	GetRowElementByRowHandle	Returns a UI element that is the specified row. (Inherited from **DataControlBase**)
	GetRowHandleByListIndex	Returns the data row's handle by its index in a data source.
	GetRowHandleByVisibleIndex	Returns a row's handle by specifying its visible index.
	GetRowState	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **DataControlBase**)
	GetRowVisibleIndexByHandle	Returns the row's position within a grid by its handle.
	GetSelectedCells	Returns the selected data cells. (Inherited from **DataControlBase**)
	GetSelectedItem	Returns the currently selected row.
	GetSelectedItemCellValue	Overloaded. Returns the value of the specified cell contained within the focused row.
	GetTotalSummaryValue	Returns the value of the specified total summary item. (Inherited from **DataControlBase**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GroupBy	Overloaded. Groups data by the values of the specified column with the specified sort order. If several columns are involved in grouping, the specified column will reside at the specified grouping level.
	HideEditor	Closes the active editor, discarding all the changes made. (Inherited from **DataControlBase**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	InvalidateArrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidateMeasure	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsCellSelected	Indicates whether the specified cell is selected. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	IsGroupRow	Indicates whether the specified index corresponds to a group row. For internal use only. (Inherited from **GridControlBase**)
	IsGroupRowExpanded	Indicates whether the specified group row is expanded.
	IsItemSelected	Indicates whether the specified item is selected. (Inherited from **DataControlBase**)
	IsRowVisible	Indicates whether the specified row is visible.
	IsValidRowHandle	Indicates whether the specified row handle is valid.
	LockFocus	(Inherited from **DevExpress.Core.Native.DXControl**)
	Measure	(Inherited from **Windows.UI.Xaml.UIElement**)
	MergeColumnFilters	Overloaded. Combines the specified filter with the grid's current filter with the AND operator. (Inherited from **DataControlBase**)
	MoveColumnTo	Moves the specified column to the specified position. (Inherited from **DataControlBase**)
	MoveFirstRow	Moves focus to the first visible row within a grid. (Inherited from **DataControlBase**)
	MoveLastRow	Moves focus to the last visible row within a grid. (Inherited from **DataControlBase**)
	MoveNextPage	Moves focus forward to the bottom row displayed onscreen within a grid.
	MoveNextRow	Moves focus to the row following the one currently focused.
	MovePrevPage	
	MovePrevRow	
	MoveSelectedItem	Selects the specified item. (Inherited from **DataControlBase**)
	PopulateColumns	Creates columns for all fields in a bound data source. (Inherited from **DataControlBase**)
	PostEditor	Saves the active editor's value to a data source without closing the editor. (Inherited from **DataControlBase**)
	RaiseEvent	(Inherited from **DevExpress.Core.Native.DXControl**)

© 2018 Developer Express Inc.

	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RefreshData	Updates the control data. (Inherited from **DataControlBase**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReleasePointerCapture	(Inherited from **Windows.UI.Xaml.UIElement**)
	ReleasePointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	RemoveHandler	(Inherited from **DevExpress.Core.Native.DXControl**)
	ScrollIntoView	Overloaded. Makes the specified row visible onscreen.
	SelectAll	Selects all items within a grid. (Inherited from **DataControlBase**)
	SelectCell	Selects the cell. (Inherited from **DataControlBase**)
	SelectCells	Selects multiple cells. (Inherited from **DataControlBase**)
	SelectItem	Overloaded. Selects the specified item. (Inherited from **DataControlBase**)
	SelectRange	Selects multiple items, while preserving the current selection (if any). (Inherited from **DataControlBase**)
	SetBinding	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	SetCurrentGrid	Sets the value of the DataControlBase.CurrentGrid attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetCurrentViewChangedListener	Sets the value of the DataControlBase.CurrentViewChangedListener attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	SetSelectedItemUnboundColumnValue	Overloaded. Sets the value of the specified unbound column value in the selected item.

© 2018 Developer Express Inc.

	SetUnboundColumnValue	Overloaded. Sets the value of the specified unbound column cell.
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ShowEditor	Activates the focused cell's inplace editor. (Inherited from **DataControlBase**)
	SortBy	Overloaded. Sorts data by the values of the specified column in the specified order, and places the column at the specified position among the sorted columns.
	StartDragAsync	(Inherited from **Windows.UI.Xaml.UIElement**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	TransformToVisual	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TryStartDirectManipulation	(Inherited from **Windows.UI.Xaml.UIElement**)
	UngroupBy	Overloaded. Ungroups data by the values of the specified column.
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	UnselectAll	Unselects any selected items within a grid. (Inherited from **DataControlBase**)
	UnselectCell	Unselects the specified cell. (Inherited from **DataControlBase**)
	UnselectCells	Unselects the specified cells. (Inherited from **DataControlBase**)
	UnselectItem	Overloaded. Unselects the specified item. (Inherited from **DataControlBase**)
	UpdateLayout	(Inherited from **Windows.UI.Xaml.UIElement**)
	UpdateTotalSummary	Updates total summaries. (Inherited from **DataControlBase**)
	UpdateUnboundColumnValues	Updates unbound column values in the specified row. (Inherited from **DataControlBase**)

Public Fields

	Name	Description

© 2018 Developer Express Inc.

S	ActiveEditorProperty	Identifies the ActiveEditor dependency property. (Inherited from **DataControlBase**)
S	ActualGroupCountProperty	Identifies the ActualGroupCount dependency property.
S	ActualItemTemplateSelectorProperty	Identifies the ActualItemTemplateSelector dependency property.
S	ActualShowFilterPanelProperty	Identifies the ActualShowFilterPanel dependency property. (Inherited from **DataControlBase**)
S	AllowColumnFilteringProperty	Identifies the AllowColumnFiltering dependency property. (Inherited from **DataControlBase**)
S	AllowColumnMovingProperty	Identifies the AllowColumnMoving dependency property. (Inherited from **DataControlBase**)
S	AllowCommitOnValidationAttributeErrorProperty	Identifies the AllowCommitOnValidationAttributeError dependency property. (Inherited from **DataControlBase**)
S	AllowEditingProperty	Identifies the AllowEditing dependency property. (Inherited from **DataControlBase**)
S	AllowGroupingProperty	Identifies the AllowGrouping dependency property. (Inherited from **GridControlBase**)
S	AllowHorizontalScrollingVirtualizationProperty	Identifies the AllowHorizontalScrollingVirtualization dependency property.
S	AllowLeaveInvalidEditorProperty	Identifies the AllowLeaveInvalidEditor dependency property. (Inherited from **DataControlBase**)
S	AllowLiveDataShapingProperty	Identifies the AllowLiveDataShaping dependency property.
S	AllowSortingProperty	Identifies the AllowSorting dependency property. (Inherited from **DataControlBase**)
S	AlternateRowBackgroundPaletteProperty	Identifies the AlternateRowBackgroundPalette dependency property.
S	AlternateRowBackgroundProperty	Identifies the AlternateRowBackground dependency property.
S	AlternationCountProperty	Identifies the AlternationCount dependency property.
S	AutoExpandAllGroupsProperty	Identifies the AutoExpandAllGroups dependency property.
S	AutoGenerateColumnsProperty	Identifies the AutoGenerateColumns dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

S	AutoScrollOnSortingProperty	Identifies the AutoScrollOnSorting dependency property. (Inherited from **DataControlBase**)
S	AutoWidthProperty	Identifies the AutoWidth dependency property.
S	CellStyleProperty	Identifies the CellStyle dependency property. (Inherited from **DataControlBase**)
S	ColumnHeaderStyleProperty	Identifies the ColumnHeaderStyle dependency property. (Inherited from **DataControlBase**)
S	ColumnHeaderTemplateProperty	Identifies the ColumnHeaderTemplate dependency property. (Inherited from **DataControlBase**)
S	ColumnHeaderTemplateSelectorProperty	Identifies the ColumnHeaderTemplateSelector dependency property. (Inherited from **DataControlBase**)
S	ColumnHeaderToolTipTemplateProperty	Identifies the ColumnHeaderToolTipTemplate dependency property. (Inherited from **DataControlBase**)
S	ColumnMenuProperty	Identifies the ColumnMenu dependency property.
S	CommandsProperty	Identifies the Commands dependency property. (Inherited from **DataControlBase**)
S	CurrentColumnProperty	Identifies the CurrentColumn dependency property. (Inherited from **GridControlBase**)
S	CurrentGridProperty	Identifies the CurrentGrid dependency property. (Inherited from **DataControlBase**)
S	CurrentItemProperty	Identifies the CurrentItem dependency property. (Inherited from **DataControlBase**)
S	CurrentViewChangedListenerProperty	Identifies the CurrentViewChangedListener dependency property. (Inherited from **DataControlBase**)
S	FilterCriteriaProperty	Identifies the FilterCriteria dependency property. (Inherited from **DataControlBase**)
S	FilterPanelTextProperty	Identifies the FilterPanelText dependency property. (Inherited from **DataControlBase**)
S	FilterStringProperty	Identifies the FilterString dependency property. (Inherited from **DataControlBase**)
S	FixedTotalSummaryItemTemplateProperty	Identifies the FixedTotalSummaryItemTemplate

		dependency property. (Inherited from **DataControlBase**)
S	FocusedBorderTemplateProperty	Identifies the FocusedBorderTemplate dependency property. (Inherited from **DataControlBase**)
S	FocusVisualStyleProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	GridMenuProperty	Identifies the GridMenu dependency property.
S	GroupColumnSummaryContentStyleProperty	Identifies the GroupColumnSummaryContentStyle dependency property.
S	GroupPanelMenuProperty	Identifies the GroupPanelMenu dependency property.
S	GroupSummaryContentStyleProperty	Identifies the GroupSummaryContentStyle dependency property. (Inherited from **GridControlBase**)
S	GroupSummaryDisplayModeProperty	Identifies the GroupSummaryDisplayMode dependency property.
S	GroupSummaryItemTemplateProperty	Identifies the GroupSummaryItemTemplate dependency property. (Inherited from **GridControlBase**)
S	GroupValueTemplateProperty	Identifies the GroupValueTemplate dependency property. (Inherited from **GridControlBase**)
S	GroupValueTemplateSelectorProperty	Identifies the GroupValueTemplateSelector dependency property. (Inherited from **GridControlBase**)
S	HasValidationErrorProperty	Identifies the HasValidationError dependency property. (Inherited from **DataControlBase**)
S	HorizontalViewportProperty	Identifies the HorizontalViewport dependency property.
S	IncrementalLoadingThresholdProperty	Identifies the IncrementalLoadingThreshold dependency property. (Inherited from **DataControlBase**)
S	InvalidRowHandle	Gets the handle of a row which does not exist in a grid. (Inherited from **DataControlBase**)
S	IsEditingProperty	Identifies the IsEditing dependency property. (Inherited from **DataControlBase**)
S	IsFilterEnabledProperty	Identifies the IsFilterEnabled dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

S	IsGroupedProperty	Identifies the IsGrouped dependency property.
S	IsGroupPanelVisibleProperty	Identifies the IsGroupPanelVisible dependency property. (Inherited from **GridControlBase**)
S	IsKeyboardFocusWithinProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	IsLoadedProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	IsSynchronizedWithCurrentItemProperty	Identifies the IsSynchronizedWithCurrentItem dependency property. (Inherited from **DataControlBase**)
S	ItemClickCommandProperty	Identifies the ItemClickCommand dependency property. (Inherited from **DataControlBase**)
S	ItemContainerStyleProperty	Identifies the ItemContainerStyle dependency property.
S	ItemMinHeightProperty	Identifies the ItemMinHeight dependency property.
S	ItemNavigationModeProperty	Identifies the ItemNavigationMode dependency property. (Inherited from **DataControlBase**)
S	ItemNavigationTargetTypeProperty	Identifies the ItemNavigationTargetType dependency property. (Inherited from **DataControlBase**)
S	ItemsSourceProperty	Identifies the ItemsSource dependency property. (Inherited from **DataControlBase**)
S	ItemTemplateProperty	Identifies the ItemTemplate dependency property.
S	ItemTemplateSelectorProperty	Identifies the ItemTemplateSelector dependency property.
S	KeepFocusedRowOnUpdateProperty	Identifies the KeepFocusedRowOnUpdate dependency property. (Inherited from **DataControlBase**)
S	LeftDataAreaIndentProperty	Identifies the LeftDataAreaIndent dependency property.
S	LeftGroupAreaIndentProperty	Identifies the LeftGroupAreaIndent dependency property.
S	NavigationStyleProperty	Identifies the NavigationStyle dependency property. (Inherited from **DataControlBase**)
S	NewItemRowPositionProperty	Identifies the NewItemRowPosition dependency property.

© 2018 Developer Express Inc.

S	PreserveSortingProperty	Identifies the PreserveSorting dependency property. (Inherited from **DataControlBase**)
S	RightDataAreaIndentProperty	Identifies the RightDataAreaIndent dependency property.
S	RowCellMenuProperty	Identifies the RowCellMenu dependency property.
S	RowIndicatorHorizontalOffsetProperty	Identifies the RowIndicatorHorizontalOffset dependency property.
S	SearchColumnsProperty	Identifies the SearchColumns dependency property. (Inherited from **DataControlBase**)
S	SearchDelayProperty	Identifies the SearchDelay dependency property. (Inherited from **DataControlBase**)
S	SearchPanelAllowFilterProperty	Identifies the SearchPanelAllowFilter dependency property. (Inherited from **DataControlBase**)
S	SearchPanelClearOnCloseProperty	Identifies the SearchPanelClearOnClose dependency property. (Inherited from **DataControlBase**)
S	SearchPanelCloseDelayProperty	Identifies the SearchPanelCloseDelay dependency property. (Inherited from **DataControlBase**)
S	SearchPanelCriteriaOperatorTypeProperty	Identifies the SearchPanelCriteriaOperatorType dependency property. (Inherited from **DataControlBase**)
S	SearchPanelFindFilterProperty	Identifies the SearchPanelFindFilter dependency property. (Inherited from **DataControlBase**)
S	SearchPanelFindModeProperty	Identifies the SearchPanelFindMode dependency property. (Inherited from **DataControlBase**)
S	SearchPanelHighlightingSettingsProperty	Identifies the SearchPanelHighlightingSettings dependency property. (Inherited from **DataControlBase**)
S	SearchPanelHighlightResultsProperty	Identifies the SearchPanelHighlightResults dependency property. (Inherited from **DataControlBase**)
S	SearchStringProperty	Identifies the SearchString dependency property. (Inherited from **DataControlBase**)
S	SelectedItemHandleProperty	Identifies the SelectedItemHandle dependency property. (Inherited from **DataControlBase**)
S	SelectedItemProperty	Identifies the SelectedItem dependency property. (Inherited from

© 2018 Developer Express Inc.

		DataControlBase)
S	SelectedItemsProperty	Identifies the SelectedItems dependency property. (Inherited from **DataControlBase**)
S	SelectionModeProperty	Identifies the SelectionMode dependency property. (Inherited from **DataControlBase**)
S	ShowAutoFilterRowProperty	Identifies the ShowAutoFilterRow dependency property.
S	ShowColumnHeadersProperty	Identifies the ShowColumnHeaders dependency property. (Inherited from **DataControlBase**)
S	ShowCriteriaInAutoFilterRowProperty	Identifies the ShowCriteriaInAutoFilterRow dependency property.
S	ShowFilterPanelModeProperty	Identifies the ShowFilterPanelMode dependency property. (Inherited from **DataControlBase**)
S	ShowFixedTotalSummaryProperty	Identifies the ShowFixedTotalSummary dependency property. (Inherited from **DataControlBase**)
S	ShowGroupedColumnsProperty	Identifies the ShowGroupedColumns dependency property. (Inherited from **GridControlBase**)
S	ShowGroupPanelProperty	Identifies the ShowGroupPanel dependency property. (Inherited from **GridControlBase**)
S	ShowSearchPanelModeProperty	Identifies the ShowSearchPanelMode dependency property. (Inherited from **DataControlBase**)
S	ShowTotalSummaryProperty	Identifies the ShowTotalSummary dependency property. (Inherited from **DataControlBase**)
S	ShowValidationAttributeErrorsProperty	Identifies the ShowValidationAttributeErrors dependency property. (Inherited from **DataControlBase**)
S	SummariesIgnoreNullValuesProperty	Identifies the SummariesIgnoreNullValues dependency property. (Inherited from **DataControlBase**)
S	TotalSummaryContentStyleProperty	Identifies the TotalSummaryContentStyle dependency property. (Inherited from **DataControlBase**)
S	TotalSummaryItemTemplateProperty	Identifies the TotalSummaryItemTemplate dependency property. (Inherited from **DataControlBase**)
S	ValidationErrorProperty	Identifies the ValidationError dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	VirtualizingCacheHeightProperty	Identifies the VirtualizingCacheHeight dependency property. (Inherited from **DataControlBase**)
	VirtualizingCacheWidthProperty	Identifies the VirtualizingCacheWidth dependency property. (Inherited from **DataControlBase**)
	VisibleColumnsProperty	Identifies the VisibleColumns dependency property. (Inherited from **GridControlBase**)

Public Events

	Name	Description
	AddingNewRow	Fires before a new row is added to the data source via the Grid.
	AutoGeneratedColumns	Occurs after the columns have been automatically generated. (Inherited from **DataControlBase**)
	AutoGeneratingColumn	Occurs each time an individual column is auto-generated. (Inherited from **DataControlBase**)
	BeforeLayoutRefresh	Enables you to lock down end-user capabilities that affect the onscreen position of the focused row (e.g. moving row focus, row scrolling, sorting, etc.). (Inherited from **DataControlBase**)
	CellValueChanged	Occurs after a cell's value has been changed. (Inherited from **GridControlBase**)
	CellValueChanging	Fires in response to changing the edit value. (Inherited from **GridControlBase**)
	ColumnsPopulated	Obsolete. Occurs after the columns have been automatically generated. (Inherited from **DataControlBase**)
	ContextMenuClosed	Occurs after the context menu has been closed.
	ContextMenuOpened	Occurs after the context menu has been opened.
	ContextMenuOpening	Occurs before the context menu is opened.
	CurrentColumnChanged	Occurs after the focused column has been changed. (Inherited from **DataControlBase**)
	CustomColumnGroup	Provides the capability to group data using custom rules.
	CustomColumnSort	Enables you to sort data using custom rules.
	CustomGroupDisplayText	Enables you to provide custom content for group rows. (Inherited from

© 2018 Developer Express Inc.

		GridControlBase)
	CustomSummary	Enables you to calculate summary values manually.
	CustomSummaryExists	Enables you to specify which summaries should be calculated and displayed.
	CustomUnboundColumnData	Enables data to be supplied to unbound columns.
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	Drop	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	EndGrouping	Occurs after the grouping operation has been completed.
	EndSorting	Occurs after a sorting operation has been completed.
	FilterChanged	Occurs after the grid's filter has been changed. (Inherited from **DataControlBase**)
	GotFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	GroupRowCollapsed	Occurs after a group row has been collapsed.
	GroupRowCollapsing	Occurs when a group row is about to be collapsed, allowing cancellation of the action.
	GroupRowExpanded	Occurs after a group row has been expanded.
	GroupRowExpanding	Occurs when a group row is about to be expanded, allowing cancellation of the action.
	HiddenEditor	Occurs after a cell's editor has been closed. (Inherited from **GridControlBase**)

© 2018 Developer Express Inc.

	Holding	(Inherited from **Windows.UI.Xaml.UIElement**)
	InitNewRow	Allows you to initialize a new row with default values.
	InvalidRowException	Fires when a row fails validation or when it cannot be saved to a data source. (Inherited from **GridControlBase**)
	IsEnabledChanged	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemsSourceChanged	Occurs after the DataControlBase.ItemsSource property has been changed. (Inherited from **DataControlBase**)
	KeyDown	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUp	(Inherited from **Windows.UI.Xaml.UIElement**)
	LayoutUpdated	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loading	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LostFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDelta	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCanceled	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLost	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEntered	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExited	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerMoved	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressed	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleased	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChanged	(Inherited from **Windows.UI.Xaml.UIElement**)
	PropertyChanged	Occurs every time any of the GridControl class properties have changed their value. (Inherited from **DataControlBase**)
	RightTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	SelectedItemChanged	Occurs after the selected item has been changed. (Inherited from **DataControlBase**)
	SelectionChanged	Occurs after grid's selection has been changed. (Inherited from **DataControlBase**)
	ShowFilterPopup	Enables you to customize a column's filter dropdown. (Inherited from **DataControlBase**)
	ShownEditor	Occurs after the focused cell's editor has been shown. (Inherited from **GridControlBase**)
	SizeChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	StartGrouping	Occurs before a grouping operation is started.
	StartSorting	Occurs before a sorting operation is started.
	Tapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	Unloaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ValidateCell	Enables you to specify whether the focused cell's data is valid, and whether the cell's editor can be closed.
	ValidateRow	Enables you to specify whether the focused row's data is valid, and whether the row can lose focus.

© 2018 Developer Express Inc.

ActualGroupCount Property

Gets the actual number of grouping columns.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public ReadOnly Property ActualGroupCount As Integer
```
C#
```
public int ActualGroupCount { get; }
```

Property Value

An integer value that specifies the number of grouping columns.

ActualItemTemplateSelector Property

Gets the actual template selector that chooses an item template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualItemTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ActualItemTemplateSelector { get; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

AllowHorizontalScrollingVirtualization Property

Gets or sets a value indicating whether virtualization is enabled for horizontal scrolling.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowHorizontalScrollingVirtualization As Boolean
```

C#

```
public bool AllowHorizontalScrollingVirtualization { get; set; }
```

Property Value

true to enable virtualization; **false** to disable it.

Remarks

If the AutoWidth property is set to **false** and the number of columns is great, you can speed up the grid's performance by enabling the **AllowHorizontalScrollingVirtualization** option. If this option is enabled, the grid renders only those columns that are displayed onscreen. Each time a grid is horizontally scrolled, visible (displayed onscreen) columns are rendered again. Otherwise, if the **AllowHorizontalScrollingVirtualization** property is set to **false**, the grid renders all columns.

AllowLiveDataShaping Property

Gets or sets whether or not the grid recalculates sorting/grouping/filtering/summaries automatically when data in a data source is modified outside the grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowLiveDataShaping As Boolean
```

C#

```
public bool AllowLiveDataShaping { get; set; }
```

Property Value

true to recalculate sorting/grouping/filtering/summaries automatically when data in a data source is modified outside the grid; otherwise, **false**.

Remarks

The grid control handles only updates from rows/cells that are visible onscreen. This significantly improves performance when working with large volumes of data, where only a small number of rows are visible onscreen. However, this makes it impossible to update sorting/grouping/filtering/summary automatically. To force the grid to update sorting/grouping/filtering/summaries, set the **AllowLiveDataShaping** option to **true**. Note that in certain instances, this may lead to significant performance degradation when handling an intensive data update flow.

If the grid is bound to an IBindingList data source, all notifications, by default, are handled by the IBindingList implementor, and the sorting/grouping/filtering/summary is automatically recalculated. To disable this behavior, set the **AllowLiveDataShaping** property to **false**.

Note

If the grid is bound to ICollectionView, the sorting/grouping/filtering/summary is not updated automatically, regardless of the **AllowLiveDataShaping** option's state. In this instance, sorting/grouping/filtering is handled by the ICollectionView implementor. To recalculate sorting/grouping/filtering manually, use the *ICollectionView.Refresh* method.

	IList	IBindingList (BindingList, DataView)	INotifyCollectionChanged (ObservableCollection)	ICollectionView
INotifyPropertyChanged **AllowLiveDataShaping** = null (default)	**+ -**	**+ +**	**+ -**	**+ -**
INotifyPropertyChanged **AllowLiveDataShaping** = **false**	**+ -**	**+ -**	**+ -**	**+ -**
INotifyPropertyChanged **AllowLiveDataShaping** = **true**	**+ +**	**+ +**	**+ +**	**+ -**
No INotifyPropertyChanged	**- -**	**- -**	**- -**	**- -**

Where:

- - Visible rows are not updated; sorting, grouping, filtering and data summaries are not automatically recalculated.

- + Visible rows are not updated; sorting, grouping, filtering and data summaries are automatically recalculated.

© 2018 Developer Express Inc.

+ - Visible rows are updated; sorting, grouping, filtering and data summaries are not automatically recalculated.

+ + Visible rows are updated; sorting, grouping, filtering and data summaries are automatically recalculated.

Note	
Changes in attached properties are not taken into consideration.

AllowResizing Property

Gets or sets whether end-users can change column widths by dragging the edges of their headers.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowResizing As Boolean
```

C#

```
public bool AllowResizing { get; set; }
```

Property Value

true to allow end-users to change column widths; otherwise, **false**.

Remarks

End-users are allowed to resize columns if the view's **AllowResizing** property is set to **true**. Individual columns provide the ColumnBase.AllowResizing property, allowing the default behavior specified by the grid to be overridden. Setting this property to 'True' or 'False' overrides the default behavior. This can be useful when it is required to prevent an end-user from resizing individual columns.

If the column's ColumnBase.AllowResizing property is set to 'Default', the ability to resize columns is controlled by the grid's **AllowResizing** property. In this instance, to obtain whether an end-user can resize a column, use the ColumnBase.ActualAllowResizing property.

AlternateRowBackground Property

Gets or sets the brush used to paint the background of alternate rows. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AlternateRowBackground As Brush
```

C#

```
public Brush AlternateRowBackground { get; set; }
```

Property Value

A Windows.UI.Xaml.Media.Brush value.

Remarks

The Grid Control allows you to alternate row colors. Use the **AlternateRowBackground** property to set the background color of alternate rows and the AlternationCount property to set the alternate row frequency. Alternatively, use the AlternateRowBackgroundPalette property to set a palette of row background colors.

AlternateRowBackgroundPalette Property

Gets or sets the palette used to paint the background of alternate rows. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AlternateRowBackgroundPalette As AlternateRowBackgroundPalette
```

C#

```
public AlternateRowBackgroundPalette AlternateRowBackgroundPalette { get; set; }
```

Property Value

A DevExpress.UI.Xaml.Grid.AlternateRowBackgroundPalette object.

Remarks

The Grid Control allows you to alternate row colors. Use the AlternateRowBackground property to set the background color of alternate rows and the AlternationCount property to set the alternate row frequency. Alternatively, use the **AlternateRowBackgroundPalette** property to set a palette of row background colors.

See Also

AlternationCount Property

Gets or sets the alternate row frequency. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AlternationCount As Integer
```

C#

```
public int AlternationCount { get; set; }
```

Property Value

An integer value that is the alternate row frequency. By default, **0**

Remarks

The Grid Control allows you to alternate row colors. Use the AlternateRowBackground property to set the background color of alternate rows and the **AlternationCount** property to set the alternate row frequency. Alternatively, use the AlternateRowBackgroundPalette property to set a palette of row background colors.

If the **AlternationCount** property is set to **0**, none of the rows has the alternative background. If the **AlternationCount** property is set to **1**, all rows has the alternative background.

AutoExpandAllGroups Property

Gets or sets whether all group rows are automatically expanded after each grouping operation. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AutoExpandAllGroups As Boolean
```

C#

```
public bool AutoExpandAllGroups { get; set; }
```

Property Value

true to expand all group rows after each grouping operation; otherwise, **false**.

Remarks

To manually expand all group rows at all nesting levels, use the ExpandAllGroups method. To collapse all groups, use the CollapseAllGroups method.

See Also

GridControl Class

AutoWidth Property

Gets or sets whether column widths are automatically changed so that the total column width matches the grid width.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AutoWidth As Boolean
```

C#

```
public bool AutoWidth { get; set; }
```

Property Value

true to enable the column auto width feature; otherwise, **false**. The default is **false**.

Remarks

Column widths can be changed automatically, so that the total column width matches the grid width. In this instance, changing the width of one column automatically changes the widths of other columns. This behavior is controlled by the view's **AutoWidth** property. To obtain the actual width of a column, use the ColumnBase.ActualWidth property.

If the automatic column width calculation is disabled, a column's width is specified by its ColumnBase.Width property. If the total column width exceeds the grid width, a horizontal scrollbar is displayed, allowing an end-user to scroll grid columns.

ColumnMenu Property

Gets or sets the context menu that is invoked when the end-user right-clicks a column header.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ColumnMenu As Object
```

C#

```
public object ColumnMenu { get; set; }
```

Property Value

The UI element invoked when the end-user right-clicks a column header.

Columns Property

Provides access to the grid's column collection.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Columns As GridColumnCollection
```

C#

```
public GridColumnCollection Columns { get; }
```

Property Value

A GridColumnCollection object that represents a collection of columns within the grid.

Remarks

The grid stores its columns within the **Columns** collection. This collection provides methods that allow you to add new and remove existing columns. Individual columns are represented by GridColumnBase descendants, and can be accessed using indexed notation or by the field name (ColumnBase.FieldName).

To access only visible columns whose ColumnBase.Visible property is set to **true**, use a grid's GridControlBase.VisibleColumns property.

Commands Property

Provides access to grid commands.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public ReadOnly Property Commands As GridControlCommands
```
C#
```
public GridControlCommands Commands { get; }
```

Property Value

A GridControlCommands object that provides a set of grid commands.

GridMenu Property

Gets or sets the context menu that is invoked when the end-user right-clicks within an empty space within the grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GridMenu As Object
```

C#

```
public object GridMenu { get; set; }
```

Property Value

The UI element invoked when the end-user right-clicks within an empty space within the grid.

GroupColumnSummaryContentStyle Property

Gets or sets the style applied to group summary items. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupColumnSummaryContentStyle As Style
```

C#

```
public Style GroupColumnSummaryContentStyle { get; set; }
```

Property Value

A Windows.UI.Xaml.Style object that is the style applied to group summary items.

GroupPanelMenu Property

Gets or sets the context menu that is invoked when the end-user right-clicks within the Group Panel.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupPanelMenu As Object
```

C#

```
public object GroupPanelMenu { get; set; }
```

Property Value

The UI element invoked when the end-user right-clicks a data cell, a row or within the row indicator panel.

GroupSummary Property

Provides access to group summary items.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property GroupSummary As GridSummaryItemCollection
```

C#

```
public GridSummaryItemCollection GroupSummary { get; }
```

Property Value

A DevExpress.UI.Xaml.Grid.GridSummaryItemCollection object that represents the collection of group summary items.

Remarks

Group summaries are displayed within group rows when data grouping is applied. Summary items are stored within the **GroupSummary** collection. This collection provides methods and properties that allow you to add, remove and access summary items.

The collection of total summaries can be accessed via the TotalSummary property.

GroupSummaryDisplayMode Property

Gets or sets the position of group summaries within a group row. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupSummaryDisplayMode As GroupSummaryDisplayMode
```

C#

```
public GroupSummaryDisplayMode GroupSummaryDisplayMode { get; set; }
```

Property Value

A GroupSummaryDisplayMode enumeration value that specifies the position of group summaries within a group row.

Remarks

By default, group summaries are displayed to a group row's right. To display group summaries under the corresponding columns, set the **GroupSummaryDisplayMode** property to GroupSummaryDisplayMode.AlignByColumns.

HorizontalViewport Property

Gets the width of the grid's client area.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property HorizontalViewport As Double
```

C#

```
public Double HorizontalViewport { get; }
```

Property Value

A System.Double value that specifies the client area's width.

Remarks

IndicatorWidth Property

Gets or sets the width of the Row Indicator Panel.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Property IndicatorWidth As Double
```
C#
```
public Double IndicatorWidth { get; set; }
```

Property Value

A System.Double value specifying the width of the row indicator panel in pixels.

ItemContainerStyle Property

Gets or sets the style applied to the container element generated for each item within the grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Property ItemContainerStyle As Style
```
C#
```
public Style ItemContainerStyle { get; set; }
```

Property Value

A Windows.UI.Xaml.Style object that is applied to the container element generated for each item.

ItemMinHeight Property

Gets or sets the minimum height of rows. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemMinHeight As Double
```

C#

```
public Double ItemMinHeight { get; set; }
```

Property Value

A System.Double value, specifying the minimum allowed height (in pixels) of rows.

ItemTemplate Property

Gets or sets the template that defines the presentation of data rows. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemTemplate As DataTemplate
```

C#

```
public DataTemplate ItemTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of data rows.

See Also

ItemTemplateSelector Property

Gets or sets an object that chooses a list item template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ItemTemplateSelector { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that applies a template based on custom logic.

Remarks

To implement custom logic for choosing the template, you should implement a Windows.UI.Xaml.Controls.DataTemplateSelector descendant, and override the **Windows.UI.Xaml.Controls.DataTemplateSelector.SelectTemplateCore** method. This method returns a data template for the specified list item.

NewItemRowPosition Property

Gets or sets the New Item Row's position within the grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property NewItemRowPosition As NewItemRowPosition
```

C#

```
public NewItemRowPosition NewItemRowPosition { get; set; }
```

Property Value

A NewItemRowPosition enumeration value. By default, NewItemRowPosition.None.

RowCellMenu Property

Gets or sets the context menu that is invoked when the end-user right-clicks a data cell, a row or within the Row Indicator Panel.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property RowCellMenu As Object
```

C#

```
public object RowCellMenu { get; set; }
```

Property Value

The UI element invoked when the end-user right-clicks a data cell, a row or within the row indicator panel.

RowIndicatorHorizontalOffset Property

Gets or sets the horizontal offset for the Row Indicator Panel. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property RowIndicatorHorizontalOffset As Double
```

C#

```
public Double RowIndicatorHorizontalOffset { get; set; }
```

Property Value

A System.Double value that specifies the offset in pixels.

See Also

GridControl Class
GridControl Members
DevExpress.UI.Xaml.Grid Namespace

ShowAutoFilterRow Property

Gets or sets whether the Auto Filter Row is displayed. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowAutoFilterRow As Boolean
```

C#

```
public bool ShowAutoFilterRow { get; set; }
```

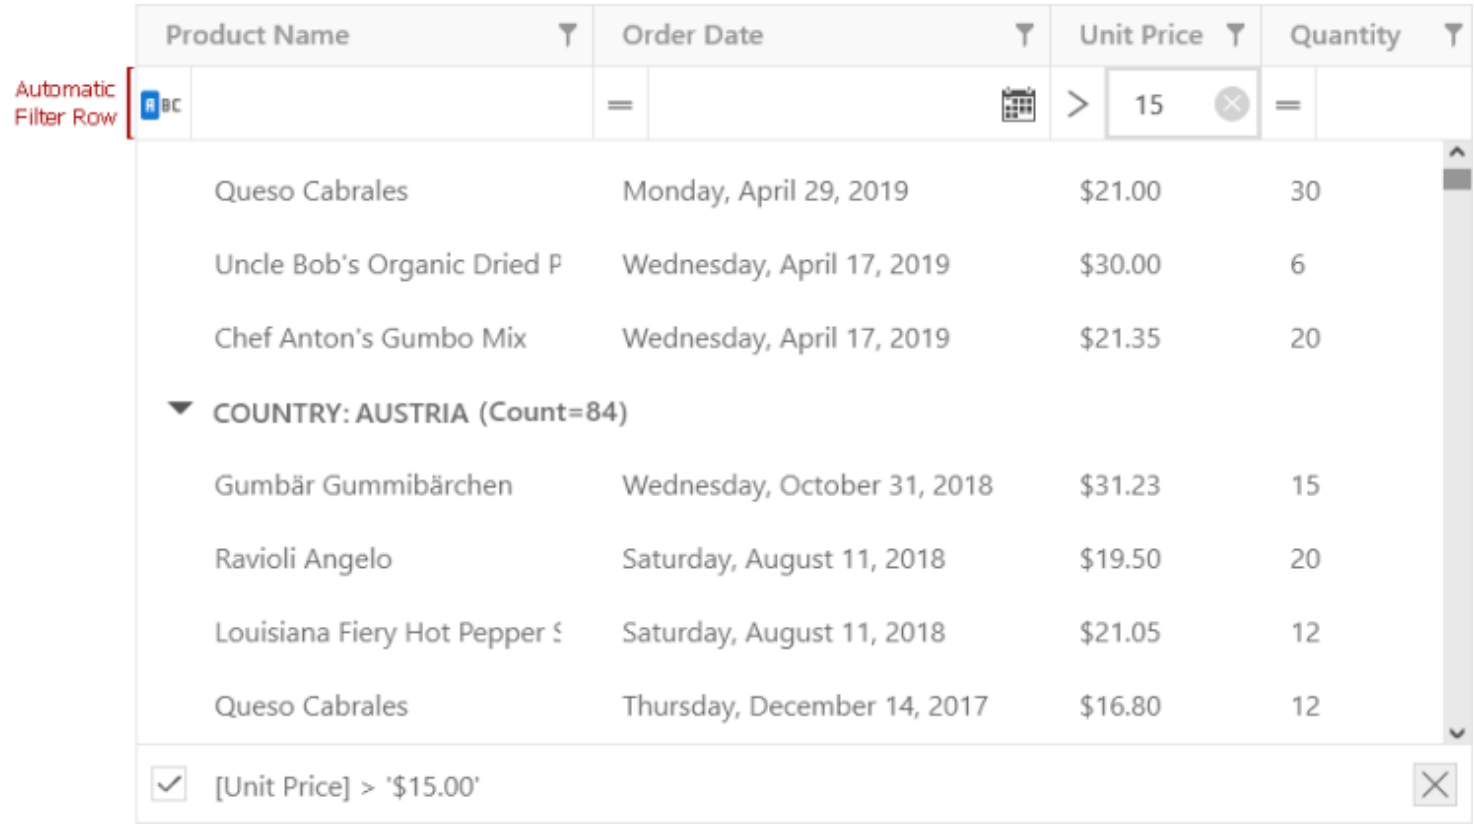
Property Value

true to show the automatic filter row; otherwise, **false**. The default is **false**.

Remarks

The automatic filter row allows end-users to filter data on the fly, by typing text directly into the row. When an end-user types the text within the row, a filter condition is automatically created, based upon the values entered, and applied to the column.

By default, the auto-filter row is hidden. It can be activated by setting the **ShowAutoFilterRow** property to **true**.



To learn more, see Automatic Filter Row.

ShowCriteriaInAutoFilterRow Property

Gets or sets whether or not to display the criteria selector buttons in the Auto Filter Row for all columns. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowCriteriaInAutoFilterRow As Boolean
```

C#

```
public bool ShowCriteriaInAutoFilterRow { get; set; }
```

Property Value

true, to display the criteria selector buttons in the automatic filter row; otherwise, **false**.

Remarks

Use the **ShowCriteriaInAutoFilterRow** property to control the availability of the filter criteria selector for all columns in the current table view.

The **filter criteria selector** allows end-users to apply the required criteria type to the current column.

You can use the ColumnBase.ShowCriteriaInAutoFilterRow property to control the filter criteria selector availability for individual columns.

To learn more, see Automatic Filter Row.

TotalSummary Property

Provides access to a collection of total summary items.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property TotalSummary As GridSummaryItemCollection
```

C#

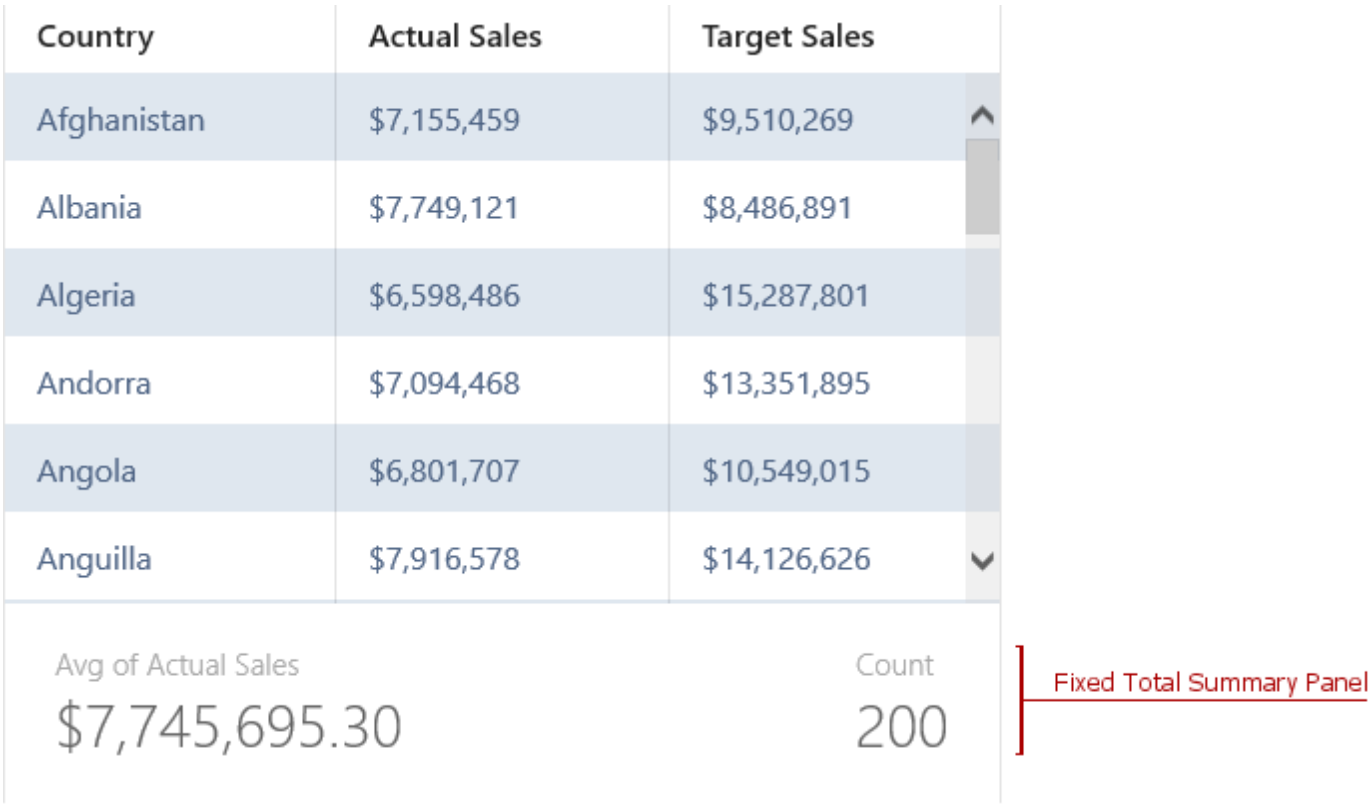
```
public GridSummaryItemCollection TotalSummary { get; }
```

Property Value

A DevExpress.UI.Xaml.Grid.GridSummaryItemCollection object that contains total summary items.

Remarks

Total summaries are values of aggregate functions calculated over all data rows displayed within the grid. Total summaries are displayed within the Fixed Summary Panel, provided that the DataControlBase.ShowFixedTotalSummary property is set to **true**.



To learn more, see Total Summary.

GridControl Events

The grid control.

The following tables list the members exposed by the GridControl type.

Public Events

	Name	Description
	AddingNewRow	Fires before a new row is added to the data source via the Grid.
	AutoGeneratedColumns	Occurs after the columns have been automatically generated. (Inherited from **DataControlBase**)
	AutoGeneratingColumn	Occurs each time an individual column is auto-generated. (Inherited from **DataControlBase**)
	BeforeLayoutRefresh	Enables you to lock down end-user capabilities that affect the onscreen position of the focused row (e.g. moving row focus, row scrolling, sorting, etc.). (Inherited from **DataControlBase**)
	CellValueChanged	Occurs after a cell's value has been changed. (Inherited from **GridControlBase**)
	CellValueChanging	Fires in response to changing the edit value. (Inherited from **GridControlBase**)
	ColumnsPopulated	Obsolete. Occurs after the columns have been automatically generated. (Inherited from **DataControlBase**)
	ContextMenuClosed	Occurs after the context menu has been closed.
	ContextMenuOpened	Occurs after the context menu has been opened.
	ContextMenuOpening	Occurs before the context menu is opened.
	CurrentColumnChanged	Occurs after the focused column has been changed. (Inherited from **DataControlBase**)
	CustomColumnGroup	Provides the capability to group data using custom rules.
	CustomColumnSort	Enables you to sort data using custom rules.
	CustomGroupDisplayText	Enables you to provide custom content for group rows. (Inherited from **GridControlBase**)
	CustomSummary	Enables you to calculate summary values manually.

© 2018 Developer Express Inc.

	CustomSummaryExists	Enables you to specify which summaries should be calculated and displayed.
	CustomUnboundColumnData	Enables data to be supplied to unbound columns.
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	Drop	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	EndGrouping	Occurs after the grouping operation has been completed.
	EndSorting	Occurs after a sorting operation has been completed.
	FilterChanged	Occurs after the grid's filter has been changed. (Inherited from **DataControlBase**)
	GotFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	GroupRowCollapsed	Occurs after a group row has been collapsed.
	GroupRowCollapsing	Occurs when a group row is about to be collapsed, allowing cancellation of the action.
	GroupRowExpanded	Occurs after a group row has been expanded.
	GroupRowExpanding	Occurs when a group row is about to be expanded, allowing cancellation of the action.
	HiddenEditor	Occurs after a cell's editor has been closed. (Inherited from **GridControlBase**)
	Holding	(Inherited from **Windows.UI.Xaml.UIElement**)
	InitNewRow	Allows you to initialize a new row with default values.

© 2018 Developer Express Inc.

	InvalidRowException	Fires when a row fails validation or when it cannot be saved to a data source. (Inherited from **GridControlBase**)
	IsEnabledChanged	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemsSourceChanged	Occurs after the DataControlBase.ItemsSource property has been changed. (Inherited from **DataControlBase**)
	KeyDown	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUp	(Inherited from **Windows.UI.Xaml.UIElement**)
	LayoutUpdated	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loading	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LostFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDelta	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCanceled	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLost	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEntered	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExited	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMoved	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressed	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerReleased	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChanged	(Inherited from **Windows.UI.Xaml.UIElement**)
	PropertyChanged	Occurs every time any of the GridControl class properties have changed their value. (Inherited from **DataControlBase**)
	RightTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	SelectedItemChanged	Occurs after the selected item has been changed. (Inherited from **DataControlBase**)
	SelectionChanged	Occurs after grid's selection has been changed. (Inherited from **DataControlBase**)
	ShowFilterPopup	Enables you to customize a column's filter dropdown. (Inherited from **DataControlBase**)
	ShownEditor	Occurs after the focused cell's editor has been shown. (Inherited from **GridControlBase**)
	SizeChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	StartGrouping	Occurs before a grouping operation is started.
	StartSorting	Occurs before a sorting operation is started.
	Tapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	Unloaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ValidateCell	Enables you to specify whether the focused cell's data is valid, and whether the cell's editor can be closed.
	ValidateRow	Enables you to specify whether the focused row's data is valid, and whether the row can lose focus.

AddingNewRow Event

Fires before a new row is added to the data source via the Grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public AddingNewRow As AddingNewEventHandler
```

C#

```
public event AddingNewEventHandler AddingNewRow
```

Event Data

The event handler receives an argument of type AddingNewEventArgs containing data related to this event.

The following **AddingNewEventArgs** properties provide information specific to this event.

Property	Description
NewObject	Gets or sets the data item to be added to the grid.

Remarks

Use the **AddingNewRow** event to customize the initialization of a new row. To do this, create a data item and set it as the event's AddingNewEventArgs.NewObject property value. By default, the AddingNewEventArgs.NewObject property returns **null** (adding a new row is canceled).

Note
The **AddingNewRow** event does not fire when you add a new row directly to a bound data source.

ContextMenuClosed Event

Occurs after the context menu has been closed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
event Public ContextMenuClosed As EventHandler
```
C#
```
public event EventHandler ContextMenuClosed
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

ContextMenuOpened Event

Occurs after the context menu has been opened.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
event Public ContextMenuOpened As EventHandler
```
C#
```
public event EventHandler ContextMenuOpened
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

ContextMenuOpening Event

Occurs before the context menu is opened.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public ContextMenuOpening As EventHandler(of ContextMenuOpeningEventArgs)
```

C#

```
public event EventHandler<ContextMenuOpeningEventArgs> ContextMenuOpening
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.ContextMenuOpeningEventArgs containing data related to this event.

Remarks

The event's **Info** property returns an object that stores the menu settings.

CustomColumnGroup Event

Provides the capability to group data using custom rules.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public CustomColumnGroup As CustomColumnSortEventHandler
```

C#

```
public event CustomColumnSortEventHandler CustomColumnGroup
```

Event Data

The event handler receives an argument of type CustomColumnSortEventArgs containing data related to this event.

The following **CustomColumnSortEventArgs** properties provide information specific to this event.

Property	Description
Column	Gets the column whose values are being compared.
Handled	Gets or sets whether a comparison operation is handled and no default processing is required.
ListSourceRowIndex1	Gets the index of the first of the two rows being compared in the data source.
ListSourceRowIndex2	Gets the index of the second of the two rows being compared in the data source.
Result	Gets or sets the result of a custom comparison.
SortOrder	Gets the sort order applied to the column.
Source	Gets the grid control that raised the event.
Value1	Gets the first value being compared.
Value2	Gets the second value being compared.

Remarks

If the built-in grouping modes don't suit your requirements, you can implement custom logic. To do this, set the ColumnBase.SortMode property to 'Custom', and handle the **CustomColumnGroup** event. To change the text displayed within group rows by default, handle the GridControlBase.CustomGroupDisplayText event.

Example

Show Me	
A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4881.	

This example shows how to group rows using custom rules. When grouping by the 'Unit Price' column, the rows in this column that have values between 0 and 10 should be combined into a single group. Rows whose values fall between 10 and 20 should be combined into another group, etc.

C#

CustomColumnSort Event

Enables you to sort data using custom rules.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public CustomColumnSort As CustomColumnSortEventHandler
```

C#

```
public event CustomColumnSortEventHandler CustomColumnSort
```

Event Data

The event handler receives an argument of type CustomColumnSortEventArgs containing data related to this event.

The following **CustomColumnSortEventArgs** properties provide information specific to this event.

Property	Description
Column	Gets the column whose values are being compared.
Handled	Gets or sets whether a comparison operation is handled and no default processing is required.
ListSourceRowIndex1	Gets the index of the first of the two rows being compared in the data source.
ListSourceRowIndex2	Gets the index of the second of the two rows being compared in the data source.
Result	Gets or sets the result of a custom comparison.
SortOrder	Gets the sort order applied to the column.
Source	Gets the grid control that raised the event.
Value1	Gets the first value being compared.
Value2	Gets the second value being compared.

Remarks

To sort column values using custom logic, set a column's ColumnBase.SortMode property to ColumnSortMode.Custom, and handle the **CustomColumnSort** event.

When this event is fired, two rows should be compared. The column being processed is specified by the **Column** parameter. The **Value1** and **Value2** parameters identify the values of the rows within this column. The result of the custom comparison should be set to the **Result** parameter as follows:

- **-1** if the first row should be positioned above the second row when data is sorted in ascending order. When data is sorted in descending order, the first row will be positioned below the second row.
- **1** if the first row should be positioned below the second row when data is sorted in ascending order. When data is sorted in descending order, the first row will be positioned above the second row.
- **0** to indicate that the rows are equal. In this case, the rows will be arranged within a grid according to their indices in a data source.

The event parameter's **Handled** property should be set to **true** if the comparison operation was handled. You can leave this parameter set to **false** to invoke the default comparison mechanism after your event handler has finished. In this instance, the custom comparison operation's result is ignored.

CustomSummary Event

Enables you to calculate summary values manually.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
event Public CustomSummary As CustomSummaryEventHandler
```
C#
```
public event CustomSummaryEventHandler CustomSummary
```

Event Data

The event handler receives an argument of type CustomSummaryEventArgs containing data related to this event.
The following **CustomSummaryEventArgs** properties provide information specific to this event.

Property	Description
FieldValue	Gets the processed field value.
GroupLevel	Gets the nesting level of the group whose summary value is being calculated.
GroupRowHandle	Gets a value identifying the group row whose child data rows are involved in summary calculation.
IsGroupSummary	Gets whether a group summary value is being calculated.
IsTotalSummary	Gets whether a total summary value is being calculated.
Item	Gets a summary item whose value is being calculated.
RowHandle	Gets the handle of the processed row.
SummaryProcess	Gets a value indicating calculation stage.
TotalValue	Gets or sets the total summary value.
TotalValueReady	Gets or sets whether the calculation stage of the custom summary calculation process should be skipped.

Remarks

Total summaries provide five predefined aggregate functions (COUNT, MAX, MIN, SUM and AVG). If you want to calculate summaries using custom rules, handle the **CustomSummary** event. This event enables you to implement custom aggregate functions or calculate summary values, using a custom algorithm.

To learn more, see Custom Summary.

CustomSummaryExists Event

Enables you to specify which summaries should be calculated and displayed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public CustomSummaryExists As CustomSummaryExistEventHandler
```

C#

```
public event CustomSummaryExistEventHandler CustomSummaryExists
```

Event Data

The event handler receives an argument of type CustomSummaryExistEventArgs containing data related to this event.

The following **CustomSummaryExistEventArgs** properties provide information specific to this event.

Property	Description
Exists	Gets or sets whether the summary value should be calculated and displayed.
GroupLevel	Gets the nesting level of the group whose summary value is being calculated.
GroupRowHandle	Gets a value identifying the group row whose summary value is about to be calculated.
IsGroupSummary	Gets whether a group summary value is about to be calculated.
IsTotalSummary	Gets whether a total summary value is about to be calculated.
Item	Gets a summary item whose value is about to be calculated.

Remarks

The event is raised before a particular summary value is calculated, allowing cancellation of the calculation. To cancel a summary value calculation, set the event parameter's CustomSummaryExistEventArgs.Exists parameter to **false**.

- Total Summary

In this case, the CustomSummaryExistEventArgs.IsTotalSummary parameter returns **true**. The processed summary item is returned by the CustomSummaryExistEventArgs.Item property. If required, use the summary item's properties to identify the column where it is displayed.

- Group Summary

In this case, the CustomSummaryExistEventArgs.IsGroupSummary parameter returns **true**. The CustomSummaryExistEventArgs.GroupRowHandle property identifies the group for which the summary value is about to be calculated. The processed group summary item is returned by the CustomSummaryExistEventArgs.Item property.

CustomUnboundColumnData Event

Enables data to be supplied to unbound columns.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public CustomUnboundColumnData As GridColumnDataEventHandler
```

C#

```
public event GridColumnDataEventHandler CustomUnboundColumnData
```

Event Data

The event handler receives an argument of type GridColumnDataEventArgs containing data related to this event.
The following **GridColumnDataEventArgs** properties provide information specific to this event.

Property	Description
Column	Gets the unbound column currently being processed.
IsGetData	
IsSetData	
ListSourceRowIndex	Gets the index of the record in the data source to which the processed item corresponds.
Row	Get a data row which contains the cell currently being processed.
Source	Gets the grid control that raised the event.
Value	

Remarks

Unbound columns are not bound to any field in the data source. In most instances, data for unbound columns is obtained from a custom data source or is calculated based upon the values of bound columns. To provide data for unbound columns, handle the **CustomUnboundColumnData** event.

Show Me	
A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4306.	

This example shows how to add an unbound column to the Grid Control.

EndGrouping Event

Occurs after the grouping operation has been completed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public EndGrouping As EventHandler
```

C#

```
public event EventHandler EndGrouping
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

Remarks

Each time the grid's data is grouped or ungrouped by a column, the grid does the following:

- Fires the StartGrouping event.
- Performs data grouping.
- Fires the **EndGrouping** event.

Since data grouping requires sorting, the StartSorting and EndSorting events are also raised before and after grouping.

EndSorting Event

Occurs after a sorting operation has been completed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public EndSorting As EventHandler
```

C#

```
public event EventHandler EndSorting
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

Remarks

When sorting data, the grid does the following:

- Raises the StartSorting event.
- Sorts data.
- Raises the EndSorting event.

GroupRowCollapsed Event

Occurs after a group row has been collapsed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public GroupRowCollapsed As RowEventHandler
```

C#

```
public event RowEventHandler GroupRowCollapsed
```

Event Data

The event handler receives an argument of type RowEventArgs containing data related to this event.

The following **RowEventArgs** properties provide information specific to this event.

Property	Description
Row	Gets the processed row.
RowHandle	Gets the processed row's handle.
Source	Gets the grid that raised the event.

Remarks

The **GroupRowCollapsed** event is raised after a group row has been collapsed by an end-user or in code. The group row is identified by its handle via the RowEventArgs.RowHandle property. This event serves as a notification and the action cannot be cancelled. To control whether individual group rows can be collapsed, handle the GroupRowCollapsing event.

The CollapseAllGroups method allows you to collapse all group rows. In this instance, the **GroupRowCollapsed** event is raised only once. The event parameter's RowEventArgs.RowHandle property returns an invalid row handle (DataControlBase.InvalidRowHandle).

GroupRowCollapsing Event

Occurs when a group row is about to be collapsed, allowing cancellation of the action.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public GroupRowCollapsing As RowAllowEventHandler
```

C#

```
public event RowAllowEventHandler GroupRowCollapsing
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.RowAllowEventArgs containing data related to this event.

Remarks

The **GroupRowCollapsing** event is raised before a group row is collapsed by an end-user or in code, allowing you to cancel this action. The group row is identified by its handle via the **RowHandle** property. To prevent the group row from being collapsed, set the event parameter's **Allow** parameter to **false**.

The CollapseAllGroups method allows you to collapse all group rows. In this instance, the **GroupRowCollapsing** event is raised only once. The event parameter's **RowHandle** property returns an invalid row handle (DataControlBase.InvalidRowHandle).

After the group row has been collapsed, the GroupRowCollapsed event is raised.

GroupRowExpanded Event

Occurs after a group row has been expanded.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public GroupRowExpanded As RowEventHandler
```

C#

```
public event RowEventHandler GroupRowExpanded
```

Event Data

The event handler receives an argument of type RowEventArgs containing data related to this event.

The following **RowEventArgs** properties provide information specific to this event.

Property	Description
Row	Gets the processed row.
RowHandle	Gets the processed row's handle.
Source	Gets the grid that raised the event.

Remarks

The **GroupRowExpanded** event is raised after a group row has been expanded by an end-user or in code. The group row is identified by its handle via the RowEventArgs.RowHandle property. This event serves as a notification, and the action cannot be cancelled. To control whether individual group rows can be expanded, handle the GroupRowExpanding event.

The ExpandAllGroups method allows you to expand all group rows. In this instance, the **GroupRowExpanded** event is raised only once. The event parameter's RowEventArgs.RowHandle property returns an invalid row handle (DataControlBase.InvalidRowHandle).

GroupRowExpanding Event

Occurs when a group row is about to be expanded, allowing cancellation of the action.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public GroupRowExpanding As RowAllowEventHandler
```

C#

```
public event RowAllowEventHandler GroupRowExpanding
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.RowAllowEventArgs containing data related to this event.

Remarks

The **GroupRowExpanding** event is raised before a group row is expanded by an end-user or in code, allowing you to cancel this action. The group row is identified by its handle via the **RowHandle** property. To prevent the group row from being expanded, set the event parameter's **Allow** parameter to **false**.

The ExpandAllGroups method allows you to expand all group rows. In this instance, the **GroupRowExpanding** event is raised only once. The event parameter's **RowHandle** property returns an invalid row handle (DataControlBase.InvalidRowHandle).

After the group row has been expanded, the GroupRowExpanded event is raised.

InitNewRow Event

Allows you to initialize a new row with default values.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public InitNewRow As InitNewRowEventHandler
```

C#

```
public event InitNewRowEventHandler InitNewRow
```

Event Data

The event handler receives an argument of type InitNewRowEventArgs containing data related to this event.

The following **InitNewRowEventArgs** properties provide information specific to this event.

Property	Description
Handled	
OriginalSource	
RoutedEvent	
RowHandle	Gets the handle of the added row.
Source	

Remarks

When an end-user starts to edit the New Item Row, the **InitNewRow** event is raised. You can handle this event to initialize the required fields within the new record. To do this, obtain the row using the GetRow method, cast it to the data item type and set the data property values.

StartGrouping Event

Occurs before a grouping operation is started.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public StartGrouping As EventHandler
```

C#

```
public event EventHandler StartGrouping
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

Remarks

Each time the grid's data is grouped or ungrouped by a column, the grid does the following:

- Fires the **StartGrouping** event.
- Performs data grouping.
- Fires the EndGrouping event.

Since data grouping requires sorting, the StartSorting and EndSorting events are also raised before and after grouping.

StartSorting Event

Occurs before a sorting operation is started.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public StartSorting As EventHandler
```

C#

```
public event EventHandler StartSorting
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

Remarks

When sorting data, the grid does the following:

- Raises the StartSorting event.
- Sorts data.
- Raises the EndSorting event.

ValidateCell Event

Enables you to specify whether the focused cell's data is valid, and whether the cell's editor can be closed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public ValidateCell As GridCellValidationEventHandler
```

C#

```
public event GridCellValidationEventHandler ValidateCell
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.Native.GridCellValidationEventArgs containing data related to this event.

Remarks

The **ValidateCell** event occurs before the focused cell's modified value is posted to a data source, allowing to manually validate its new value.

The focused cell's new value is returned by the event's **CellValue** property. To indicate that the new value is invalid, set the ValidationEventArgs.IsValid property to **false**.

See Also

GridControl Class
GridControl Members
DevExpress.UI.Xaml.Grid Namespace

© 2018 Developer Express Inc.

ValidateRow Event

Enables you to specify whether the focused row's data is valid, and whether the row can lose focus.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public ValidateRow As GridRowValidationEventHandler
```

C#

```
public event GridRowValidationEventHandler ValidateRow
```

Event Data

The event handler receives an argument of type GridRowValidationEventArgs containing data related to this event.

The following **GridRowValidationEventArgs** properties provide information specific to this event.

Property	Description
ErrorContent	Gets or sets an object that describes the validation error.
ErrorType	Gets or sets the error type.
Handled	
IsValid	Gets or sets a value specifying whether the value is valid.
Row	Gets the processed row.
RowHandle	Gets the processed row's handle.
UpdateSource	Gets the action that caused the validation.
Value	Gets the editor's value.

Remarks

Row validation is performed within the **ValidateRow** event handler. This event is automatically fired after the focused row's data has been modified and it is about to lose focus. To manually force row validation, call the DataControlBase.CommitEditing method.

The processed row is returned by the event parameter's GridRowValidationEventArgs.Row property. Its handle is returned by the GridRowValidationEventArgs.RowHandle. After cell values have been obtained, you can verify whether these values meet your validity criteria. If the row fails validation, set the event's **IsValid** parameter to **false**. Otherwise, leave the **IsValid** parameter set to **true**.

To learn more, see Row Validation.

GridControl Methods

The grid control.

The following tables list the members exposed by the GridControl type.

Public Methods

	Name	Description
	AddHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	AddNewRow	Adds a new record.
	ApplyTemplate	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	BeginDataUpdate	Prevents visual and internal data updates until the DataControlBase.EndDataUpdate method is called. (Inherited from **DataControlBase**)
	BeginInit	Starts the control's runtime initialization. (Inherited from **DataControlBase**)
	BeginSelection	Prevents selection updates until the DataControlBase.EndSelection method is called. (Inherited from **DataControlBase**)
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)
	CapturePointer	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClearColumnFilter	Overloaded. Removes the filter condition applied to the specified column. (Inherited from **DataControlBase**)
	ClearGrouping	Ungroups the grid.
	ClearSorting	Clears the sorting applied to the grid. (Inherited from **DataControlBase**)
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CollapseAllGroups	Collapses all group rows.
	CollapseGroupRow	Overloaded. Collapses the specified group row.
	CommitEditing	Hides the active editor and posts all the changes made within the focused row to a data source if the row values are valid. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	DeleteRow	Deletes the specified data row. (Inherited from **GridControlBase**)
	EndDataUpdate	Enables visual and internal data updates after the DataControlBase.BeginDataUpdate method call, and updates the grid. (Inherited from **DataControlBase**)
	EndInit	Ends the runtime initialization. (Inherited from **DataControlBase**)
	EndSelection	Enables selection updates after calling the DataControlBase.BeginSelection method, and forces an immediate update. (Inherited from **DataControlBase**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	ExpandAllGroups	Expands all group rows.
	ExpandGroupRow	Overloaded. Expands the specified group row.
	FindName	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Focus	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetBindingExpression	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GetCellElementByRowHandleAndColumn	Returns the specified cell's UI element. (Inherited from **DataControlBase**)
	GetCellElementByTreeElement	Returns a cell that contains the specified tree element. (Inherited from **DataControlBase**)
	GetCellValue	Overloaded. Returns the value of the specified data cell.
	GetCellValueByListIndex	Overloaded. Returns the specified cell's value.
	GetChildRowCount	Returns the number of child rows (group or data) contained within the specified group row.
	GetChildRowHandle	Returns the handle of the row contained within the specified group row, at the specified position.

© 2018 Developer Express Inc.

	GetColumnByTreeElement	Returns a column whose cell contains the specified tree element. (Inherited from **DataControlBase**)
	GetColumnFilterCriteria	Overloaded. Returns a filter applied to the specified column. (Inherited from **DataControlBase**)
	GetColumnFilterString	Overloaded. Returns a filter expression applied to the specified column. (Inherited from **DataControlBase**)
S	GetCurrentGrid	Gets the value of the DataControlBase.CurrentGrid attached property for a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	GetCurrentViewChangedListener	Gets the value of the DataControlBase.CurrentViewChanged Listener attached property for a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
	GetGroupRowValue	Overloaded. Returns a value of the specified group row in the specified grouping column.
	GetHashCode	(Inherited from **System.Runtime.InteropServices. WindowsRuntime.RuntimeClass**)
S	GetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetListIndexByRowHandle	Returns the specified data row's index in a data source.
	GetParentRowHandle	Determines a particular row's parent group row.
	GetRow	Returns an object in a data source that corresponds to the specified row.
	GetRowByListIndex	Returns an object that represents the specified row.
	GetRowElementByRowHandle	Returns a UI element that is the specified row. (Inherited from **DataControlBase**)
	GetRowHandleByListIndex	Returns the data row's handle by its index in a data source.
	GetRowHandleByVisibleIndex	Returns a row's handle by specifying its visible index.
	GetRowState	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	GetRowVisibleIndexByHandle	Returns the row's position within a grid by its handle.
	GetSelectedCells	Returns the selected data cells. (Inherited from **DataControlBase**)
	GetSelectedItem	Returns the currently selected row.
	GetSelectedItemCellValue	Overloaded. Returns the value of the specified cell contained within the focused row.
	GetTotalSummaryValue	Returns the value of the specified total summary item. (Inherited from **DataControlBase**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GroupBy	Overloaded. Groups data by the values of the specified column with the specified sort order. If several columns are involved in grouping, the specified column will reside at the specified grouping level.
	HideEditor	Closes the active editor, discarding all the changes made. (Inherited from **DataControlBase**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	InvalidateArrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidateMeasure	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsCellSelected	Indicates whether the specified cell is selected. (Inherited from **DataControlBase**)
	IsGroupRow	Indicates whether the specified index corresponds to a group row. For internal use only. (Inherited from **GridControlBase**)
	IsGroupRowExpanded	Indicates whether the specified group row is expanded.
	IsItemSelected	Indicates whether the specified item is selected. (Inherited from **DataControlBase**)
	IsRowVisible	Indicates whether the specified row is visible.
	IsValidRowHandle	Indicates whether the specified row handle is valid.
	LockFocus	(Inherited from **DevExpress.Core.Native.DXControl**)

© 2018 Developer Express Inc.

	Measure	(Inherited from **Windows.UI.Xaml.UIElement**)
	MergeColumnFilters	Overloaded. Combines the specified filter with the grid's current filter with the AND operator. (Inherited from **DataControlBase**)
	MoveColumnTo	Moves the specified column to the specified position. (Inherited from **DataControlBase**)
	MoveFirstRow	Moves focus to the first visible row within a grid. (Inherited from **DataControlBase**)
	MoveLastRow	Moves focus to the last visible row within a grid. (Inherited from **DataControlBase**)
	MoveNextPage	Moves focus forward to the bottom row displayed onscreen within a grid.
	MoveNextRow	Moves focus to the row following the one currently focused.
	MovePrevPage	
	MovePrevRow	
	MoveSelectedItem	Selects the specified item. (Inherited from **DataControlBase**)
	PopulateColumns	Creates columns for all fields in a bound data source. (Inherited from **DataControlBase**)
	PostEditor	Saves the active editor's value to a data source without closing the editor. (Inherited from **DataControlBase**)
	RaiseEvent	(Inherited from **DevExpress.Core.Native.DXControl**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RefreshData	Updates the control data. (Inherited from **DataControlBase**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReleasePointerCapture	(Inherited from **Windows.UI.Xaml.UIElement**)
	ReleasePointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	RemoveHandler	(Inherited from **DevExpress.Core.Native.DXControl**)

© 2018 Developer Express Inc.

	ScrollIntoView	Overloaded. Makes the specified row visible onscreen.
	SelectAll	Selects all items within a grid. (Inherited from **DataControlBase**)
	SelectCell	Selects the cell. (Inherited from **DataControlBase**)
	SelectCells	Selects multiple cells. (Inherited from **DataControlBase**)
	SelectItem	Overloaded. Selects the specified item. (Inherited from **DataControlBase**)
	SelectRange	Selects multiple items, while preserving the current selection (if any). (Inherited from **DataControlBase**)
	SetBinding	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	SetCurrentGrid	Sets the value of the DataControlBase.CurrentGrid attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetCurrentViewChangedListener	Sets the value of the DataControlBase.CurrentViewChangedListener attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	SetSelectedItemUnboundColumnValue	Overloaded. Sets the value of the specified unbound column value in the selected item.
	SetUnboundColumnValue	Overloaded. Sets the value of the specified unbound column cell.
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ShowEditor	Activates the focused cell's inplace editor. (Inherited from **DataControlBase**)
	SortBy	Overloaded. Sorts data by the values of the specified column in the specified order, and places the column at the specified position among the sorted columns.
	StartDragAsync	(Inherited from **Windows.UI.Xaml.UIElement**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

© 2018 Developer Express Inc.

	TransformToVisual	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TryStartDirectManipulation	(Inherited from **Windows.UI.Xaml.UIElement**)
	UngroupBy	Overloaded. Ungroups data by the values of the specified column.
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	UnselectAll	Unselects any selected items within a grid. (Inherited from **DataControlBase**)
	UnselectCell	Unselects the specified cell. (Inherited from **DataControlBase**)
	UnselectCells	Unselects the specified cells. (Inherited from **DataControlBase**)
	UnselectItem	Overloaded. Unselects the specified item. (Inherited from **DataControlBase**)
	UpdateLayout	(Inherited from **Windows.UI.Xaml.UIElement**)
	UpdateTotalSummary	Updates total summaries. (Inherited from **DataControlBase**)
	UpdateUnboundColumnValues	Updates unbound column values in the specified row. (Inherited from **DataControlBase**)

AddNewRow Method

Adds a new record.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub AddNewRow()
```

C#

```
public void AddNewRow()
```

Remarks

Use the **AddNewRow** method to add a new record to the grid's underlying datasource. The grid immediately reflects any changes made to the datasource and focuses the new record.

The **AddNewRow** method is available for all datasources supported by the grid. The data item class should have a public default constructor.

An end-user can add new records via the New Item Row.

ClearGrouping Method

Ungroups the grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Sub ClearGrouping()
```

C#

```
public void ClearGrouping()
```

Remarks

Use the **ClearGrouping** method to cancel data grouping against all grouping columns. To ungroup data by a single column, use the UngroupBy method.

CollapseAllGroups Method

Collapses all group rows.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Sub CollapseAllGroups()
```
C#
```
public override void CollapseAllGroups()
```

Remarks

To collapse a group row, use the CollapseGroupRow method.

CollapseGroupRow Method

Collapses the specified group row.

Overload List

Name	Description
bool CollapseGroupRow(int rowHandle)	Collapses the specified group row.
bool CollapseGroupRow(int rowHandle, bool recursive)	Collapses the specified group row and optionally any child group rows at all nesting levels.

See Also
GridControl Class
GridControl Members
DevExpress.UI.Xaml.Grid Namespace
GridControl.CollapseGroupRow Overload List

Collapses the specified group row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function CollapseGroupRow(
   ByVal rowHandle As Integer
) As Boolean
```
C#
```
public bool CollapseGroupRow(
   int rowHandle
)
```

Parameters
rowHandle
An integer value that specifies the group row's handle. Group row handles are negative (starting from **-1**).

Return Value

true if the specified group row has been collapsed; otherwise, **false**.

See Also
GridControl Class
GridControl Members

ExpandGroupRow

Collapses the specified group row and optionally any child group rows at all nesting levels.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function CollapseGroupRow(
   ByVal rowHandle As Integer,
   ByVal recursive As Boolean
) As Boolean
```
C#
```
public bool CollapseGroupRow(
   int rowHandle,
   bool recursive
)
```

© 2018 Developer Express Inc.

Parameters
rowHandle
An integer value that specifies the group row's handle. Group row handles are negative (starting from **-1**).
recursive
true to collapse any child group rows at all nesting levels; otherwise, **false**.

Return Value

true if the specified group row has been collapsed; otherwise, **false**.

ExpandAllGroups Method

Expands all group rows.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Sub ExpandAllGroups()
```

C#

```
public override void ExpandAllGroups()
```

Remarks

To expand a group row, use the ExpandGroupRow method.

Parameters
rowHandle
An integer value that specifies the group row's handle. Group row handles are negative (starting from **-1**).
recursive
true , to expand any child group rows at all nesting levels; otherwise, **false**.

Return Value

true, if the specified group row has been expanded; otherwise, **false**.

GetCellValue Method

Returns the value of the specified data cell.

Overload List

Name	Description
object GetCellValue(int rowHandle, string fieldName)	Inherited from **DataControlBase**
object GetCellValue(int rowHandle, GridColumnBase column)	Returns the value of the specified data cell.

See Also

GridControl Members
DevExpress.UI.Xaml.Grid Namespace
GridControl.GetCellValue Overload List

Returns the value of the specified data cell.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function GetCellValue(
   ByVal rowHandle As Integer,
   ByVal column As GridColumnBase
) As Object
```
C#
```
public object GetCellValue(
   int rowHandle,
   GridColumnBase column
)
```

Parameters
rowHandle
An integer value that specifies the handle of the row that contains the cell.
column
A GridColumnBase descendant that is the column that owns the specified cell.

Return Value

An object that represents the specified cell's value.

DevExpress.UI.Xaml.Grid Namespace
GridControl.GetCellValueByListIndex Overload List

Returns the specified cell's value.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function GetCellValueByListIndex(
   ByVal listSourceRowIndex As Integer,
   ByVal fieldName As String
) As Object
```
C#
```
public object GetCellValueByListIndex(
   int listSourceRowIndex,
   string fieldName
)
```

Parameters
listSourceRowIndex
An integer value that identifies the row by the index of the corresponding record in a data source.
fieldName
A System.String value that specifies the field name of the column that contains the required cell.

Return Value

An object that is the specified cell's value.

See Also
GridControl Class

DataControlBase.GetCellValue

Returns the specified cell's value.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function GetCellValueByListIndex(
   ByVal listSourceRowIndex As Integer,
   ByVal column As GridColumnBase
) As Object
```

© 2018 Developer Express Inc.

C#

```
public object GetCellValueByListIndex(
   int listSourceRowIndex,
   GridColumnBase column
)
```

Parameters

listSourceRowIndex
An integer value that identifies the record in a data source by its index.
column
A GridColumnBase descendant that is the column that owns the specified cell.

Return Value

An object that is the specified cell's value.

GetChildRowCount Method

Returns the number of child rows (group or data) contained within the specified group row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetChildRowCount(
   ByVal rowHandle As Integer
) As Integer
```

C#

```
public int GetChildRowCount(
   int rowHandle
)
```

Parameters

rowHandle
An integer value that specifies the group row's handle.

Return Value

An integer value that specifies the number of child rows contained within the specified group row.

Remarks

Group row handles are negative (start from **-1**). If the specified handle doesn't correspond to a group row, the **GetChildRowCount** method returns **0**.

See Also

© 2018 Developer Express Inc.

GetChildRowHandle Method

Returns the handle of the row contained within the specified group row, at the specified position.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetChildRowHandle(
   ByVal rowHandle As Integer,
   ByVal childIndex As Integer
) As Integer
```

C#

```
public int GetChildRowHandle(
   int rowHandle,
   int childIndex
)
```

Parameters

rowHandle
An integer value that specifies the group row's handle.
childIndex
A zero-based integer that specifies the child row's position within the specified group row.

Return Value

An integer value that represents the handle of the row contained within the specified group row, at the specified position.

Remarks

Group row handles are negative (start from **-1**). The **GetChildRowHandle** method returns the invalid row handle (DataControlBase.InvalidRowHandle) if the specified group row doesn't contain a child row at the specified position. The invalid row handle is also returned if the specified row handle doesn't correspond to a group row.

GridControl.GetGroupRowValue Overload List

Returns the value of the specified group row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function GetGroupRowValue(
   ByVal rowHandle As Integer
) As Object
```
C#
```
public object GetGroupRowValue(
   int rowHandle
)
```

Parameters
rowHandle
An integer value that specifies the group row's handle.

Return Value

An object that represents the specified group row's value. **null** (**Nothing** in Visual Basic) if the specified group row doesn't exist.

Remarks

The **GetGroupRowValue** method returns the grouping column's value.

Group row handles are negative (start from **-1**).

DataControlBase.GetCellValue

Returns a value of the specified group row in the specified grouping column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic

© 2018 Developer Express Inc.

```
Public Function GetGroupRowValue(
   ByVal rowHandle As Integer,
   ByVal column As GridColumnBase
) As Object
```

C#

```
public object GetGroupRowValue(
   int rowHandle,
   GridColumnBase column
)
```

Parameters

rowHandle
An integer value that specifies the group row's handle.
column
A GridColumnBase descendant that represents a grouping column.

Return Value

An object that represents the specified group row's value. **null** (**Nothing** in Visual Basic) if the specified group row doesn't exist.

Remarks

The **GetGroupRowValue** method returns the grouping column's value.

Group row handles are negative (start from **-1**).

GetListIndexByRowHandle Method

Returns the specified data row's index in a data source.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetListIndexByRowHandle(
   ByVal rowHandle As Integer
) As Integer
```

C#

```
public int GetListIndexByRowHandle(
   int rowHandle
)
```

Parameters

rowHandle
An integer value that specifies the data row's handle.

Return Value

An integer value that specifies the index of the corresponding record in a data source.

See Also

GridControl Class
GridControl Members
DevExpress.UI.Xaml.Grid Namespace
GetRowHandleByListIndex

© 2018 Developer Express Inc.

GetParentRowHandle Method

Determines a particular row's parent group row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetParentRowHandle(
   ByVal rowHandle As Integer
) As Integer
```

C#

```
public int GetParentRowHandle(
   int rowHandle
)
```

Parameters

rowHandle
The handle of the row whose parent row's handle is to be obtained.

Return Value

The handle of the parent group row for the specified child row.

Remarks

When grouping is applied to a view, group and data rows form a hierarchy. Data rows are at the bottom hierarchy level. Using the **GetParentRowHandle** method for data rows will return handles of group rows. The method can be used to go further to the top of the hierarchy. Using the **GetParentRowHandle** for root group rows returns the value of the DataControlBase.InvalidRowHandle property.

GetRow Method

Returns an object in a data source that corresponds to the specified row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetRow(
   ByVal rowHandle As Integer
) As Object
```

C#

```
public object GetRow(
   int rowHandle
)
```

Parameters

rowHandle
An integer value that specifies the row's handle.

Return Value

A data object that corresponds to the specified row.

Remarks

Row objects represent records in a data source. For instance, a System.Data.DataRow object represents a record in a System.Data.DataTable.

GetRowByListIndex Method

Returns an object that represents the specified row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetRowByListIndex(
   ByVal listSourceRowIndex As Integer
) As Object
```

C#

```
public object GetRowByListIndex(
   int listSourceRowIndex
)
```

Parameters

listSourceRowIndex
A zero-based integer value that specifies the index of the corresponding record in a data source.

Return Value

An object that represents the specified row. **null** (**Nothing** in Visual Basic), if the specified row was not found.

GetRowHandleByListIndex Method

Returns the data row's handle by its index in a data source.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetRowHandleByListIndex(
   ByVal listIndex As Integer
) As Integer
```

C#

```
public int GetRowHandleByListIndex(
   int listIndex
)
```

Parameters

listIndex
An integer value that specifies the index of the corresponding record in a data source.

Return Value

An integer value that specifies the data row's handle.

GetRowHandleByVisibleIndex Method

Returns a row's handle by specifying its visible index.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetRowHandleByVisibleIndex(
   ByVal visibleIndex As Integer
) As Integer
```

C#

```
public int GetRowHandleByVisibleIndex(
   int visibleIndex
)
```

Parameters

visibleIndex
An integer value that specifies the row's visible position within a grid.

Return Value

An integer value that specifies the handle of the specified row.

GetRowVisibleIndexByHandle Method

Returns the row's position within a grid by its handle.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetRowVisibleIndexByHandle(
   ByVal rowHandle As Integer
) As Integer
```

C#

```
public int GetRowVisibleIndexByHandle(
   int rowHandle
)
```

Parameters

rowHandle
An integer value that specifies the row's handle.

Return Value

An integer value that specifies the specified row's position within a grid.

GetSelectedItem Method

Returns the currently selected row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetSelectedItem() As Object
```

C#

```
public object GetSelectedItem()
```

Return Value

An object that corresponds to the selected row.

Remarks

To obtain a row object that corresponds to a row with the specified handle, use the GetRow method.

Returns the value of the specified cell contained within the focused row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function GetSelectedItemCellValue(
   ByVal column As GridColumnBase
) As Object
```
C#
```
public object GetSelectedItemCellValue(
   GridColumnBase column
)
```

Parameters
column
A GridColumnBase descendant that represents the column.

Return Value

An object that represents the specified cell's value.

See Also
GridControl Class

DataControlBase.GetCellValue

Returns the value of the specified cell contained within the selected row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Function GetSelectedItemCellValue(
   ByVal fieldName As String
) As Object
```
C#
```
public object GetSelectedItemCellValue(
   string fieldName
)
```

© 2018 Developer Express Inc.

Parameters
fieldName
A System.String value that specifies the column's field name.

Return Value

An object that represents the specified cell's value.

GroupBy Method

Groups data by the values of the specified column.

Overload List

Name	Description
void GroupBy(string fieldName)	Groups data by the values of the specified column.
void GroupBy(GridColumnBase column)	Groups data by the values of the specified column.
void GroupBy(GridColumnBase column, int groupedIndex)	Groups data by the values of the specified column. If several columns are involved in grouping, the specified column will reside at the specified grouping level.
void GroupBy(GridColumnBase column, ColumnSortOrder sortedOrder)	Groups data by the values of the specified column with the specified sort order.
void GroupBy(GridColumnBase column, ColumnSortOrder sortedOrder, int groupedIndex)	Groups data by the values of the specified column with the specified sort order. If several columns are involved in grouping, the specified column will reside at the specified grouping level.

See Also
GridControl Class
GridControl Members
DevExpress.UI.Xaml.Grid Namespace
GridControl.GroupBy Overload List

Groups data by the values of the specified column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub GroupBy(
   ByVal fieldName As String
)
```
C#
```
public void GroupBy(
   string fieldName
)
```

Parameters
fieldName
A System.String value that specifies the column's field name.

Remarks

The Grid Control supports data grouping by an unlimited number of columns. The **GroupBy** method groups data by the values of the specified column.

Data rows are always sorted against the grouping columns. If data is grouped against a column which isn't sorted, the grid automatically applies sorting in ascending order to this column.

UngroupBy

© 2018 Developer Express Inc.

Groups data by the values of the specified column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub GroupBy(
   ByVal column As GridColumnBase
)
```
C#
```
public void GroupBy(
   GridColumnBase column
)
```

Parameters
column
A GridColumnBase descendant that specifies the column.

Remarks

Data rows are always sorted against the grouping columns. If data is grouped against a column which isn't sorted, the grid automatically applies sorting in ascending order to this column.

To learn more, see Grouping Overview.

GridControl.GroupBy Overload List

Groups data by the values of the specified column. If several columns are involved in grouping, the specified column will reside at the specified grouping level.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub GroupBy(
   ByVal column As GridColumnBase,
   ByVal groupedIndex As Integer
)
```
C#
```
public void GroupBy(
   GridColumnBase column,
   int groupedIndex
)
```

Parameters
column
A GridColumnBase descendant that specifies the column.
groupedIndex
A zero-based integer value that specifies the grouping level. If negative, an exception is raised.

Remarks

Data rows are always sorted against the grouping columns. If data is grouped against a column which isn't sorted, the grid automatically applies sorting in ascending order to this column.

To learn more, see Grouping Overview.

GridControl.GroupBy Overload List

Groups data by the values of the specified column with the specified sort order.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub GroupBy(
   ByVal column As GridColumnBase,
   ByVal sortedOrder As ColumnSortOrder
)
```
C#
```
public void GroupBy(
   GridColumnBase column,
   ColumnSortOrder sortedOrder
)
```

Parameters
column
A GridColumnBase descendant that specifies the column.
sortedOrder
A ColumnSortOrder enumeration value that specifies the column's sort order.

Remarks

Data rows are always sorted against the grouping columns. If data is grouped against a column which isn't sorted, the grid automatically applies sorting in ascending order to this column.

To learn more, see Grouping Overview.

Groups data by the values of the specified column with the specified sort order. If several columns are involved in grouping, the specified column will reside at the specified grouping level.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub GroupBy(
   ByVal column As GridColumnBase,
   ByVal sortedOrder As ColumnSortOrder,
   ByVal groupedIndex As Integer
)
```
C#
```
public void GroupBy(
   GridColumnBase column,
   ColumnSortOrder sortedOrder,
   int groupedIndex
)
```

Parameters
column
A GridColumnBase descendant that specifies the column.
sortedOrder
A ColumnSortOrder enumeration value that specifies the column's sort order.
groupedIndex
A zero-based integer value that specifies the grouping level. If negative, an exception is raised.

Remarks

© 2018 Developer Express Inc.

Data rows are always sorted against the grouping columns. If data is grouped against a column which isn't sorted, the grid automatically applies sorting in ascending order to this column.

To learn more, see Grouping Overview.

IsGroupRowExpanded Method

Indicates whether the specified group row is expanded.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function IsGroupRowExpanded(
   ByVal rowHandle As Integer
) As Boolean
```

C#

```
public bool IsGroupRowExpanded(
   int rowHandle
)
```

Parameters

rowHandle
An integer value that specifies the row's handle. Group row handles are negative (starting from **-1**).

Return Value

true if the specified row is expanded; otherwise, **false**.

See Also

GridControl Class

CollapseGroupRow
ExpandAllGroups
CollapseAllGroups

© 2018 Developer Express Inc.

IsRowVisible Method

Indicates whether the specified row is visible.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function IsRowVisible(
   ByVal rowHandle As Integer
) As Boolean
```

C#

```
public bool IsRowVisible(
   int rowHandle
)
```

Parameters

rowHandle
An integer value that specifies the row's handle.

Return Value

true if the specified row is visible; otherwise, **false**.

Remarks

The **IsRowVisible** method returns **false** in the following cases:

- The specified row is invalid.
- The specified row is hidden within a collapsed group row.

To obtain the total number of visible rows, use the DataControlBase.VisibleRowCount property.

IsValidRowHandle

© 2018 Developer Express Inc.

IsValidRowHandle Method

Indicates whether the specified row handle is valid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function IsValidRowHandle(
   ByVal rowHandle As Integer
) As Boolean
```

C#

```
public bool IsValidRowHandle(
   int rowHandle
)
```

Parameters

rowHandle
An integer value that specifies the row's handle.

Return Value

true if the specified row handle is valid; otherwise, **false**.

Remarks

An invalid row handle corresponds to a row which doesn't exist in a grid. Its handle is returned by the DataControlBase.InvalidRowHandle property.

MoveNextPage Method

Moves focus forward to the bottom row displayed onscreen within a grid.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Sub MoveNextPage()
```

C#

```
public override void MoveNextPage()
```

Remarks

To use the **MoveNextPage** method, the DataControlBase.NavigationStyle property should be set to GridControlNavigationStyle.Row or GridControlNavigationStyle.Cell.

To scroll the grid without moving focus, use the ScrollIntoView method.

MoveNextRow Method

Moves focus to the row following the one currently focused.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Sub MoveNextRow()
```

C#

```
public override void MoveNextRow()
```

Remarks

To use the **MoveNextRow** method, the DataControlBase.NavigationStyle property should be set to GridControlNavigationStyle.Row or GridControlNavigationStyle.Cell.

To scroll the grid without moving focus, use the ScrollIntoView method.

GridControl.ScrollIntoView Overload List

Makes the specified row visible onscreen.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Sub ScrollIntoView(
   ByVal rowHandle As Integer
)
```
C#
```
public override void ScrollIntoView(
   int rowHandle
)
```

Parameters
rowHandle
An integer value that specifies the row's handle.

Remarks

Note
The **ScrollIntoView** method does not move focus to the specified row.

SetSelectedItemUnboundColumnValue Method

Sets the value of the specified unbound column cell contained within the selected row.

Overload List

Name	Description
void SetSelectedItemUnboundColumnValue(GridColumnBase column, object value)	Sets the value of the specified unbound column cell contained within the selected row.
void SetSelectedItemUnboundColumnValue(string fieldName, object value)	Sets the value of the specified unbound column value in the selected item.

See Also
GridControl Class
GridControl Members
DevExpress.UI.Xaml.Grid Namespace
GridControl.SetSelectedItemUnboundColumnValue Overload List

Sets the value of the specified unbound column cell contained within the selected row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub SetSelectedItemUnboundColumnValue(
   ByVal column As GridColumnBase,
   ByVal value As Object
)
```
C#
```
public void SetSelectedItemUnboundColumnValue(
   GridColumnBase column,
   object value
)
```

Parameters
column
A GridColumnBase object representing the unbound column that contains the cell.
value
An object that represents the specified cell's new value.

See Also
GridControl Class
GridControl Members
DevExpress.UI.Xaml.Grid Namespace

Syntax
Visual Basic
```
Public Sub SetSelectedItemUnboundColumnValue(
   ByVal fieldName As String,
   ByVal value As Object
)
```
C#

© 2018 Developer Express Inc.

```
public void SetSelectedItemUnboundColumnValue(
   string fieldName,
   object value
)
```

Parameters
fieldName
A System.String value that specifies the column's field name.
value
An object that represents the specified cell's new value.

SetUnboundColumnValue Method

Sets the value of the specified unbound column cell.

Overload List

Name	Description
void SetUnboundColumnValue(int rowHandle, GridColumnBase column, object value)	Sets the value of the specified unbound column cell.
void SetUnboundColumnValue(int rowHandle, string fieldName, object value)	Sets the specified unbound column cell value.

See Also
GridControl Class
GridControl Members
DevExpress.UI.Xaml.Grid Namespace
GridControl.SetUnboundColumnValue Overload List

Sets the value of the specified unbound column cell.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub SetUnboundColumnValue(
   ByVal rowHandle As Integer,
   ByVal column As GridColumnBase,
   ByVal value As Object
)
```
C#
```
public void SetUnboundColumnValue(
   int rowHandle,
   GridColumnBase column,
   object value
)
```

Parameters
rowHandle
A zero based integer value that specifies the handle of the row which contains the cell.
column
A GridColumnBase object representing the unbound column that contains the cell.
value
An object that represents the cell's new value.

DevExpress.UI.Xaml.Grid Namespace
GridControl.SetUnboundColumnValue Overload List

Sets the specified unbound column cell value.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub SetUnboundColumnValue(
   ByVal rowHandle As Integer,
   ByVal fieldName As String,
   ByVal value As Object
)
```

© 2018 Developer Express Inc.

C#

```
public void SetUnboundColumnValue(
   int rowHandle,
   string fieldName,
   object value
)
```

Parameters

rowHandle
A zero-based integer value that specifies the handle of the item that contains the cell.
fieldName
A System.String value that specifies the column's field name.
value
An object that represents the cell's new value.

SortBy Method

Sorts data by the values of the specified column.

Overload List

Name	Description
void SortBy(GridColumnBase column)	Sorts data by the values of the specified column.
void SortBy(string fieldName)	Inherited from **DataControlBase**
void SortBy(GridColumnBase column, ColumnSortOrder sortedOrder)	Sorts data by the values of the specified column in the specified order.
void SortBy(GridColumnBase column, ColumnSortOrder sortedOrder, int sortedIndex)	Sorts data by the values of the specified column in the specified order, and places the column at the specified position among the sorted columns.

See Also
GridControl Class
GridControl Members
DevExpress.UI.Xaml.Grid Namespace
GridControl.SortBy Overload List

Sorts data by the values of the specified column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub SortBy(
   ByVal column As GridColumnBase
)
```
C#
```
public void SortBy(
   GridColumnBase column
)
```

Parameters
column
A GridColumnBase descendant that represents the column within the grid.

Remarks

The grid control allows data sorting by multiple columns. Any previous sorting is not cleared when calling the **SortBy** method.

End-users are allowed to sort data if the grid's DataControlBase.AllowSorting property is set to **true**.
To learn more, see Sorting.

```
Public Sub SortBy(
   ByVal column As GridColumnBase,
   ByVal sortedOrder As ColumnSortOrder
)
```
C#
```
public void SortBy(
   GridColumnBase column,
   ColumnSortOrder sortedOrder
)
```

Parameters
column
A GridColumnBase descendant that represents the column within the grid.
sortedOrder
A ColumnSortOrder enumeration value that specifies the column's sort order.

Remarks

The grid control allows data sorting by multiple columns. Any previous sorting is not cleared when calling the **SortBy** method.

End-users are allowed to sort data if the grid's DataControlBase.AllowSorting property is set to **true**.
To learn more, see Sorting.

Sorts data by the values of the specified column in the specified order, and places the column at the specified position among the sorted columns.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub SortBy(
   ByVal column As GridColumnBase,
   ByVal sortedOrder As ColumnSortOrder,
   ByVal sortedIndex As Integer
)
```
C#
```
public void SortBy(
   GridColumnBase column,
   ColumnSortOrder sortedOrder,
   int sortedIndex
)
```

Parameters
column
A GridColumnBase descendant that represents the column within the grid.
sortedOrder
A ColumnSortOrder enumeration value that specifies the column's sort order.
sortedIndex
An integer value that specifies the zero-based column's index among the sorted columns.

Remarks

The grid control allows data sorting by multiple columns. Any previous sorting is not cleared when calling the **SortBy** method.

End-users are allowed to sort data if the grid's DataControlBase.AllowSorting property is set to **true**.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Sub UngroupBy(
   ByVal fieldName As String
)
```
C#
```
public void UngroupBy(
   string fieldName
)
```

Parameters
fieldName
A System.String value that specifies the column's field name.

Remarks

To group data in code, use the GroupBy method.

GridControlBase Class

Serves as the base class for data-aware controls (e.g., GridControl).

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridControlBase Inherits DataControlBase
```

C#

```
public abstract class GridControlBase : DataControlBase
```

Remarks

The **GridControlBase** provides the basic functionality common to the GridControl.

GridControlBase Members

Serves as the base class for data-aware controls (e.g., GridControl).

The following tables list the members exposed by the GridControlBase type.

Public Properties

	Name	Description
	ActiveEditor	Gets the active editor. This is a dependency property. (Inherited from **DataControlBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowFilterPanel	Gets whether the filter panel is displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by column. This is a dependency property. (Inherited from **DataControlBase**)
	AllowColumnMoving	Gets or sets whether an end-user is allowed to move columns by dragging their headers. This is a dependency property. (Inherited from **DataControlBase**)
	AllowCommitOnValidationAttributeError	Gets or sets whether or not a cell's value that has failed validation specified by the Data Annotations attribute(s), can be posted to a data source. This is a dependency property. (Inherited from **DataControlBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users are allowed to change cell values. This is a dependency property. (Inherited from **DataControlBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data. This is a dependency property.

© 2018 Developer Express Inc.

	AllowLeaveInvalidEditor	Gets or sets whether an editor that did not pass validation can lose focus. This is a dependency property. (Inherited from **DataControlBase**)
	AllowSorting	Gets or sets whether an end-user can sort data. This is a dependency property. (Inherited from **DataControlBase**)
	AutoGenerateColumns	Gets or sets whether columns should be created automatically for all fields in a data source. This is a dependency property. (Inherited from **DataControlBase**)
	AutoScrollOnSorting	Gets or sets whether a grid is automatically scrolled after the order of rows has been changed. This is a dependency property. (Inherited from **DataControlBase**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BottomAdditionalRowsCount	(Inherited from **DataControlBase**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style applied to data cells displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnHeaderStyle	Gets or sets the column header's style. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderTemplate	Gets or sets the template that defines the presentation of column header content. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderToolTipTemplate	Gets or sets the template that defines the presentation of a column header's tooltip. This is a dependency property. (Inherited from **DataControlBase**)
	Commands	Provides access to grid commands. This is a dependency property. (Inherited from **DataControlBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CurrentColumn	Gets or sets the focused column.
	CurrentGrid	Gets or sets the data control currently used within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	CurrentItem	Gets or sets the currently focused data row. (Inherited from **DataControlBase**)
	CurrentViewChangedListener	This member supports the internal infrastructure and cannot be used directly from your code. This is a dependency property. (Inherited from **DataControlBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElem**

© 2018 Developer Express Inc.

		ent)
S	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FilterCriteria	Gets or sets the grid's filter criteria. This is a dependency property. (Inherited from **DataControlBase**)
	FilterPanelText	Gets the text displayed within the Filter Panel. This is a dependency property. (Inherited from **DataControlBase**)
	FilterString	Gets or sets the grid's filter expression. This is a dependency property. (Inherited from **DataControlBase**)
	FixedSummariesLeft	Gets total summaries displayed within the Fixed Summary Panel and aligned to the left. (Inherited from **DataControlBase**)
	FixedSummariesRight	Gets total summaries displayed within the Fixed Summary Panel and aligned to the right. (Inherited from **DataControlBase**)
	FixedTotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property. (Inherited from **DataControlBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusedBorderTemplate	Gets or sets the template that defines the presentation of a focused row's border. This is a dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GroupSummaryContentStyle	Gets or sets the style applied to group summary items. This is a dependency property.
	GroupSummaryItemTemplate	Gets or sets the template that defines the presentation of summary items displayed within group rows. This is a dependency property.
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values

© 2018 Developer Express Inc.

		displayed within group rows. This is a dependency property.
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property.
	HasValidationError	Gets whether a validation error has been defined for the grid. This is a dependency property. (Inherited from **DataControlBase**)
	HeadersData	Gets the information about column headers. (Inherited from **DataControlBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IncrementalLoadingThreshold	Gets or sets the threshold range that governs when the grid will begin to prefetch more row items. This is a dependency property. (Inherited from **DataControlBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEditing	Gets whether the focused cell is currently being edited. This is a dependency property. (Inherited from **DataControlBase**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	IsFilterEnabled	Gets or sets whether the current filter is enabled. This is a dependency property. (Inherited from **DataControlBase**)
	IsFocused	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsGroupPanelVisible	Gets whether the Group Panel is visible.
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsKeyboardFocusWithin	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsLoaded	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsMouseOver	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSynchronizedWithCurrentItem	Gets or sets whether a grid should keep the DataControlBase.SelectedItem synchronized with the current item in the Windows.UI.Xaml.Data.ICollectionView. This is a dependency property. (Inherited from **DataControlBase**)
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemClickCommand	Gets or sets the command to invoke when an item is clicked. (Inherited from **DataControlBase**)
	ItemNavigationMode	Gets or sets whether a single or double tap is needed to navigate to an item. (Inherited from **DataControlBase**)
	ItemNavigationTargetParameterBinding	Gets or sets a binding that defines a parameter to be passed to the target page, invoked when clicking an item. (Inherited from **DataControlBase**)
	ItemNavigationTargetType	Allows you to specify a page to be opened when an end-user clicks an item. (Inherited from **DataControlBase**)
	ItemsSource	Gets or sets the grid's data source. This is a dependency property. (Inherited from **DataControlBase**)
	KeepFocusedRowOnUpdate	Gets or sets whether the currently selected row retains focus when data is sorted, grouped or filtered. (Inherited from **DataControlBase**)
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	SearchColumns	Gets or sets the field names against which searches are performed by the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SearchDelay	Gets or sets the amount of time in milliseconds, after which a data search is initiated (in an automatic find mode). This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelAllowFilter	Gets or sets whether the grid displays only those records that match the search criteria. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelClearOnClose	Gets or sets whether or not the search string is cleared when closing the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelCloseDelay	Gets or sets the amount of time, in milliseconds, after which a Search Panel that doesn't contain any search criteria is closed. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelCriteriaOperatorType	Gets or sets the logical operator type (AND or OR). This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelFindFilter	Gets or sets the type of the comparison operator used to create filter conditions. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelFindMode	Gets or sets whether data searching starts automatically, or must be started manually. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelHighlightingSettings	Gets or sets the font settings used to highlight the text that matches the search criteria. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelHighlightResults	Gets or sets whether to highlight search results within located records. This is a dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	SearchString	Gets or sets the search string specified within the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SelectedItem	Get or sets the currently focused data item. (Inherited from **DataControlBase**)
	SelectedItemHandle	Gets or sets the selected item's handle. This is a dependency property. (Inherited from **DataControlBase**)
	SelectedItems	Gets data objects that correspond to items currently selected within a grid. (Inherited from **DataControlBase**)
	SelectionMode	Gets or sets whether multiple row/cell selection is enabled. This is a dependency property. (Inherited from **DataControlBase**)
	ShowColumnHeaders	Gets or sets whether a grid displays column headers. This is a dependency property. (Inherited from **DataControlBase**)
	ShowFilterPanelMode	Gets or sets when the Filter Panel is displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowFixedTotalSummary	Gets or sets whether or not the Fixed Summary Panel is displayed within the grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowGroupedColumns	Gets or sets whether the grouped columns are displayed within a grid. This is a dependency property.
	ShowGroupPanel	Gets or sets a value specifying whether the Group Panel is displayed.
	ShowSearchPanelMode	Gets or sets when the Search Panel is shown within the grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowTotalSummary	Gets or sets whether to display the total summary panel. (Inherited from **DataControlBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **DataControlBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	SummariesIgnoreNullValues	Gets or sets whether null values must be ignored when calculating data summaries. This is a dependency property. (Inherited from **DataControlBase**)
	TabIndex	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabIndexProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigation	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabNavigationProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Tag	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Template	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TotalSummaryContentStyle	Gets or sets the style applied to total summary items displayed within a View. This is a dependency property. (Inherited from **DataControlBase**)
	TotalSummaryData	Gets information about the total summary. (Inherited from **DataControlBase**)
	TotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property. (Inherited from **DataControlBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseSystemFocusVisuals	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	UseSystemFocusVisualsProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ValidationError	Provides access to the object, which contains information about the validation error. This is a dependency property. (Inherited from **DataControlBase**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	VerticalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VirtualizingCacheHeight	Gets or sets the height of buffer areas above and below the visible area of the grid to be rendered. (Inherited from **DataControlBase**)
	VirtualizingCacheWidth	Gets or sets the width of buffer areas above and below the visible area of the grid to be rendered. This is a dependency property. (Inherited from **DataControlBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibleColumns	Gets the list of visible columns. This is a dependency property.
	VisibleRowCount	Gets the total number of rows displayed within the grid. (Inherited from **DataControlBase**)
	Width	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description
	AddHandler	(Inherited from **DevExpress.Core.Native.DXControl**)
	ApplyTemplate	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	BeginDataUpdate	Prevents visual and internal data updates until the DataControlBase.EndDataUpdate method is called. (Inherited from **DataControlBase**)
	BeginInit	Starts the control's runtime initialization. (Inherited from **DataControlBase**)
	BeginSelection	Prevents selection updates until the DataControlBase.EndSelection method is called. (Inherited from **DataControlBase**)
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)
	CapturePointer	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClearColumnFilter	Overloaded. Removes the filter condition applied to the specified column. (Inherited from **DataControlBase**)
	ClearSorting	Clears the sorting applied to the grid. (Inherited from **DataControlBase**)
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CollapseAllGroups	Collapses all group rows. (Inherited from **DataControlBase**)
	CommitEditing	Hides the active editor and posts all the changes made within the focused row to a data source if the row values are valid. (Inherited from **DataControlBase**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	DeleteRow	Deletes the specified data row.

© 2018 Developer Express Inc.

	EndDataUpdate	Enables visual and internal data updates after the DataControlBase.BeginDataUpdate method call, and updates the grid. (Inherited from **DataControlBase**)
	EndInit	Ends the runtime initialization. (Inherited from **DataControlBase**)
	EndSelection	Enables selection updates after calling the DataControlBase.BeginSelection method, and forces an immediate update. (Inherited from **DataControlBase**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	Equals	(Inherited from **System.Object**)
	ExpandAllGroups	Expands all group rows. (Inherited from **DataControlBase**)
	FindName	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Focus	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetBindingExpression	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GetCellElementByRowHandleAndColumn	Returns the specified cell's UI element. (Inherited from **DataControlBase**)
	GetCellElementByTreeElement	Returns a cell that contains the specified tree element. (Inherited from **DataControlBase**)
	GetCellValue	Returns the value of the specified data cell. (Inherited from **DataControlBase**)
	GetColumnByTreeElement	Returns a column whose cell contains the specified tree element. (Inherited from **DataControlBase**)
	GetColumnFilterCriteria	Overloaded. Returns a filter applied to the specified column. (Inherited from **DataControlBase**)
	GetColumnFilterString	Overloaded. Returns a filter expression applied to the specified column. (Inherited from **DataControlBase**)
S	GetCurrentGrid	Gets the value of the DataControlBase.CurrentGrid attached property for a specified

© 2018 Developer Express Inc.

		Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	GetCurrentViewChangedListener	Gets the value of the DataControlBase.CurrentViewChanged Listener attached property for a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices. WindowsRuntime.RuntimeClass**)
S	GetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetRowElementByRowHandle	Returns a UI element that is the specified row. (Inherited from **DataControlBase**)
	GetRowState	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **DataControlBase**)
	GetSelectedCells	Returns the selected data cells. (Inherited from **DataControlBase**)
	GetTotalSummaryValue	Returns the value of the specified total summary item. (Inherited from **DataControlBase**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	HideEditor	Closes the active editor, discarding all the changes made. (Inherited from **DataControlBase**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	InvalidateArrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidateMeasure	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsCellSelected	Indicates whether the specified cell is selected. (Inherited from **DataControlBase**)
	IsGroupRow	Indicates whether the specified index corresponds to a group row. For internal use only.
	IsItemSelected	Indicates whether the specified item is selected. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	LockFocus	(Inherited from **DevExpress.Core.Native.DXControl**)
	Measure	(Inherited from **Windows.UI.Xaml.UIElement**)
	MergeColumnFilters	Overloaded. Combines the specified filter with the grid's current filter with the AND operator. (Inherited from **DataControlBase**)
	MoveColumnTo	Moves the specified column to the specified position. (Inherited from **DataControlBase**)
	MoveFirstRow	Moves focus to the first visible row within a grid. (Inherited from **DataControlBase**)
	MoveLastRow	Moves focus to the last visible row within a grid. (Inherited from **DataControlBase**)
	MoveNextPage	Moves focus forward to the bottom row displayed onscreen within a grid. (Inherited from **DataControlBase**)
	MoveNextRow	Moves focus to the row following the one currently focused. (Inherited from **DataControlBase**)
	MovePrevPage	Moves focus backward to the top row displayed onscreen within a grid. (Inherited from **DataControlBase**)
	MovePrevRow	(Inherited from **DataControlBase**)
	MoveSelectedItem	Selects the specified item. (Inherited from **DataControlBase**)
	PopulateColumns	Creates columns for all fields in a bound data source. (Inherited from **DataControlBase**)
	PostEditor	Saves the active editor's value to a data source without closing the editor. (Inherited from **DataControlBase**)
	RaiseEvent	(Inherited from **DevExpress.Core.Native.DXControl**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RefreshData	Updates the control data. (Inherited from **DataControlBase**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReleasePointerCapture	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ReleasePointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	RemoveHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	ScrollIntoView	Overloaded. Makes the specified row visible onscreen. (Inherited from **DataControlBase**)
	SelectAll	Selects all items within a grid. (Inherited from **DataControlBase**)
	SelectCell	Selects the cell. (Inherited from **DataControlBase**)
	SelectCells	Selects multiple cells. (Inherited from **DataControlBase**)
	SelectItem	Overloaded. Selects the specified item. (Inherited from **DataControlBase**)
	SelectRange	Selects multiple items, while preserving the current selection (if any). (Inherited from **DataControlBase**)
	SetBinding	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	SetCurrentGrid	Sets the value of the DataControlBase.CurrentGrid attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetCurrentViewChangedListener	Sets the value of the DataControlBase.CurrentViewChangedListener attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ShowEditor	Activates the focused cell's inplace editor. (Inherited from **DataControlBase**)
	SortBy	Sorts data by the values of the specified column. (Inherited from **DataControlBase**)
	StartDragAsync	(Inherited from **Windows.UI.Xaml.UIElement**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

© 2018 Developer Express Inc.

	TransformToVisual	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TryStartDirectManipulation	(Inherited from **Windows.UI.Xaml.UIElement**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	UnselectAll	Unselects any selected items within a grid. (Inherited from **DataControlBase**)
	UnselectCell	Unselects the specified cell. (Inherited from **DataControlBase**)
	UnselectCells	Unselects the specified cells. (Inherited from **DataControlBase**)
	UnselectItem	Overloaded. Unselects the specified item. (Inherited from **DataControlBase**)
	UpdateLayout	(Inherited from **Windows.UI.Xaml.UIElement**)
	UpdateTotalSummary	Updates total summaries. (Inherited from **DataControlBase**)
	UpdateUnboundColumnValues	Updates unbound column values in the specified row. (Inherited from **DataControlBase**)

Public Fields

	Name	Description
S	ActiveEditorProperty	Identifies the ActiveEditor dependency property. (Inherited from **DataControlBase**)
S	ActualShowFilterPanelProperty	Identifies the ActualShowFilterPanel dependency property. (Inherited from **DataControlBase**)
S	AllowColumnFilteringProperty	Identifies the AllowColumnFiltering dependency property. (Inherited from **DataControlBase**)
S	AllowColumnMovingProperty	Identifies the AllowColumnMoving dependency property. (Inherited from **DataControlBase**)
S	AllowCommitOnValidationAttributeErrorProperty	Identifies the AllowCommitOnValidationAttributeError dependency property. (Inherited from **DataControlBase**)
S	AllowEditingProperty	Identifies the AllowEditing dependency property. (Inherited from **DataControlBase**)
S	AllowGroupingProperty	Identifies the AllowGrouping dependency property.

© 2018 Developer Express Inc.

S	AllowLeaveInvalidEditorProperty	Identifies the AllowLeaveInvalidEditor dependency property. (Inherited from **DataControlBase**)
S	AllowSortingProperty	Identifies the AllowSorting dependency property. (Inherited from **DataControlBase**)
S	AutoGenerateColumnsProperty	Identifies the AutoGenerateColumns dependency property. (Inherited from **DataControlBase**)
S	AutoScrollOnSortingProperty	Identifies the AutoScrollOnSorting dependency property. (Inherited from **DataControlBase**)
S	CellStyleProperty	Identifies the CellStyle dependency property. (Inherited from **DataControlBase**)
S	ColumnHeaderStyleProperty	Identifies the ColumnHeaderStyle dependency property. (Inherited from **DataControlBase**)
S	ColumnHeaderTemplateProperty	Identifies the ColumnHeaderTemplate dependency property. (Inherited from **DataControlBase**)
S	ColumnHeaderTemplateSelectorProperty	Identifies the ColumnHeaderTemplateSelector dependency property. (Inherited from **DataControlBase**)
S	ColumnHeaderToolTipTemplateProperty	Identifies the ColumnHeaderToolTipTemplate dependency property. (Inherited from **DataControlBase**)
S	CommandsProperty	Identifies the Commands dependency property. (Inherited from **DataControlBase**)
S	CurrentColumnProperty	Identifies the CurrentColumn dependency property.
S	CurrentGridProperty	Identifies the CurrentGrid dependency property. (Inherited from **DataControlBase**)
S	CurrentItemProperty	Identifies the CurrentItem dependency property. (Inherited from **DataControlBase**)
S	CurrentViewChangedListenerProperty	Identifies the CurrentViewChangedListener dependency property. (Inherited from **DataControlBase**)
S	FilterCriteriaProperty	Identifies the FilterCriteria dependency property. (Inherited from **DataControlBase**)
S	FilterPanelTextProperty	Identifies the FilterPanelText dependency property. (Inherited from **DataControlBase**)
S	FilterStringProperty	Identifies the FilterString dependency property. (Inherited from

		DataControlBase)
S	FixedTotalSummaryItemTemplateProperty	Identifies the FixedTotalSummaryItemTemplate dependency property. (Inherited from **DataControlBase**)
S	FocusedBorderTemplateProperty	Identifies the FocusedBorderTemplate dependency property. (Inherited from **DataControlBase**)
S	FocusVisualStyleProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	GroupSummaryContentStyleProperty	Identifies the GroupSummaryContentStyle dependency property.
S	GroupSummaryItemTemplateProperty	Identifies the GroupSummaryItemTemplate dependency property.
S	GroupValueTemplateProperty	Identifies the GroupValueTemplate dependency property.
S	GroupValueTemplateSelectorProperty	Identifies the GroupValueTemplateSelector dependency property.
S	HasValidationErrorProperty	Identifies the HasValidationError dependency property. (Inherited from **DataControlBase**)
S	IncrementalLoadingThresholdProperty	Identifies the IncrementalLoadingThreshold dependency property. (Inherited from **DataControlBase**)
S	InvalidRowHandle	Gets the handle of a row which does not exist in a grid. (Inherited from **DataControlBase**)
S	IsEditingProperty	Identifies the IsEditing dependency property. (Inherited from **DataControlBase**)
S	IsFilterEnabledProperty	Identifies the IsFilterEnabled dependency property. (Inherited from **DataControlBase**)
S	IsGroupPanelVisibleProperty	Identifies the IsGroupPanelVisible dependency property.
S	IsKeyboardFocusWithinProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	IsLoadedProperty	(Inherited from **DevExpress.Core.Native.DXControl**)
S	IsSynchronizedWithCurrentItemProperty	Identifies the IsSynchronizedWithCurrentItem dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

S	ItemClickCommandProperty	Identifies the ItemClickCommand dependency property. (Inherited from **DataControlBase**)
S	ItemNavigationModeProperty	Identifies the ItemNavigationMode dependency property. (Inherited from **DataControlBase**)
S	ItemNavigationTargetTypeProperty	Identifies the ItemNavigationTargetType dependency property. (Inherited from **DataControlBase**)
S	ItemsSourceProperty	Identifies the ItemsSource dependency property. (Inherited from **DataControlBase**)
S	KeepFocusedRowOnUpdateProperty	Identifies the KeepFocusedRowOnUpdate dependency property. (Inherited from **DataControlBase**)
S	NavigationStyleProperty	Identifies the NavigationStyle dependency property. (Inherited from **DataControlBase**)
S	PreserveSortingProperty	Identifies the PreserveSorting dependency property. (Inherited from **DataControlBase**)
S	SearchColumnsProperty	Identifies the SearchColumns dependency property. (Inherited from **DataControlBase**)
S	SearchDelayProperty	Identifies the SearchDelay dependency property. (Inherited from **DataControlBase**)
S	SearchPanelAllowFilterProperty	Identifies the SearchPanelAllowFilter dependency property. (Inherited from **DataControlBase**)
S	SearchPanelClearOnCloseProperty	Identifies the SearchPanelClearOnClose dependency property. (Inherited from **DataControlBase**)
S	SearchPanelCloseDelayProperty	Identifies the SearchPanelCloseDelay dependency property. (Inherited from **DataControlBase**)
S	SearchPanelCriteriaOperatorTypeProperty	Identifies the SearchPanelCriteriaOperatorType dependency property. (Inherited from **DataControlBase**)
S	SearchPanelFindFilterProperty	Identifies the SearchPanelFindFilter dependency property. (Inherited from **DataControlBase**)
S	SearchPanelFindModeProperty	Identifies the SearchPanelFindMode dependency property. (Inherited from **DataControlBase**)
S	SearchPanelHighlightingSettingsProperty	Identifies the SearchPanelHighlightingSettings dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

S	SearchPanelHighlightResultsProperty	Identifies the SearchPanelHighlightResults dependency property. (Inherited from **DataControlBase**)
S	SearchStringProperty	Identifies the SearchString dependency property. (Inherited from **DataControlBase**)
S	SelectedItemHandleProperty	Identifies the SelectedItemHandle dependency property. (Inherited from **DataControlBase**)
S	SelectedItemProperty	Identifies the SelectedItem dependency property. (Inherited from **DataControlBase**)
S	SelectedItemsProperty	Identifies the SelectedItems dependency property. (Inherited from **DataControlBase**)
S	SelectionModeProperty	Identifies the SelectionMode dependency property. (Inherited from **DataControlBase**)
S	ShowColumnHeadersProperty	Identifies the ShowColumnHeaders dependency property. (Inherited from **DataControlBase**)
S	ShowFilterPanelModeProperty	Identifies the ShowFilterPanelMode dependency property. (Inherited from **DataControlBase**)
S	ShowFixedTotalSummaryProperty	Identifies the ShowFixedTotalSummary dependency property. (Inherited from **DataControlBase**)
S	ShowGroupedColumnsProperty	Identifies the ShowGroupedColumns dependency property.
S	ShowGroupPanelProperty	Identifies the ShowGroupPanel dependency property.
S	ShowSearchPanelModeProperty	Identifies the ShowSearchPanelMode dependency property. (Inherited from **DataControlBase**)
S	ShowTotalSummaryProperty	Identifies the ShowTotalSummary dependency property. (Inherited from **DataControlBase**)
S	ShowValidationAttributeErrorsProperty	Identifies the ShowValidationAttributeErrors dependency property. (Inherited from **DataControlBase**)
S	SummariesIgnoreNullValuesProperty	Identifies the SummariesIgnoreNullValues dependency property. (Inherited from **DataControlBase**)
S	TotalSummaryContentStyleProperty	Identifies the TotalSummaryContentStyle dependency property. (Inherited from **DataControlBase**)
S	TotalSummaryItemTemplateProperty	Identifies the TotalSummaryItemTemplate

		dependency property. (Inherited from **DataControlBase**)
S	ValidationErrorProperty	Identifies the ValidationError dependency property. (Inherited from **DataControlBase**)
S	VirtualizingCacheHeightProperty	Identifies the VirtualizingCacheHeight dependency property. (Inherited from **DataControlBase**)
S	VirtualizingCacheWidthProperty	Identifies the VirtualizingCacheWidth dependency property. (Inherited from **DataControlBase**)
S	VisibleColumnsProperty	Identifies the VisibleColumns dependency property.

Public Events

	Name	Description
	AutoGeneratedColumns	Occurs after the columns have been automatically generated. (Inherited from **DataControlBase**)
	AutoGeneratingColumn	Occurs each time an individual column is auto-generated. (Inherited from **DataControlBase**)
	BeforeLayoutRefresh	Enables you to lock down end-user capabilities that affect the onscreen position of the focused row (e.g. moving row focus, row scrolling, sorting, etc.). (Inherited from **DataControlBase**)
	CellValueChanged	Occurs after a cell's value has been changed.
	CellValueChanging	Fires in response to changing the edit value.
	ColumnsPopulated	Obsolete. Occurs after the columns have been automatically generated. (Inherited from **DataControlBase**)
	CurrentColumnChanged	Occurs after the focused column has been changed. (Inherited from **DataControlBase**)
	CustomGroupDisplayText	Enables you to provide custom content for group rows.
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	Drop	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	FilterChanged	Occurs after the grid's filter has been changed. (Inherited from **DataControlBase**)
	GotFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	HiddenEditor	Occurs after a cell's editor has been closed.
	Holding	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidRowException	Fires when a row fails validation or when it cannot be saved to a data source.
	IsEnabledChanged	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemsSourceChanged	Occurs after the DataControlBase.ItemsSource property has been changed. (Inherited from **DataControlBase**)
	KeyDown	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUp	(Inherited from **Windows.UI.Xaml.UIElement**)
	LayoutUpdated	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loading	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LostFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDelta	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStarting	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ManipulationStarted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCanceled	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLost	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEntered	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExited	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMoved	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressed	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleased	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChanged	(Inherited from **Windows.UI.Xaml.UIElement**)
	PropertyChanged	Occurs every time any of the GridControlBase class properties have changed their value. (Inherited from **DataControlBase**)
	RightTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	SelectedItemChanged	Occurs after the selected item has been changed. (Inherited from **DataControlBase**)
	SelectionChanged	Occurs after grid's selection has been changed. (Inherited from **DataControlBase**)
	ShowFilterPopup	Enables you to customize a column's filter dropdown. (Inherited from **DataControlBase**)
	ShownEditor	Occurs after the focused cell's editor has been shown.
	SizeChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Tapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	Unloaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

GridControlBase Properties

Serves as the base class for data-aware controls (e.g., GridControl).

The following tables list the members exposed by the GridControlBase type.

Public Properties

	Name	Description
	ActiveEditor	Gets the active editor. This is a dependency property. (Inherited from **DataControlBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowFilterPanel	Gets whether the filter panel is displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by column. This is a dependency property. (Inherited from **DataControlBase**)
	AllowColumnMoving	Gets or sets whether an end-user is allowed to move columns by dragging their headers. This is a dependency property. (Inherited from **DataControlBase**)
	AllowCommitOnValidationAttributeError	Gets or sets whether or not a cell's value that has failed validation specified by the Data Annotations attribute(s), can be posted to a data source. This is a dependency property. (Inherited from **DataControlBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users are allowed to change cell values. This is a dependency property. (Inherited from **DataControlBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data. This is a dependency property.

© 2018 Developer Express Inc.

	AllowLeaveInvalidEditor	Gets or sets whether an editor that did not pass validation can lose focus. This is a dependency property. (Inherited from **DataControlBase**)
	AllowSorting	Gets or sets whether an end-user can sort data. This is a dependency property. (Inherited from **DataControlBase**)
	AutoGenerateColumns	Gets or sets whether columns should be created automatically for all fields in a data source. This is a dependency property. (Inherited from **DataControlBase**)
	AutoScrollOnSorting	Gets or sets whether a grid is automatically scrolled after the order of rows has been changed. This is a dependency property. (Inherited from **DataControlBase**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BottomAdditionalRowsCount	(Inherited from **DataControlBase**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style applied to data cells displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnHeaderStyle	Gets or sets the column header's style. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderTemplate	Gets or sets the template that defines the presentation of column header content. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **DataControlBase**)
	ColumnHeaderToolTipTemplate	Gets or sets the template that defines the presentation of a column header's tooltip. This is a dependency property. (Inherited from **DataControlBase**)
	Commands	Provides access to grid commands. This is a dependency property. (Inherited from **DataControlBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CurrentColumn	Gets or sets the focused column.
	CurrentGrid	Gets or sets the data control currently used within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	CurrentItem	Gets or sets the currently focused data row. (Inherited from **DataControlBase**)
	CurrentViewChangedListener	This member supports the internal infrastructure and cannot be used directly from your code. This is a dependency property. (Inherited from **DataControlBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElem**

© 2018 Developer Express Inc.

		ent)
S	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FilterCriteria	Gets or sets the grid's filter criteria. This is a dependency property. (Inherited from **DataControlBase**)
	FilterPanelText	Gets the text displayed within the Filter Panel. This is a dependency property. (Inherited from **DataControlBase**)
	FilterString	Gets or sets the grid's filter expression. This is a dependency property. (Inherited from **DataControlBase**)
	FixedSummariesLeft	Gets total summaries displayed within the Fixed Summary Panel and aligned to the left. (Inherited from **DataControlBase**)
	FixedSummariesRight	Gets total summaries displayed within the Fixed Summary Panel and aligned to the right. (Inherited from **DataControlBase**)
	FixedTotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property. (Inherited from **DataControlBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusedBorderTemplate	Gets or sets the template that defines the presentation of a focused row's border. This is a dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)

	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GroupSummaryContentStyle	Gets or sets the style applied to group summary items. This is a dependency property.
	GroupSummaryItemTemplate	Gets or sets the template that defines the presentation of summary items displayed within group rows. This is a dependency property.
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values

© 2018 Developer Express Inc.

		displayed within group rows. This is a dependency property.
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property.
	HasValidationError	Gets whether a validation error has been defined for the grid. This is a dependency property. (Inherited from **DataControlBase**)
	HeadersData	Gets the information about column headers. (Inherited from **DataControlBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IncrementalLoadingThreshold	Gets or sets the threshold range that governs when the grid will begin to prefetch more row items. This is a dependency property. (Inherited from **DataControlBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEditing	Gets whether the focused cell is currently being edited. This is a dependency property. (Inherited from **DataControlBase**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	IsFilterEnabled	Gets or sets whether the current filter is enabled. This is a dependency property. (Inherited from **DataControlBase**)
	IsFocused	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsGroupPanelVisible	Gets whether the Group Panel is visible.
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsKeyboardFocusWithin	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsLoaded	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsMouseOver	(Inherited from **DevExpress.Core.Native.DXControl**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSynchronizedWithCurrentItem	Gets or sets whether a grid should keep the DataControlBase.SelectedItem synchronized with the current item in the Windows.UI.Xaml.Data.ICollectionView. This is a dependency property. (Inherited from **DataControlBase**)
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemClickCommand	Gets or sets the command to invoke when an item is clicked. (Inherited from **DataControlBase**)
	ItemNavigationMode	Gets or sets whether a single or double tap is needed to navigate to an item. (Inherited from **DataControlBase**)
	ItemNavigationTargetParameterBinding	Gets or sets a binding that defines a parameter to be passed to the target page, invoked when clicking an item. (Inherited from **DataControlBase**)
	ItemNavigationTargetType	Allows you to specify a page to be opened when an end-user clicks an item. (Inherited from **DataControlBase**)
	ItemsSource	Gets or sets the grid's data source. This is a dependency property. (Inherited from **DataControlBase**)
	KeepFocusedRowOnUpdate	Gets or sets whether the currently selected row retains focus when data is sorted, grouped or filtered. (Inherited from **DataControlBase**)
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	SearchColumns	Gets or sets the field names against which searches are performed by the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SearchDelay	Gets or sets the amount of time in milliseconds, after which a data search is initiated (in an automatic find mode). This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelAllowFilter	Gets or sets whether the grid displays only those records that match the search criteria. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelClearOnClose	Gets or sets whether or not the search string is cleared when closing the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelCloseDelay	Gets or sets the amount of time, in milliseconds, after which a Search Panel that doesn't contain any search criteria is closed. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelCriteriaOperatorType	Gets or sets the logical operator type (AND or OR). This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelFindFilter	Gets or sets the type of the comparison operator used to create filter conditions. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelFindMode	Gets or sets whether data searching starts automatically, or must be started manually. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelHighlightingSettings	Gets or sets the font settings used to highlight the text that matches the search criteria. This is a dependency property. (Inherited from **DataControlBase**)
	SearchPanelHighlightResults	Gets or sets whether to highlight search results within located records. This is a dependency property. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	SearchString	Gets or sets the search string specified within the Search Panel. This is a dependency property. (Inherited from **DataControlBase**)
	SelectedItem	Get or sets the currently focused data item. (Inherited from **DataControlBase**)
	SelectedItemHandle	Gets or sets the selected item's handle. This is a dependency property. (Inherited from **DataControlBase**)
	SelectedItems	Gets data objects that correspond to items currently selected within a grid. (Inherited from **DataControlBase**)
	SelectionMode	Gets or sets whether multiple row/cell selection is enabled. This is a dependency property. (Inherited from **DataControlBase**)
	ShowColumnHeaders	Gets or sets whether a grid displays column headers. This is a dependency property. (Inherited from **DataControlBase**)
	ShowFilterPanelMode	Gets or sets when the Filter Panel is displayed within a grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowFixedTotalSummary	Gets or sets whether or not the Fixed Summary Panel is displayed within the grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowGroupedColumns	Gets or sets whether the grouped columns are displayed within a grid. This is a dependency property.
	ShowGroupPanel	Gets or sets a value specifying whether the Group Panel is displayed.
	ShowSearchPanelMode	Gets or sets when the Search Panel is shown within the grid. This is a dependency property. (Inherited from **DataControlBase**)
	ShowTotalSummary	Gets or sets whether to display the total summary panel. (Inherited from **DataControlBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **DataControlBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	SummariesIgnoreNullValues	Gets or sets whether null values must be ignored when calculating data summaries. This is a dependency property. (Inherited from **DataControlBase**)
	TabIndex	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabIndexProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigation	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabNavigationProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Tag	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Template	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TotalSummaryContentStyle	Gets or sets the style applied to total summary items displayed within a View. This is a dependency property. (Inherited from **DataControlBase**)
	TotalSummaryData	Gets information about the total summary. (Inherited from **DataControlBase**)
	TotalSummaryItemTemplate	Gets or sets the template that defines the presentation of total summary items. This is a dependency property. (Inherited from **DataControlBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)

S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseSystemFocusVisuals	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	UseSystemFocusVisualsProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ValidationError	Provides access to the object, which contains information about the validation error. This is a dependency property. (Inherited from **DataControlBase**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	VerticalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VirtualizingCacheHeight	Gets or sets the height of buffer areas above and below the visible area of the grid to be rendered. (Inherited from **DataControlBase**)
	VirtualizingCacheWidth	Gets or sets the width of buffer areas above and below the visible area of the grid to be rendered. This is a dependency property. (Inherited from **DataControlBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibleColumns	Gets the list of visible columns. This is a dependency property.
	VisibleRowCount	Gets the total number of rows displayed within the grid. (Inherited from **DataControlBase**)
	Width	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description
	AddHandler	(Inherited from **DevExpress.Core.Native.DXControl**)
	ApplyTemplate	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	BeginDataUpdate	Prevents visual and internal data updates until the DataControlBase.EndDataUpdate method is called. (Inherited from **DataControlBase**)
	BeginInit	Starts the control's runtime initialization. (Inherited from **DataControlBase**)
	BeginSelection	Prevents selection updates until the DataControlBase.EndSelection method is called. (Inherited from **DataControlBase**)
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)
	CapturePointer	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClearColumnFilter	Overloaded. Removes the filter condition applied to the specified column. (Inherited from **DataControlBase**)
	ClearSorting	Clears the sorting applied to the grid. (Inherited from **DataControlBase**)
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CollapseAllGroups	Collapses all group rows. (Inherited from **DataControlBase**)
	CommitEditing	Hides the active editor and posts all the changes made within the focused row to a data source if the row values are valid. (Inherited from **DataControlBase**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	DeleteRow	Deletes the specified data row.

© 2018 Developer Express Inc.

	EndDataUpdate	Enables visual and internal data updates after the DataControlBase.BeginDataUpdate method call, and updates the grid. (Inherited from **DataControlBase**)
	EndInit	Ends the runtime initialization. (Inherited from **DataControlBase**)
	EndSelection	Enables selection updates after calling the DataControlBase.BeginSelection method, and forces an immediate update. (Inherited from **DataControlBase**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	Equals	(Inherited from **System.Object**)
	ExpandAllGroups	Expands all group rows. (Inherited from **DataControlBase**)
	FindName	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Focus	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetBindingExpression	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GetCellElementByRowHandleAndColumn	Returns the specified cell's UI element. (Inherited from **DataControlBase**)
	GetCellElementByTreeElement	Returns a cell that contains the specified tree element. (Inherited from **DataControlBase**)
	GetCellValue	Returns the value of the specified data cell. (Inherited from **DataControlBase**)
	GetColumnByTreeElement	Returns a column whose cell contains the specified tree element. (Inherited from **DataControlBase**)
	GetColumnFilterCriteria	Overloaded. Returns a filter applied to the specified column. (Inherited from **DataControlBase**)
	GetColumnFilterString	Overloaded. Returns a filter expression applied to the specified column. (Inherited from **DataControlBase**)
S	GetCurrentGrid	Gets the value of the DataControlBase.CurrentGrid attached property for a specified

© 2018 Developer Express Inc.

		Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	GetCurrentViewChangedListener	Gets the value of the DataControlBase.CurrentViewChanged Listener attached property for a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices. WindowsRuntime.RuntimeClass**)
S	GetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetRowElementByRowHandle	Returns a UI element that is the specified row. (Inherited from **DataControlBase**)
	GetRowState	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **DataControlBase**)
	GetSelectedCells	Returns the selected data cells. (Inherited from **DataControlBase**)
	GetTotalSummaryValue	Returns the value of the specified total summary item. (Inherited from **DataControlBase**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	HideEditor	Closes the active editor, discarding all the changes made. (Inherited from **DataControlBase**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	InvalidateArrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidateMeasure	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsCellSelected	Indicates whether the specified cell is selected. (Inherited from **DataControlBase**)
	IsGroupRow	Indicates whether the specified index corresponds to a group row. For internal use only.
	IsItemSelected	Indicates whether the specified item is selected. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	LockFocus	(Inherited from **DevExpress.Core.Native.DXControl**)
	Measure	(Inherited from **Windows.UI.Xaml.UIElement**)
	MergeColumnFilters	Overloaded. Combines the specified filter with the grid's current filter with the AND operator. (Inherited from **DataControlBase**)
	MoveColumnTo	Moves the specified column to the specified position. (Inherited from **DataControlBase**)
	MoveFirstRow	Moves focus to the first visible row within a grid. (Inherited from **DataControlBase**)
	MoveLastRow	Moves focus to the last visible row within a grid. (Inherited from **DataControlBase**)
	MoveNextPage	Moves focus forward to the bottom row displayed onscreen within a grid. (Inherited from **DataControlBase**)
	MoveNextRow	Moves focus to the row following the one currently focused. (Inherited from **DataControlBase**)
	MovePrevPage	Moves focus backward to the top row displayed onscreen within a grid. (Inherited from **DataControlBase**)
	MovePrevRow	(Inherited from **DataControlBase**)
	MoveSelectedItem	Selects the specified item. (Inherited from **DataControlBase**)
	PopulateColumns	Creates columns for all fields in a bound data source. (Inherited from **DataControlBase**)
	PostEditor	Saves the active editor's value to a data source without closing the editor. (Inherited from **DataControlBase**)
	RaiseEvent	(Inherited from **DevExpress.Core.Native.DXControl**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RefreshData	Updates the control data. (Inherited from **DataControlBase**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReleasePointerCapture	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ReleasePointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	RemoveHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	ScrollIntoView	Overloaded. Makes the specified row visible onscreen. (Inherited from **DataControlBase**)
	SelectAll	Selects all items within a grid. (Inherited from **DataControlBase**)
	SelectCell	Selects the cell. (Inherited from **DataControlBase**)
	SelectCells	Selects multiple cells. (Inherited from **DataControlBase**)
	SelectItem	Overloaded. Selects the specified item. (Inherited from **DataControlBase**)
	SelectRange	Selects multiple items, while preserving the current selection (if any). (Inherited from **DataControlBase**)
	SetBinding	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	SetCurrentGrid	Sets the value of the DataControlBase.CurrentGrid attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetCurrentViewChangedListener	Sets the value of the DataControlBase.CurrentViewChangedListener attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ShowEditor	Activates the focused cell's inplace editor. (Inherited from **DataControlBase**)
	SortBy	Sorts data by the values of the specified column. (Inherited from **DataControlBase**)
	StartDragAsync	(Inherited from **Windows.UI.Xaml.UIElement**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

© 2018 Developer Express Inc.

	TransformToVisual	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TryStartDirectManipulation	(Inherited from **Windows.UI.Xaml.UIElement**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	UnselectAll	Unselects any selected items within a grid. (Inherited from **DataControlBase**)
	UnselectCell	Unselects the specified cell. (Inherited from **DataControlBase**)
	UnselectCells	Unselects the specified cells. (Inherited from **DataControlBase**)
	UnselectItem	Overloaded. Unselects the specified item. (Inherited from **DataControlBase**)
	UpdateLayout	(Inherited from **Windows.UI.Xaml.UIElement**)
	UpdateTotalSummary	Updates total summaries. (Inherited from **DataControlBase**)
	UpdateUnboundColumnValues	Updates unbound column values in the specified row. (Inherited from **DataControlBase**)

Public Fields

	Name	Description
S	ActiveEditorProperty	Identifies the ActiveEditor dependency property. (Inherited from **DataControlBase**)

AllowGrouping Property

Gets or sets a value that specifies whether an end-user can group data. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowGrouping As Boolean
```

C#

```
public bool AllowGrouping { get; set; }
```

Property Value

true, to allow an end-user to group data; otherwise, **false**.

Remarks

End-users can group data by dragging a column header to the group panel (requires the ShowGroupPanel property to be set to **true** and the **AllowGrouping** property to be set to **true**).

Individual columns provide the GridColumnBase.AllowGrouping property, allowing the default behavior specified by the grid to be overridden. To learn more, see Grouping.

Note
Data grouping requires data sorting to be performed. End-users can group data only if data sorting is allowed.

CurrentColumn Property

Gets or sets the focused column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property CurrentColumn As GridColumnBase
```

C#

```
public GridColumnBase CurrentColumn { get; set; }
```

Property Value

A GridColumnBase descendant that represents the focused column.

Remarks

If the DataControlBase.NavigationStyle property is set to GridControlNavigationStyle.Row or GridControlNavigationStyle.None, the **CurrentColumn** property returns **null**.

GroupSummaryContentStyle Property

Gets or sets the style applied to group summary items. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupSummaryContentStyle As Style
```

C#

```
public Style GroupSummaryContentStyle { get; set; }
```

Property Value

A **System.Windows.Style** object that represents the style applied to group summary items.

GroupSummaryItemTemplate Property

Gets or sets the template that defines the presentation of summary items displayed within group rows. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupSummaryItemTemplate As DataTemplate
```

C#

```
public DataTemplate GroupSummaryItemTemplate { get; set; }
```

Property Value

A **System.Windows.DataTemplate** object that defines the presentation of summary items displayed within group rows.

See Also

GridControlBase Class
GridControlBase Members
DevExpress.UI.Xaml.Grid Namespace

GroupValueTemplate Property

Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupValueTemplate As DataTemplate
```

C#

```
public DataTemplate GroupValueTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of group values.

Remarks

Each column provides the GridColumnBase.GroupValueTemplate property that allows you to specify a custom template used to render its values displayed within group rows.

See Also

GroupValueTemplateSelector Property

Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupValueTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector GroupValueTemplateSelector { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

A template that defines the presentation of column values displayed within group rows is specified by the GroupValueTemplate property. If you have more than one template that can be used to render group values, you can implement custom logic to choose the required template. To do this, derive from the Windows.UI.Xaml.Controls.DataTemplateSelector class, implement the **SelectTemplateCore** method that returns a template which meets the required condition, and assign it to the **GroupValueTemplateSelector** property.

If both the GroupValueTemplate and **GroupValueTemplateSelector** are specified, a group value is rendered using the template returned by the template selector. If the template selector returns **null**, the template specified by the GroupValueTemplate property is used.

IsGroupPanelVisible Property

Gets whether the Group Panel is visible.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsGroupPanelVisible As Boolean
```

C#

```
public bool IsGroupPanelVisible { get; }
```

Property Value

true, if the group panel is visible; otherwise, **false**.

Remarks

The **IsGroupPanelVisible** property returns **true** if the ShowGroupPanel property is set to **true**. To learn more, see Group Panel.

ShowGroupedColumns Property

Gets or sets whether the grouped columns are displayed within a grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowGroupedColumns As Boolean
```

C#

```
public bool ShowGroupedColumns { get; set; }
```

Property Value

true to display the grouped columns within a grid; otherwise, **false**.

Remarks

When grouping is applied, group rows display the values of grouped columns. By default, grouping columns are not displayed within a grid. Their headers are displayed within the Group Panel. This avoids displaying superfluous information.

ShowGroupPanel Property

Gets or sets a value specifying whether the Group Panel is displayed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowGroupPanel As DefaultBoolean
```

C#

```
public DefaultBoolean ShowGroupPanel { get; set; }
```

Property Value

true to display the group panel; otherwise, **false**.

Remarks

To learn more, see Grouping.

VisibleColumns Property

Gets the list of visible columns. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property VisibleColumns As IList(of GridColumnBase)
```

C#

```
public IList<GridColumnBase> VisibleColumns { get; }
```

Property Value

The list of visible columns.

Remarks

The **VisibleColumns** list contains the columns whose ColumnBase.Visible property is set to **true**. To get all columns (visible and hidden) contained within the grid, use the GridControl.Columns property.

GridControlBase Events

Serves as the base class for data-aware controls (e.g., GridControl).

The following tables list the members exposed by the GridControlBase type.

Public Events

	Name	Description
	AutoGeneratedColumns	Occurs after the columns have been automatically generated. (Inherited from **DataControlBase**)
	AutoGeneratingColumn	Occurs each time an individual column is auto-generated. (Inherited from **DataControlBase**)
	BeforeLayoutRefresh	Enables you to lock down end-user capabilities that affect the onscreen position of the focused row (e.g. moving row focus, row scrolling, sorting, etc.). (Inherited from **DataControlBase**)
	CellValueChanged	Occurs after a cell's value has been changed.
	CellValueChanging	Fires in response to changing the edit value.
	ColumnsPopulated	Obsolete. Occurs after the columns have been automatically generated. (Inherited from **DataControlBase**)
	CurrentColumnChanged	Occurs after the focused column has been changed. (Inherited from **DataControlBase**)
	CustomGroupDisplayText	Enables you to provide custom content for group rows.
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	Drop	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	FilterChanged	Occurs after the grid's filter has been changed. (Inherited from **DataControlBase**)
	GotFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	HiddenEditor	Occurs after a cell's editor has been closed.
	Holding	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidRowException	Fires when a row fails validation or when it cannot be saved to a data source.
	IsEnabledChanged	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ItemsSourceChanged	Occurs after the DataControlBase.ItemsSource property has been changed. (Inherited from **DataControlBase**)
	KeyDown	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUp	(Inherited from **Windows.UI.Xaml.UIElement**)
	LayoutUpdated	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loading	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LostFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDelta	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCanceled	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLost	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerEntered	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExited	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMoved	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressed	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleased	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChanged	(Inherited from **Windows.UI.Xaml.UIElement**)
	PropertyChanged	Occurs every time any of the GridControlBase class properties have changed their value. (Inherited from **DataControlBase**)
	RightTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	SelectedItemChanged	Occurs after the selected item has been changed. (Inherited from **DataControlBase**)
	SelectionChanged	Occurs after grid's selection has been changed. (Inherited from **DataControlBase**)
	ShowFilterPopup	Enables you to customize a column's filter dropdown. (Inherited from **DataControlBase**)
	ShownEditor	Occurs after the focused cell's editor has been shown.
	SizeChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Tapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	Unloaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

CellValueChanged Event

Occurs after a cell's value has been changed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public CellValueChanged As CellValueChangedEventHandler
```

C#

```
public event CellValueChangedEventHandler CellValueChanged
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.CellValueChangedEventArgs containing data related to this event.

Remarks

A grid raises the **CellValueChanged** event after a cell's value has been changed.

The **CellValueChanged** event doesn't fire when a cell's value is changed using the methods provided by a data source.

See Also

GridControlBase Class
GridControlBase Members
DevExpress.UI.Xaml.Grid Namespace

© 2018 Developer Express Inc.

CellValueChanging Event

Fires in response to changing the edit value.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public CellValueChanging As CellValueChangedEventHandler
```

C#

```
public event CellValueChangedEventHandler CellValueChanging
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.CellValueChangedEventArgs containing data related to this event.

Remarks

The **CellValueChanging** event is raised each time the edited value is being changed (an end-user types or deletes a character, chooses a value from the dropdown list, etc.).

The **CellValueChanging** event doesn't fire when a cell's value is changed using the methods provided by a data source. Handle this event if you need to provide an immediate response to end-user actions. For instance, you may close the editor and focus the next cell when the edit value's length exceeds the predefined value.

CustomGroupDisplayText Event

Enables you to provide custom content for group rows.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public CustomGroupDisplayText As CustomGroupDisplayTextEventHandler
```

C#

```
public event CustomGroupDisplayTextEventHandler CustomGroupDisplayText
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.CustomGroupDisplayTextEventArgs containing data related to this event.

Remarks

You can group rows using custom rules by handling the GridControl.CustomColumnGroup event. In this instance, it may be useful to replace the default text displayed within group rows. To do this, handle the **CustomGroupDisplayText** event. The event arguments allow you to easily identify group rows and replace their display text.

Example

Show Me	
A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4881.	

This example shows how to group rows using custom rules. When grouping by the 'Unit Price' column, the rows in this column that have values between 0 and 10 should be combined into a single group. Rows whose values fall between 10 and 20 should be combined into another group, etc.

C#

HiddenEditor Event

Occurs after a cell's editor has been closed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public HiddenEditor As EditorEventHandler
```

C#

```
public event EditorEventHandler HiddenEditor
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.EditorEventArgs containing data related to this event.

Remarks

When an end-user activates a cell within a column with a custom template, the ShownEditor event is not raised. Since the **HiddenEditor** event is not raised either, the DataControlBase.ActiveEditor property value always stays **null**.

InvalidRowException Event

Fires when a row fails validation or when it cannot be saved to a data source.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public InvalidRowException As InvalidRowExceptionEventHandler
```

C#

```
public event InvalidRowExceptionEventHandler InvalidRowException
```

Event Data

The event handler receives an argument of type InvalidRowExceptionEventArgs containing data related to this event.

The following **InvalidRowExceptionEventArgs** properties provide information specific to this event.

Property	Description
ErrorText	Gets or sets the error description.
Exception	Gets the exception that raised the InvalidRowException event.
ExceptionMode	Gets or sets a value that specifies how an exception should be handled.
Row	Gets the processed row.
RowHandle	Gets the processed row's handle.
Source	Gets the grid that raised the event.
WindowCaption	Gets or sets the error window's caption.

Remarks

Row validation is performed within the GridControl.ValidateRow event handler, when a row is about to lose focus. The **InvalidRowException** event allows you to override the default error presentation. This event occurs after the GridControl.ValidateRow event (provided that the focused row's validation has failed).

Use the event parameter's InvalidRowExceptionEventArgs.ExceptionMode property to specify the action performed in response to entering an invalid value. You can display a message box with an error description, suppress any action, throw an exception or discard new data and revert to an old value.

ShownEditor Event

Occurs after the focused cell's editor has been shown.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
event Public ShownEditor As EditorEventHandler
```

C#

```
public event EditorEventHandler ShownEditor
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Grid.EditorEventArgs containing data related to this event.

Remarks

When an end-user activates a cell within a column with a custom template, the **ShownEditor** event is not raised. Since the HiddenEditor event is not raised either, the DataControlBase.ActiveEditor property value always stays **null**.

GridControlBase Methods

Serves as the base class for data-aware controls (e.g., GridControl).

The following tables list the members exposed by the GridControlBase type.

Public Methods

	Name	Description
	AddHandler	(Inherited from **DevExpress.Core.Native.DXControl**)
	ApplyTemplate	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	BeginDataUpdate	Prevents visual and internal data updates until the DataControlBase.EndDataUpdate method is called. (Inherited from **DataControlBase**)
	BeginInit	Starts the control's runtime initialization. (Inherited from **DataControlBase**)
	BeginSelection	Prevents selection updates until the DataControlBase.EndSelection method is called. (Inherited from **DataControlBase**)
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)
	CapturePointer	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClearColumnFilter	Overloaded. Removes the filter condition applied to the specified column. (Inherited from **DataControlBase**)
	ClearSorting	Clears the sorting applied to the grid. (Inherited from **DataControlBase**)
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CollapseAllGroups	Collapses all group rows. (Inherited from **DataControlBase**)
	CommitEditing	Hides the active editor and posts all the changes made within the focused row to a data source if the row values are valid. (Inherited from **DataControlBase**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	DeleteRow	Deletes the specified data row.

© 2018 Developer Express Inc.

	EndDataUpdate	Enables visual and internal data updates after the DataControlBase.BeginDataUpdate method call, and updates the grid. (Inherited from **DataControlBase**)
	EndInit	Ends the runtime initialization. (Inherited from **DataControlBase**)
	EndSelection	Enables selection updates after calling the DataControlBase.BeginSelection method, and forces an immediate update. (Inherited from **DataControlBase**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	Equals	(Inherited from **System.Object**)
	ExpandAllGroups	Expands all group rows. (Inherited from **DataControlBase**)
	FindName	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Focus	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetBindingExpression	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GetCellElementByRowHandleAndColumn	Returns the specified cell's UI element. (Inherited from **DataControlBase**)
	GetCellElementByTreeElement	Returns a cell that contains the specified tree element. (Inherited from **DataControlBase**)
	GetCellValue	Returns the value of the specified data cell. (Inherited from **DataControlBase**)
	GetColumnByTreeElement	Returns a column whose cell contains the specified tree element. (Inherited from **DataControlBase**)
	GetColumnFilterCriteria	Overloaded. Returns a filter applied to the specified column. (Inherited from **DataControlBase**)
	GetColumnFilterString	Overloaded. Returns a filter expression applied to the specified column. (Inherited from **DataControlBase**)
S	GetCurrentGrid	Gets the value of the DataControlBase.CurrentGrid attached property for a specified

© 2018 Developer Express Inc.

		Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	GetCurrentViewChangedListener	Gets the value of the DataControlBase.CurrentViewChanged Listener attached property for a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices. WindowsRuntime.RuntimeClass**)
S	GetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetRowElementByRowHandle	Returns a UI element that is the specified row. (Inherited from **DataControlBase**)
	GetRowState	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **DataControlBase**)
	GetSelectedCells	Returns the selected data cells. (Inherited from **DataControlBase**)
	GetTotalSummaryValue	Returns the value of the specified total summary item. (Inherited from **DataControlBase**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	HideEditor	Closes the active editor, discarding all the changes made. (Inherited from **DataControlBase**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	InvalidateArrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidateMeasure	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsCellSelected	Indicates whether the specified cell is selected. (Inherited from **DataControlBase**)
	IsGroupRow	Indicates whether the specified index corresponds to a group row. For internal use only.
	IsItemSelected	Indicates whether the specified item is selected. (Inherited from **DataControlBase**)

© 2018 Developer Express Inc.

	LockFocus	(Inherited from **DevExpress.Core.Native.DXControl**)
	Measure	(Inherited from **Windows.UI.Xaml.UIElement**)
	MergeColumnFilters	Overloaded. Combines the specified filter with the grid's current filter with the AND operator. (Inherited from **DataControlBase**)
	MoveColumnTo	Moves the specified column to the specified position. (Inherited from **DataControlBase**)
	MoveFirstRow	Moves focus to the first visible row within a grid. (Inherited from **DataControlBase**)
	MoveLastRow	Moves focus to the last visible row within a grid. (Inherited from **DataControlBase**)
	MoveNextPage	Moves focus forward to the bottom row displayed onscreen within a grid. (Inherited from **DataControlBase**)
	MoveNextRow	Moves focus to the row following the one currently focused. (Inherited from **DataControlBase**)
	MovePrevPage	Moves focus backward to the top row displayed onscreen within a grid. (Inherited from **DataControlBase**)
	MovePrevRow	(Inherited from **DataControlBase**)
	MoveSelectedItem	Selects the specified item. (Inherited from **DataControlBase**)
	PopulateColumns	Creates columns for all fields in a bound data source. (Inherited from **DataControlBase**)
	PostEditor	Saves the active editor's value to a data source without closing the editor. (Inherited from **DataControlBase**)
	RaiseEvent	(Inherited from **DevExpress.Core.Native.DXControl**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RefreshData	Updates the control data. (Inherited from **DataControlBase**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReleasePointerCapture	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ReleasePointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	RemoveHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	ScrollIntoView	Overloaded. Makes the specified row visible onscreen. (Inherited from **DataControlBase**)
	SelectAll	Selects all items within a grid. (Inherited from **DataControlBase**)
	SelectCell	Selects the cell. (Inherited from **DataControlBase**)
	SelectCells	Selects multiple cells. (Inherited from **DataControlBase**)
	SelectItem	Overloaded. Selects the specified item. (Inherited from **DataControlBase**)
	SelectRange	Selects multiple items, while preserving the current selection (if any). (Inherited from **DataControlBase**)
	SetBinding	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	SetCurrentGrid	Sets the value of the DataControlBase.CurrentGrid attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetCurrentViewChangedListener	Sets the value of the DataControlBase.CurrentViewChangedListener attached property to a specified Windows.UI.Xaml.DependencyObject. (Inherited from **DataControlBase**)
S	SetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ShowEditor	Activates the focused cell's inplace editor. (Inherited from **DataControlBase**)
	SortBy	Sorts data by the values of the specified column. (Inherited from **DataControlBase**)
	StartDragAsync	(Inherited from **Windows.UI.Xaml.UIElement**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

© 2018 Developer Express Inc.

	TransformToVisual	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TryStartDirectManipulation	(Inherited from **Windows.UI.Xaml.UIElement**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	UnselectAll	Unselects any selected items within a grid. (Inherited from **DataControlBase**)
	UnselectCell	Unselects the specified cell. (Inherited from **DataControlBase**)
	UnselectCells	Unselects the specified cells. (Inherited from **DataControlBase**)
	UnselectItem	Overloaded. Unselects the specified item. (Inherited from **DataControlBase**)
	UpdateLayout	(Inherited from **Windows.UI.Xaml.UIElement**)
	UpdateTotalSummary	Updates total summaries. (Inherited from **DataControlBase**)
	UpdateUnboundColumnValues	Updates unbound column values in the specified row. (Inherited from **DataControlBase**)

DeleteRow Method

Deletes the specified data row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic

```
Overridable Public Sub DeleteRow(
   ByVal rowHandle As Integer
)
```

C#

```
public virtual void DeleteRow(
   int rowHandle
)
```

Parameters
rowHandle
An integer value that specifies the handle of the row to delete.

IsGroupRow Method

Indicates whether the specified index corresponds to a group row. For internal use only.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function IsGroupRow(
   ByVal visibleIndex As Integer,
   ByVal level As Integer
) As Boolean
```

C#

```
public bool IsGroupRow(
   int visibleIndex,
   int level
)
```

Parameters

visibleIndex
An integer value that specifies a row's visible index.
level
An integer value that specifies a row's nesting level.

Return Value

true if the specified index corresponds to a group row; **false** if the specified index corresponds to a data row or invalid row.

GridControlCommands Constructor

Initializes a new instance of the GridControlCommands class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public New(
   ByVal grid As GridControl
)
```

C#

```
public GridControlCommands(
   GridControl grid
)
```

Parameters

grid
A GridControl object that represents the owner grid.

ChangeGroupExpanded Property

Toggles the specified group row's expanded state.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ChangeGroupExpanded As ICommand
```

C#

```
public ICommand ChangeGroupExpanded { get; }
```

Property Value

A command that implements the System.Windows.Input.ICommand interface.

Remarks

Corresponding Methods: GridControl.ExpandGroupRow and GridControl.CollapseGroupRow

ExpandAllGroups Property

Expands all group rows.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ExpandAllGroups As ICommand
```

C#

```
public ICommand ExpandAllGroups { get; }
```

Property Value

A command that implements the System.Windows.Input.ICommand interface.

Remarks

Corresponding method: DataControlBase.ExpandAllGroups

GridControlNavigationStyle Enumeration

Lists values that specify whether row focusing is allowed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Enum GridControlNavigationStyle
```
C#
```
public enum GridControlNavigationStyle
```

Members

Name	Description
Cell	The grid displays the focused row and focused cell. Data editing is allowed.
None	A grid doesn't display the focused row. Data editing is not allowed.
Row	A grid displays the focused row. Data editing is not allowed.

Remarks

The values listed by this enumeration are used to set the DataControlBase.NavigationStyle property's value.

See Also
DevExpress.UI.Xaml.Grid Namespace

GridDateColumn Class

Represents a column that represents Date-Time values.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridDateColumn Inherits GridMaskColumn
```

C#

```
public class GridDateColumn : GridMaskColumn
```

Remarks

There are five column types used to present specific data types (Boolean, Date-Time, Numeric, Lists and Text), one column type that provides masking capabilities for text values, and one column type for custom data presentation via templates. Cell values are edited using data editors. Each column type stores specific settings responsible for the data editor's functionality. A cell's editor is created when an end-user starts to edit the cell's value and is automatically destroyed when editing is completed. This dramatically increases the application's performance.

Use the MinValue and MaxValue properties to specify the allowed value range.

To learn more, see Data Editing.

GridDateColumn Members

Represents a column that represents Date-Time values.

The following tables list the members exposed by the GridDateColumn type.

Public Constructors

	Name	Description
	GridDateColumn	Initializes a new instance of the GridDateColumn class.

Public Properties

	Name	Description
	AcceptsReturn	Gets or sets whether an end-user can insert return characters. This is a dependency property. (Inherited from **GridTextColumn**)
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DisplayFormat	Gets or sets the pattern used to format cell values for display purposes. This is a dependency property. (Inherited from **GridTextColumn**)
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Mask	Gets or sets a mask expression. This is a dependency property. (Inherited from **GridMaskColumn**)

© 2018 Developer Express Inc.

	MaskCulture	Gets or sets the culture whose settings are used by masks. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskIgnoreBlank	Gets or sets whether a cell's editor can lose focus when a value hasn't been entered for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskPlaceHolder	Gets or sets the character used as the placeholder in a masked editor for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskSaveLiteral	Gets or sets whether constantly displayed mask characters (literals) are included in a cell's value for the **Simple** and **Regular** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskShowPlaceHolders	Gets or sets whether placeholders are displayed in a masked editor for the **RegEx** mask type. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskType	Gets or sets the mask type. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskUseAsDisplayFormat	Gets or sets whether to format a cell's value using the mask when it is not focused. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxValue	Gets or sets the maximum allowed value. This is a dependency property.
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
S	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	MinValue	Gets or sets the minimum allowed value. This is a dependency property.
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
S	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
S	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
S	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PopupSettings	Gets or sets an object that defines the appearance and behavior of the column editor's popup. This is a dependency property. (Inherited from **GridTextColumn**)
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it.

© 2018 Developer Express Inc.

		This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TextTrimming	Gets or sets the text trimming behavior. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TextWrapping	Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

GridDateColumn Constructor

Initializes a new instance of the GridDateColumn class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public GridDateColumn()
```

GridDateColumn Properties

Represents a column that represents Date-Time values.

The following tables list the members exposed by the GridDateColumn type.

Public Constructors

	Name	Description
	GridDateColumn	Initializes a new instance of the GridDateColumn class.

Public Properties

	Name	Description
	AcceptsReturn	Gets or sets whether an end-user can insert return characters. This is a dependency property. (Inherited from **GridTextColumn**)
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DisplayFormat	Gets or sets the pattern used to format cell values for display purposes. This is a dependency property. (Inherited from **GridTextColumn**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Mask	Gets or sets a mask expression. This is a dependency property. (Inherited from **GridMaskColumn**)

© 2018 Developer Express Inc.

	MaskCulture	Gets or sets the culture whose settings are used by masks. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskIgnoreBlank	Gets or sets whether a cell's editor can lose focus when a value hasn't been entered for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskPlaceHolder	Gets or sets the character used as the placeholder in a masked editor for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskSaveLiteral	Gets or sets whether constantly displayed mask characters (literals) are included in a cell's value for the **Simple** and **Regular** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskShowPlaceHolders	Gets or sets whether placeholders are displayed in a masked editor for the **RegEx** mask type. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskType	Gets or sets the mask type. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskUseAsDisplayFormat	Gets or sets whether to format a cell's value using the mask when it is not focused. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxValue	Gets or sets the maximum allowed value. This is a dependency property.
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
S	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	MinValue	Gets or sets the minimum allowed value. This is a dependency property.
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
S	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
S	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
S	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PopupSettings	Gets or sets an object that defines the appearance and behavior of the column editor's popup. This is a dependency property. (Inherited from **GridTextColumn**)
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it.

© 2018 Developer Express Inc.

		This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TextTrimming	Gets or sets the text trimming behavior. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TextWrapping	Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description
	AddHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)

MaxValue Property

Gets or sets the maximum allowed value. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MaxValue As DateTime
```

C#

```
public DateTime MaxValue { get; set; }
```

Property Value

A System.DateTime value that specifies the maximum allowed date.

Remarks

An end-user cannot select a value from the dropdown calendar if it is greater than the maximum value. The minimum allowed date is specified by the DateEdit.MinValue property.

MinValue Property

Gets or sets the minimum allowed value. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MinValue As DateTime
```

C#

```
public DateTime MinValue { get; set; }
```

Property Value

A System.DateTime value that specifies the minimum allowed date.

Remarks

An end-user cannot select a value from the dropdown calendar if it is less than the minimum value. The maximum allowed date is specified by the DateEdit.MaxValue property.

GridMaskColumn Class

Represents a column that provides masking capabilities for text values.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridMaskColumn Inherits GridTextColumn
```

C#

```
public class GridMaskColumn : GridTextColumn
```

Remarks

There are five column types used to present specific data types (Boolean, Date-Time, Numeric, Lists and Text), one column type that provides masking capabilities for text values, and one column type for custom data presentation via templates. Cell values are edited using data editors. Each column type stores specific settings responsible for the data editor's functionality. A cell's editor is created when an end-user starts to edit the cell's value and is automatically destroyed when editing is completed. This dramatically increases the application's performance.

The following masking options are available: Mask, MaskCulture, MaskIgnoreBlank, MaskPlaceHolder, MaskSaveLiteral, MaskShowPlaceHolders MaskType and MaskUseAsDisplayFormat.

To learn more, see Data Editing.

GridMaskColumn Members

Represents a column that provides masking capabilities for text values.

The following tables list the members exposed by the GridMaskColumn type.

Public Constructors

	Name	Description
	GridMaskColumn	Initializes a new instance of the GridMaskColumn class.

Public Properties

	Name	Description
	AcceptsReturn	Gets or sets whether an end-user can insert return characters. This is a dependency property. (Inherited from **GridTextColumn**)
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DisplayFormat	Gets or sets the pattern used to format cell values for display purposes. This is a dependency property. (Inherited from **GridTextColumn**)
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Mask	Gets or sets a mask expression. This is a dependency property.
	MaskCulture	Gets or sets the culture whose settings are used by masks. This is a

© 2018 Developer Express Inc.

		dependency property.
	MaskIgnoreBlank	Gets or sets whether a cell's editor can lose focus when a value hasn't been entered for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property.
	MaskPlaceHolder	Gets or sets the character used as the placeholder in a masked editor for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property.
	MaskSaveLiteral	Gets or sets whether constantly displayed mask characters (literals) are included in a cell's value for the **Simple** and **Regular** mask types. This is a dependency property.
	MaskShowPlaceHolders	Gets or sets whether placeholders are displayed in a masked editor for the **RegEx** mask type. This is a dependency property.
	MaskType	Gets or sets the mask type. This is a dependency property.
	MaskUseAsDisplayFormat	Gets or sets whether to format a cell's value using the mask when it is not focused. This is a dependency property.
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TextTrimming	Gets or sets the text trimming behavior. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TextWrapping	Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

GridMaskColumn Constructor

Initializes a new instance of the GridMaskColumn class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public GridMaskColumn()
```

GridMaskColumn Properties

Represents a column that provides masking capabilities for text values.

The following tables list the members exposed by the GridMaskColumn type.

Public Constructors

	Name	Description
	GridMaskColumn	Initializes a new instance of the GridMaskColumn class.

Public Properties

	Name	Description
	AcceptsReturn	Gets or sets whether an end-user can insert return characters. This is a dependency property. (Inherited from **GridTextColumn**)
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DisplayFormat	Gets or sets the pattern used to format cell values for display purposes. This is a dependency property. (Inherited from **GridTextColumn**)
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

Mask Property

Gets or sets a mask expression. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Mask As String
```

C#

```
public string Mask { get; set; }
```

Property Value

A string representing a mask expression.

Remarks

To learn more, see Masked Input Overview.

See Also

DevExpress.UI.Xaml.Grid Namespace
Masked Input Overview
Mask Types

© 2018 Developer Express Inc.

MaskCulture Property

Gets or sets the culture whose settings are used by masks. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MaskCulture As CultureInfo
```

C#

```
public CultureInfo MaskCulture { get; set; }
```

Property Value

A System.Globalization.CultureInfo object whose settings are used by masks.

Remarks

This property specifies the System.Globalization.CultureInfo whose settings are used by masks. For instance, it provides such settings as the character used as a currency symbol, date and time separators, the number of digits to the right of the decimal point, common date and numeric patterns, etc.

By default, the **MaskCulture** property is set to a null reference. In this instance, the masks use the culture of the current thread (the System.Globalization.CultureInfo.CurrentCulture property). You can set the **MaskCulture** property to any other System.Globalization.CultureInfo object, and the editor will use the specified culture instead of the default one.

MaskIgnoreBlank Property

Gets or sets whether a cell's editor can lose focus when a value hasn't been entered for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MaskIgnoreBlank As Boolean
```

C#

```
public bool MaskIgnoreBlank { get; set; }
```

Property Value

true, if a cell's editor can lose focus when a value has not been entered; otherwise, **false**.

Remarks

If the **MaskIgnoreBlank** property is set to **true**, an empty editor can lose focus. If the cell's value is only partially completed (there are still empty placeholders), focus cannot be moved from the cell's editor until an end-user enters the entire value or deletes the value by clearing the edit box.

If the **MaskIgnoreBlank** property is set to **false**, focus cannot be moved from the cell's editor until its value has been completely filled.

MaskPlaceHolder Property

Gets or sets the character used as the placeholder in a masked editor for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MaskPlaceHolder As Char
```

C#

```
public Char MaskPlaceHolder { get; set; }
```

Property Value

The character used as the placeholder in a masked editor.

MaskShowPlaceHolders

© 2018 Developer Express Inc.

MaskSaveLiteral Property

Gets or sets whether constantly displayed mask characters (literals) are included in a cell's value for the **Simple** and **Regular** mask types. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MaskSaveLiteral As Boolean
```

C#

```
public bool MaskSaveLiteral { get; set; }
```

Property Value

true, if the constantly displayed mask characters are included in a cell's value; otherwise, **false**.

Remarks

For the **Regular** and **Simple** mask types, a mask expression consists of control symbols (which define the type of character that should appear at a corresponding position or otherwise control user input) and literals. If the **MaskSaveLiteral** property is **true**, the edit value will store literal characters along with characters representing placeholders and data an end-user enters. If the property is **false**, only placeholders and user input characters are stored in the edit value.

For the **RegEx** mask type, the constantly displayed characters are always included in the cell's value.

MaskShowPlaceHolders Property

Gets or sets whether placeholders are displayed in a masked editor for the **RegEx** mask type. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MaskShowPlaceHolders As Boolean
```

C#

```
public bool MaskShowPlaceHolders { get; set; }
```

Property Value

true, to display placeholders in a masked editor; otherwise **false**.

Remarks

This property is in effect for the **RegEx** mask type. For the **Regular** and **Simple** mask types, placeholders are always visible. For the **Numeric** and **DateTime** mask types, placeholders are not supported.

The placeholder can be specified via the MaskPlaceHolder property.

MaskType Property

Gets or sets the mask type. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MaskType As MaskType
```

C#

```
public MaskType MaskType { get; set; }
```

Property Value

One of the MaskType enumeration values.

Remarks

To learn more, see Mask Types.

MaskUseAsDisplayFormat Property

Gets or sets whether to format a cell's value using the mask when it is not focused. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MaskUseAsDisplayFormat As Boolean
```

C#

```
public bool MaskUseAsDisplayFormat { get; set; }
```

Property Value

true if the mask settings are used to format a cell's value when it is not focused; **false** to use settings specified by the GridTextColumn.DisplayFormat property.

GridSpinEditColumn Class

Represents a column with numeric values.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridSpinEditColumn Inherits GridMaskColumn
```

C#

```
public class GridSpinEditColumn : GridMaskColumn
```

Remarks

There are five column types used to present specific data types (Boolean, Date-Time, Numeric, Lists and Text), one column type that provides masking capabilities for text values, and one column type for custom data presentation via templates. Cell values are edited using data editors. Each column type stores specific settings responsible for the data editor's functionality. A cell's editor is created when an end-user starts to edit the cell's value and is automatically destroyed when editing is completed. This dramatically increases the application's performance.

Use the MinValue and MaxValue properties to specify the range of numeric values available.

To learn more, see Data Editing.

GridSpinEditColumn Members

Represents a column with numeric values.

The following tables list the members exposed by the GridSpinEditColumn type.

Public Constructors

	Name	Description
	GridSpinEditColumn	Initializes a new instance of the GridSpinEditColumn class.

Public Properties

	Name	Description
	AcceptsReturn	Gets or sets whether an end-user can insert return characters. This is a dependency property. (Inherited from **GridTextColumn**)
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DisplayFormat	Gets or sets the pattern used to format cell values for display purposes. This is a dependency property. (Inherited from **GridTextColumn**)
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	Increment	Gets or sets a value by which a cell's value changes each time the cell's editor is spun. This is a dependency property.
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid.

© 2018 Developer Express Inc.

		This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	Mask	Gets or sets a mask expression. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskCulture	Gets or sets the culture whose settings are used by masks. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskIgnoreBlank	Gets or sets whether a cell's editor can lose focus when a value hasn't been entered for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskPlaceHolder	Gets or sets the character used as the placeholder in a masked editor for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskSaveLiteral	Gets or sets whether constantly displayed mask characters (literals) are included in a cell's value for the **Simple** and **Regular** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskShowPlaceHolders	Gets or sets whether placeholders are displayed in a masked editor for the **RegEx** mask type. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskType	Gets or sets the mask type. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskUseAsDisplayFormat	Gets or sets whether to format a cell's value using the mask when it is not focused. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxValue	Gets or sets the maximum allowed value. This is a dependency property.
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
S	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinValue	Gets or sets the minimum allowed value. This is a dependency property.
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PopupSettings	Gets or sets an object that defines the appearance and behavior of the column editor's popup. This is a dependency property. (Inherited from **GridTextColumn**)

© 2018 Developer Express Inc.

	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TextTrimming	Gets or sets the text trimming behavior. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TextWrapping	Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElem**

© 2018 Developer Express Inc.

		ent)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

		ColumnBase)
S	FieldTypeProperty	Identifies the FieldType dependency property. (Inherited from **ColumnBase**)
S	FilterPopupModeProperty	Identifies the FilterPopupMode dependency property. (Inherited from **ColumnBase**)
S	FixedWidthProperty	Identifies the FixedWidth dependency property. (Inherited from **ColumnBase**)
S	GroupColumnSummaryContentStyleProperty	Identifies the GroupColumnSummaryContentStyle dependency property. (Inherited from **GridColumnBase**)
S	GroupColumnSummaryItemTemplateProperty	Identifies the GroupColumnSummaryItemTemplate dependency property. (Inherited from **GridColumnBase**)
S	GroupIndexProperty	Identifies the GroupIndex dependency property. (Inherited from **GridColumnBase**)
S	GroupIntervalProperty	Identifies the GroupInterval dependency property. (Inherited from **GridColumnBase**)
S	GroupValueTemplateProperty	Identifies the GroupValueTemplate dependency property. (Inherited from **GridColumnBase**)
S	GroupValueTemplateSelectorProperty	Identifies the GroupValueTemplateSelector dependency property. (Inherited from **GridColumnBase**)
S	HasLeftSiblingProperty	Identifies the HasLeftSibling dependency property. (Inherited from **ColumnBase**)
S	HasRightSiblingProperty	Identifies the HasRightSibling dependency property. (Inherited from **ColumnBase**)
S	HasTotalSummariesProperty	Identifies the HasTotalSummaries dependency property. (Inherited from **ColumnBase**)
S	HeaderCaptionProperty	Identifies the HeaderCaption dependency property. (Inherited from **ColumnBase**)
S	HeaderProperty	Identifies the Header dependency property. (Inherited from **ColumnBase**)
S	HeaderStyleProperty	Identifies the HeaderStyle dependency property. (Inherited from **ColumnBase**)
S	HeaderTemplateProperty	Identifies the HeaderTemplate dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

S	HeaderTemplateSelectorProperty	Identifies the HeaderTemplateSelector dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipProperty	Identifies the HeaderToolTip dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipTemplateProperty	Identifies the HeaderToolTipTemplate dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipVisibilityPropertyKey	(Inherited from **ColumnBase**)
S	HorizontalContentAlignmentProperty	Identifies the HorizontalContentAlignment dependency property. (Inherited from **ColumnBase**)
S	HorizontalHeaderContentAlignmentProperty	Identifies the HorizontalHeaderContentAlignment dependency property. (Inherited from **ColumnBase**)
S	ImmediateUpdateAutoFilterProperty	Identifies the ImmediateUpdateAutoFilter dependency property. (Inherited from **ColumnBase**)
S	ImmediateUpdateColumnFilterProperty	Identifies the ImmediateUpdateColumnFilter dependency property. (Inherited from **ColumnBase**)
S	IncrementProperty	Identifies the Increment dependency property.
S	IsFirstProperty	Identifies the IsFirst dependency property. (Inherited from **ColumnBase**)
S	IsGroupedProperty	Identifies the IsGrouped dependency property. (Inherited from **GridColumnBase**)
S	IsLastProperty	Identifies the IsLast dependency property. (Inherited from **ColumnBase**)
S	IsSortedBySummaryProperty	Identifies the IsSortedBySummary dependency property. (Inherited from **ColumnBase**)
S	IsSortedProperty	Identifies the IsSorted dependency property. (Inherited from **ColumnBase**)
S	MaskCultureProperty	Identifies the MaskCulture dependency property. (Inherited from **GridMaskColumn**)
S	MaskIgnoreBlankProperty	Identifies the MaskIgnoreBlank dependency property. (Inherited from **GridMaskColumn**)
S	MaskPlaceHolderProperty	Identifies the MaskPlaceHolder dependency property. (Inherited from **GridMaskColumn**)

© 2018 Developer Express Inc.

S	MaskProperty	Identifies the Mask dependency property. (Inherited from **GridMaskColumn**)
S	MaskSaveLiteralProperty	Identifies the MaskSaveLiteral dependency property. (Inherited from **GridMaskColumn**)
S	MaskShowPlaceHoldersProperty	Identifies the MaskShowPlaceHolders dependency property. (Inherited from **GridMaskColumn**)
S	MaskTypeProperty	Identifies the MaskType dependency property. (Inherited from **GridMaskColumn**)
S	MaskUseAsDisplayFormatProperty	Identifies the MaskUseAsDisplayFormat dependency property. (Inherited from **GridMaskColumn**)
S	MaxValueProperty	Identifies the MaxValue dependency property.
S	MaxWidthProperty	Identifies the MaxWidth dependency property. (Inherited from **ColumnBase**)
S	MinValueProperty	Identifies the MinValue dependency property.
S	MinWidthProperty	Identifies the MinWidth dependency property. (Inherited from **ColumnBase**)
S	PopupSettingsProperty	Identifies the PopupSettings dependency property. (Inherited from **GridTextColumn**)
S	RoundDateTimeForColumnFilterProperty	(Inherited from **ColumnBase**)
S	ShowCriteriaInAutoFilterRowProperty	Identifies the ShowCriteriaInAutoFilterRow dependency property. (Inherited from **ColumnBase**)
S	ShowEmptyDateFilterProperty	Identifies the ShowEmptyDateFilter dependency property. (Inherited from **ColumnBase**)
S	ShowInColumnChooserProperty	Identifies the ShowInColumnChooser dependency property. (Inherited from **ColumnBase**)
S	ShowValidationAttributeErrorsProperty	Identifies the ShowValidationAttributeErrors dependency property. (Inherited from **ColumnBase**)
S	SortIndexProperty	Identifies the SortIndex dependency property. (Inherited from **ColumnBase**)
S	SortModeProperty	Identifies the SortMode dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

S	SortOrderProperty	Identifies the SortOrder dependency property. (Inherited from **ColumnBase**)
S	TabStopProperty	Identifies the TabStop dependency property. (Inherited from **ColumnBase**)
S	TextTrimmingProperty	Identifies the TextTrimming dependency property. (Inherited from **GridTextColumnBase**)
S	TextWrappingProperty	Identifies the TextWrapping dependency property. (Inherited from **GridTextColumnBase**)
S	TotalSummaryContentStyleProperty	Identifies the TotalSummaryContentStyle dependency property. (Inherited from **ColumnBase**)
S	TotalSummaryTextProperty	Identifies the TotalSummaryText dependency property. (Inherited from **ColumnBase**)
S	UnboundExpressionProperty	Identifies the UnboundExpression dependency property. (Inherited from **ColumnBase**)
S	UnboundTypeProperty	Identifies the UnboundType dependency property. (Inherited from **ColumnBase**)
S	VerticalContentAlignmentProperty	Identifies the VerticalContentAlignment dependency property. (Inherited from **ColumnBase**)
S	VisibleIndexProperty	Identifies the VisibleIndex dependency property. (Inherited from **ColumnBase**)
S	VisibleProperty	Identifies the Visible dependency property. (Inherited from **ColumnBase**)
S	WidthProperty	Identifies the Width dependency property. (Inherited from **ColumnBase**)

GridSpinEditColumn Constructor

Initializes a new instance of the GridSpinEditColumn class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public GridSpinEditColumn()
```

GridSpinEditColumn Properties

Represents a column with numeric values.

The following tables list the members exposed by the GridSpinEditColumn type.

Public Constructors

	Name	Description
	GridSpinEditColumn	Initializes a new instance of the GridSpinEditColumn class.

Public Properties

	Name	Description
	AcceptsReturn	Gets or sets whether an end-user can insert return characters. This is a dependency property. (Inherited from **GridTextColumn**)
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DisplayFormat	Gets or sets the pattern used to format cell values for display purposes. This is a dependency property. (Inherited from **GridTextColumn**)
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	Increment	Gets or sets a value by which a cell's value changes each time the cell's editor is spun. This is a dependency property.
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid.

© 2018 Developer Express Inc.

		This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	Mask	Gets or sets a mask expression. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskCulture	Gets or sets the culture whose settings are used by masks. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskIgnoreBlank	Gets or sets whether a cell's editor can lose focus when a value hasn't been entered for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskPlaceHolder	Gets or sets the character used as the placeholder in a masked editor for the **Simple**, **Regular** and **RegEx** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskSaveLiteral	Gets or sets whether constantly displayed mask characters (literals) are included in a cell's value for the **Simple** and **Regular** mask types. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskShowPlaceHolders	Gets or sets whether placeholders are displayed in a masked editor for the **RegEx** mask type. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskType	Gets or sets the mask type. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaskUseAsDisplayFormat	Gets or sets whether to format a cell's value using the mask when it is not focused. This is a dependency property. (Inherited from **GridMaskColumn**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxValue	Gets or sets the maximum allowed value. This is a dependency property.
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
S	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinValue	Gets or sets the minimum allowed value. This is a dependency property.
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PopupSettings	Gets or sets an object that defines the appearance and behavior of the column editor's popup. This is a dependency property. (Inherited from **GridTextColumn**)

© 2018 Developer Express Inc.

	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TextTrimming	Gets or sets the text trimming behavior. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TextWrapping	Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElem**

© 2018 Developer Express Inc.

		ent)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Increment Property

Gets or sets a value by which a cell's value changes each time the cell's editor is spun. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Increment As Double
```

C#

```
public Double Increment { get; set; }
```

Property Value

A System.Double value representing the increment for the spin editor.

Remarks

An end-user can increment or decrement the cell's value by pressing the UP or DOWN ARROW keys or clicking the cell's spin buttons.

MaxValue Property

Gets or sets the maximum allowed value. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MaxValue As Double
```

C#

```
public Double MaxValue { get; set; }
```

Property Value

A System.Double value that specifies the maximum allowed value.

Remarks

The minimum allowed value is specified by the MinValue property.

MinValue

© 2018 Developer Express Inc.

MinValue Property

Gets or sets the minimum allowed value. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property MinValue As Double
```

C#

```
public Double MinValue { get; set; }
```

Property Value

A System.Double value that specifies the minimum allowed value.

Remarks

The maximum allowed value is specified by the MaxValue property.

GridSummaryItemAlignment Enumeration

Lists values that specify a summary item's horizontal alignment within the Fixed Summary Panel.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Enum GridSummaryItemAlignment
```
C#
```
public enum GridSummaryItemAlignment
```

Members

Name	Description
Default	A summary is displayed within a group row.
Left	A summary item is aligned to the left of the Fixed Summary Panel.
Right	A summary item is aligned to the right of the Fixed Summary Panel.

Remarks

The values listed by this enumeration are used to set the SummaryItemBase.Alignment property's value.

GridTemplateColumn Class

Represents a column allowing you to implement custom data presentation.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridTemplateColumn Inherits GridColumnBase, IDetailElement(of ColumnBase)
```

C#

```
public class GridTemplateColumn : GridColumnBase, IDetailElement<ColumnBase>
```

Remarks

There are five column types used to present specific data types (Boolean, Date-Time, Numeric, Lists and Text), one column type that provides masking capabilities for text values, and one column type for custom data presentation via templates. Cell values are edited using data editors. Each column type stores specific settings responsible for the data editor's functionality. A cell's editor is created when an end-user starts to edit the cell's value and is automatically destroyed when editing is completed. This dramatically increases the application's performance.

Use the CellTemplate property to specify a template that defines the presentation of column cells.

Xaml

```
<Grid:GridTemplateColumn FieldName="HoursActive">
   <Grid:GridTemplateColumn.CellTemplate>
      <DataTemplate>
         <Slider Minimum="-100" Maximum="1000" SmallChange="10" LargeChange="50" Value="{Binding Path=Hou
      </DataTemplate>
   </Grid:GridTemplateColumn.CellTemplate>
</Grid:GridTemplateColumn>
```

When an end-user activates a cell within a column with a custom template, the GridControlBase.ShownEditor event is not raised. Since the GridControlBase.HiddenEditor event is not raised either, the DataControlBase.ActiveEditor property value always stays **null**.

To learn more, see Data Editing.

GridTemplateColumn Members

Represents a column allowing you to implement custom data presentation.

The following tables list the members exposed by the GridTemplateColumn type.

Public Constructors

	Name	Description
	GridTemplateColumn	Initializes a new instance of the GridTemplateColumn class.

Public Properties

	Name	Description
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellTemplateSelector	Gets the actual template selector that chooses a cell template based on custom logic. This is a dependency property.
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	CellTemplate	Gets or sets the template that defines the presentation of column cells. This is a dependency property.
	CellTemplateSelector	Gets or sets an object that chooses a cell template based on custom logic. This is a dependency property.
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)

© 2018 Developer Express Inc.

	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElem**

		ent)
	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that

© 2018 Developer Express Inc.

		fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

GridTemplateColumn Constructor

Initializes a new instance of the GridTemplateColumn class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public GridTemplateColumn()
```

GridTemplateColumn Properties

Represents a column allowing you to implement custom data presentation.

The following tables list the members exposed by the GridTemplateColumn type.

Public Constructors

	Name	Description
	GridTemplateColumn	Initializes a new instance of the GridTemplateColumn class.

Public Properties

	Name	Description
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellTemplateSelector	Gets the actual template selector that chooses a cell template based on custom logic. This is a dependency property.
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	CellTemplate	Gets or sets the template that defines the presentation of column cells. This is a dependency property.
	CellTemplateSelector	Gets or sets an object that chooses a cell template based on custom logic. This is a dependency property.
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)

	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)

© 2018 Developer Express Inc.

	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

ActualCellTemplateSelector Property

Gets the actual template selector that chooses a cell template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualCellTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ActualCellTemplateSelector { get; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

CellTemplate Property

Gets or sets the template that defines the presentation of column cells. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property CellTemplate As DataTemplate
```

C#

```
public DataTemplate CellTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of column cells.

Remarks

Use the **CellTemplate** property to define a template that specifies the visualization of column cells.

CellTemplateSelector Property

Gets or sets an object that chooses a cell template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property CellTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector CellTemplateSelector { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

A template that defines the presentation of data cells is specified by the CellTemplate property. If you have more than one template that can be used to render cells, you can implement custom logic to choose the required template. To do this, derive from the Windows.UI.Xaml.Controls.DataTemplateSelector class, implement the **SelectTemplateCore** method that returns a template which meets the required condition, and assign it to the **CellTemplateSelector** property.

If both the CellTemplate and **CellTemplateSelector** are specified, a cell is rendered using the template returned by the template selector. If the template selector returns **null**, the template specified by the CellTemplate property is used.

GridTextColumn Class

Represents a column with text values.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridTextColumn Inherits GridTextColumnBase, IDetailElement(of ColumnBase)
```

C#

```
public class GridTextColumn : GridTextColumnBase, IDetailElement<ColumnBase>
```

Remarks

There are five column types used to present specific data types (Boolean, Date-Time, Numeric, Lists and Text), one column type that provides masking capabilities for text values, and one column type for custom data presentation via templates. Cell values are edited using data editors. Each column type stores specific settings responsible for the data editor's functionality. A cell's editor is created when an end-user starts to edit the cell's value and is automatically destroyed when editing is completed. This dramatically increases the application's performance.

Xaml

```
<Grid:GridTextColumn FieldName="OID" Header="Id" AllowEditing="False"/>
<Grid:GridTextColumn FieldName="From"/>
```

Use the ColumnBase.AllowEditing property to specify whether column values can be edited by end-users.

To learn more, see Data Editing.

GridTextColumn Members

Represents a column with text values.

The following tables list the members exposed by the GridTextColumn type.

Public Constructors

	Name	Description
	GridTextColumn	Initializes a new instance of the GridTextColumn class.

Public Properties

	Name	Description
	AcceptsReturn	Gets or sets whether an end-user can insert return characters. This is a dependency property.
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DisplayFormat	Gets or sets the pattern used to format cell values for display purposes. This is a dependency property.
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PopupSettings	Gets or sets an object that defines the appearance and behavior of the column editor's popup. This is a dependency property.
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TextTrimming	Gets or sets the text trimming behavior. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TextWrapping	Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

		dependency property. (Inherited from **ColumnBase**)
S	DisplayFormatProperty	Identifies the DisplayFormat dependency property.
S	FieldNameProperty	Identifies the FieldName dependency property. (Inherited from **ColumnBase**)
S	FieldTypeProperty	Identifies the FieldType dependency property. (Inherited from **ColumnBase**)
S	FilterPopupModeProperty	Identifies the FilterPopupMode dependency property. (Inherited from **ColumnBase**)
S	FixedWidthProperty	Identifies the FixedWidth dependency property. (Inherited from **ColumnBase**)
S	GroupColumnSummaryContentStyleProperty	Identifies the GroupColumnSummaryContentStyle dependency property. (Inherited from **GridColumnBase**)
S	GroupColumnSummaryItemTemplateProperty	Identifies the GroupColumnSummaryItemTemplate dependency property. (Inherited from **GridColumnBase**)
S	GroupIndexProperty	Identifies the GroupIndex dependency property. (Inherited from **GridColumnBase**)
S	GroupIntervalProperty	Identifies the GroupInterval dependency property. (Inherited from **GridColumnBase**)
S	GroupValueTemplateProperty	Identifies the GroupValueTemplate dependency property. (Inherited from **GridColumnBase**)
S	GroupValueTemplateSelectorProperty	Identifies the GroupValueTemplateSelector dependency property. (Inherited from **GridColumnBase**)
S	HasLeftSiblingProperty	Identifies the HasLeftSibling dependency property. (Inherited from **ColumnBase**)
S	HasRightSiblingProperty	Identifies the HasRightSibling dependency property. (Inherited from **ColumnBase**)
S	HasTotalSummariesProperty	Identifies the HasTotalSummaries dependency property. (Inherited from **ColumnBase**)
S	HeaderCaptionProperty	Identifies the HeaderCaption dependency property. (Inherited from **ColumnBase**)
S	HeaderProperty	Identifies the Header dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

S	HeaderStyleProperty	Identifies the HeaderStyle dependency property. (Inherited from **ColumnBase**)
S	HeaderTemplateProperty	Identifies the HeaderTemplate dependency property. (Inherited from **ColumnBase**)
S	HeaderTemplateSelectorProperty	Identifies the HeaderTemplateSelector dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipProperty	Identifies the HeaderToolTip dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipTemplateProperty	Identifies the HeaderToolTipTemplate dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipVisibilityPropertyKey	(Inherited from **ColumnBase**)
S	HorizontalContentAlignmentProperty	Identifies the HorizontalContentAlignment dependency property. (Inherited from **ColumnBase**)
S	HorizontalHeaderContentAlignmentProperty	Identifies the HorizontalHeaderContentAlignment dependency property. (Inherited from **ColumnBase**)
S	ImmediateUpdateAutoFilterProperty	Identifies the ImmediateUpdateAutoFilter dependency property. (Inherited from **ColumnBase**)
S	ImmediateUpdateColumnFilterProperty	Identifies the ImmediateUpdateColumnFilter dependency property. (Inherited from **ColumnBase**)
S	IsFirstProperty	Identifies the IsFirst dependency property. (Inherited from **ColumnBase**)
S	IsGroupedProperty	Identifies the IsGrouped dependency property. (Inherited from **GridColumnBase**)
S	IsLastProperty	Identifies the IsLast dependency property. (Inherited from **ColumnBase**)
S	IsSortedBySummaryProperty	Identifies the IsSortedBySummary dependency property. (Inherited from **ColumnBase**)
S	IsSortedProperty	Identifies the IsSorted dependency property. (Inherited from **ColumnBase**)
S	MaxWidthProperty	Identifies the MaxWidth dependency property. (Inherited from **ColumnBase**)
S	MinWidthProperty	Identifies the MinWidth dependency property. (Inherited from

		ColumnBase)
S	PopupSettingsProperty	Identifies the PopupSettings dependency property.
S	RoundDateTimeForColumnFilterProperty	(Inherited from **ColumnBase**)
S	ShowCriteriaInAutoFilterRowProperty	Identifies the ShowCriteriaInAutoFilterRow dependency property. (Inherited from **ColumnBase**)
S	ShowEmptyDateFilterProperty	Identifies the ShowEmptyDateFilter dependency property. (Inherited from **ColumnBase**)
S	ShowInColumnChooserProperty	Identifies the ShowInColumnChooser dependency property. (Inherited from **ColumnBase**)
S	ShowValidationAttributeErrorsProperty	Identifies the ShowValidationAttributeErrors dependency property. (Inherited from **ColumnBase**)
S	SortIndexProperty	Identifies the SortIndex dependency property. (Inherited from **ColumnBase**)
S	SortModeProperty	Identifies the SortMode dependency property. (Inherited from **ColumnBase**)
S	SortOrderProperty	Identifies the SortOrder dependency property. (Inherited from **ColumnBase**)
S	TabStopProperty	Identifies the TabStop dependency property. (Inherited from **ColumnBase**)
S	TextTrimmingProperty	Identifies the TextTrimming dependency property. (Inherited from **GridTextColumnBase**)
S	TextWrappingProperty	Identifies the TextWrapping dependency property. (Inherited from **GridTextColumnBase**)
S	TotalSummaryContentStyleProperty	Identifies the TotalSummaryContentStyle dependency property. (Inherited from **ColumnBase**)
S	TotalSummaryTextProperty	Identifies the TotalSummaryText dependency property. (Inherited from **ColumnBase**)
S	UnboundExpressionProperty	Identifies the UnboundExpression dependency property. (Inherited from **ColumnBase**)
S	UnboundTypeProperty	Identifies the UnboundType dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	VerticalContentAlignmentProperty	Identifies the VerticalContentAlignment dependency property. (Inherited from **ColumnBase**)
	VisibleIndexProperty	Identifies the VisibleIndex dependency property. (Inherited from **ColumnBase**)
	VisibleProperty	Identifies the Visible dependency property. (Inherited from **ColumnBase**)
	WidthProperty	Identifies the Width dependency property. (Inherited from **ColumnBase**)

GridTextColumn Constructor

Initializes a new instance of the GridTextColumn class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public GridTextColumn()
```

GridTextColumn Properties

Represents a column with text values.

The following tables list the members exposed by the GridTextColumn type.

Public Constructors

	Name	Description
	GridTextColumn	Initializes a new instance of the GridTextColumn class.

Public Properties

	Name	Description
	AcceptsReturn	Gets or sets whether an end-user can insert return characters. This is a dependency property.
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DisplayFormat	Gets or sets the pattern used to format cell values for display purposes. This is a dependency property.
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)
	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency

© 2018 Developer Express Inc.

		property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)
	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PopupSettings	Gets or sets an object that defines the appearance and behavior of the column editor's popup. This is a dependency property.
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TextTrimming	Gets or sets the text trimming behavior. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TextWrapping	Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property. (Inherited from **GridTextColumnBase**)
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

		dependency property. (Inherited from **ColumnBase**)
S	DisplayFormatProperty	Identifies the DisplayFormat dependency property.
S	FieldNameProperty	Identifies the FieldName dependency property. (Inherited from **ColumnBase**)
S	FieldTypeProperty	Identifies the FieldType dependency property. (Inherited from **ColumnBase**)
S	FilterPopupModeProperty	Identifies the FilterPopupMode dependency property. (Inherited from **ColumnBase**)
S	FixedWidthProperty	Identifies the FixedWidth dependency property. (Inherited from **ColumnBase**)
S	GroupColumnSummaryContentStyleProperty	Identifies the GroupColumnSummaryContentStyle dependency property. (Inherited from **GridColumnBase**)
S	GroupColumnSummaryItemTemplateProperty	Identifies the GroupColumnSummaryItemTemplate dependency property. (Inherited from **GridColumnBase**)
S	GroupIndexProperty	Identifies the GroupIndex dependency property. (Inherited from **GridColumnBase**)
S	GroupIntervalProperty	Identifies the GroupInterval dependency property. (Inherited from **GridColumnBase**)
S	GroupValueTemplateProperty	Identifies the GroupValueTemplate dependency property. (Inherited from **GridColumnBase**)
S	GroupValueTemplateSelectorProperty	Identifies the GroupValueTemplateSelector dependency property. (Inherited from **GridColumnBase**)
S	HasLeftSiblingProperty	Identifies the HasLeftSibling dependency property. (Inherited from **ColumnBase**)
S	HasRightSiblingProperty	Identifies the HasRightSibling dependency property. (Inherited from **ColumnBase**)
S	HasTotalSummariesProperty	Identifies the HasTotalSummaries dependency property. (Inherited from **ColumnBase**)
S	HeaderCaptionProperty	Identifies the HeaderCaption dependency property. (Inherited from **ColumnBase**)
S	HeaderProperty	Identifies the Header dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

S	HeaderStyleProperty	Identifies the HeaderStyle dependency property. (Inherited from **ColumnBase**)
S	HeaderTemplateProperty	Identifies the HeaderTemplate dependency property. (Inherited from **ColumnBase**)
S	HeaderTemplateSelectorProperty	Identifies the HeaderTemplateSelector dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipProperty	Identifies the HeaderToolTip dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipTemplateProperty	Identifies the HeaderToolTipTemplate dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipVisibilityPropertyKey	(Inherited from **ColumnBase**)
S	HorizontalContentAlignmentProperty	Identifies the HorizontalContentAlignment dependency property. (Inherited from **ColumnBase**)
S	HorizontalHeaderContentAlignmentProperty	Identifies the HorizontalHeaderContentAlignment dependency property. (Inherited from **ColumnBase**)
S	ImmediateUpdateAutoFilterProperty	Identifies the ImmediateUpdateAutoFilter dependency property. (Inherited from **ColumnBase**)
S	ImmediateUpdateColumnFilterProperty	Identifies the ImmediateUpdateColumnFilter dependency property. (Inherited from **ColumnBase**)
S	IsFirstProperty	Identifies the IsFirst dependency property. (Inherited from **ColumnBase**)
S	IsGroupedProperty	Identifies the IsGrouped dependency property. (Inherited from **GridColumnBase**)
S	IsLastProperty	Identifies the IsLast dependency property. (Inherited from **ColumnBase**)
S	IsSortedBySummaryProperty	Identifies the IsSortedBySummary dependency property. (Inherited from **ColumnBase**)
S	IsSortedProperty	Identifies the IsSorted dependency property. (Inherited from **ColumnBase**)
S	MaxWidthProperty	Identifies the MaxWidth dependency property. (Inherited from **ColumnBase**)
S	MinWidthProperty	Identifies the MinWidth dependency property. (Inherited from

		ColumnBase)
S	PopupSettingsProperty	Identifies the PopupSettings dependency property.
S	RoundDateTimeForColumnFilterProperty	(Inherited from **ColumnBase**)
S	ShowCriteriaInAutoFilterRowProperty	Identifies the ShowCriteriaInAutoFilterRow dependency property. (Inherited from **ColumnBase**)
S	ShowEmptyDateFilterProperty	Identifies the ShowEmptyDateFilter dependency property. (Inherited from **ColumnBase**)
S	ShowInColumnChooserProperty	Identifies the ShowInColumnChooser dependency property. (Inherited from **ColumnBase**)
S	ShowValidationAttributeErrorsProperty	Identifies the ShowValidationAttributeErrors dependency property. (Inherited from **ColumnBase**)
S	SortIndexProperty	Identifies the SortIndex dependency property. (Inherited from **ColumnBase**)
S	SortModeProperty	Identifies the SortMode dependency property. (Inherited from **ColumnBase**)
S	SortOrderProperty	Identifies the SortOrder dependency property. (Inherited from **ColumnBase**)
S	TabStopProperty	Identifies the TabStop dependency property. (Inherited from **ColumnBase**)
S	TextTrimmingProperty	Identifies the TextTrimming dependency property. (Inherited from **GridTextColumnBase**)
S	TextWrappingProperty	Identifies the TextWrapping dependency property. (Inherited from **GridTextColumnBase**)
S	TotalSummaryContentStyleProperty	Identifies the TotalSummaryContentStyle dependency property. (Inherited from **ColumnBase**)
S	TotalSummaryTextProperty	Identifies the TotalSummaryText dependency property. (Inherited from **ColumnBase**)
S	UnboundExpressionProperty	Identifies the UnboundExpression dependency property. (Inherited from **ColumnBase**)
S	UnboundTypeProperty	Identifies the UnboundType dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	VerticalContentAlignmentProperty	Identifies the VerticalContentAlignment dependency property. (Inherited from **ColumnBase**)
	VisibleIndexProperty	Identifies the VisibleIndex dependency property. (Inherited from **ColumnBase**)
	VisibleProperty	Identifies the Visible dependency property. (Inherited from **ColumnBase**)
	WidthProperty	Identifies the Width dependency property. (Inherited from **ColumnBase**)

AcceptsReturn Property

Gets or sets whether an end-user can insert return characters. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property AcceptsReturn As Boolean
```

C#

```
public bool AcceptsReturn { get; set; }
```

Property Value

true, to allow return characters to be accepted and processed by a cell editor; otherwise, **false**.

DisplayFormat Property

Gets or sets the pattern used to format cell values for display purposes. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property DisplayFormat As String
```

C#

```
public string DisplayFormat { get; set; }
```

Property Value

A string value that specifies the format applied to column values.

Remarks

Use the **DisplayFormat** property to format the column values and add any text to their textual representation. The formatted text is displayed if a cell's value is not currently edited (e.g. a cell is not focused or it is read-only). For example, to display currency values, set the **DisplayFormat** property to '*c2*'. If a cell's value is **99.9**, its formatted equivalent will be **$99.90**.

PopupSettings Property

Gets or sets an object that defines the appearance and behavior of the column editor's popup. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property PopupSettings As PopupSettings
```

C#

```
public PopupSettings PopupSettings { get; set; }
```

Property Value

A DevExpress.UI.Xaml.Editors.PopupSettings object that defines the appearance and behavior of the column editor's popup.

Remarks

Use the **Content** property of the DevExpress.UI.Xaml.Editors.PopupSettings object to define popup content.

GridTextColumnBase Class

Serves as a base for classes that represent grid columns.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridTextColumnBase Inherits GridColumnBase
```

C#

```
public abstract class GridTextColumnBase : GridColumnBase
```

Remarks

There are five column types used to present specific data types (Boolean, Date-Time, Numeric, Lists and Text), one column type that provides masking capabilities for text values, and one column type for custom data presentation via templates. Cell values are edited using data editors. Each column type stores specific settings responsible for the data editor's functionality. A cell's editor is created when an end-user starts to edit the cell's value and is automatically destroyed when editing is completed. This dramatically increases the application's performance.

To learn more, see Data Editing.

GridTextColumnBase Members

Serves as a base for classes that represent grid columns.

The following tables list the members exposed by the GridTextColumnBase type.

Public Properties

	Name	Description
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

S	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TextTrimming	Gets or sets the text trimming behavior. This is a dependency property.
	TextWrapping	Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property.
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

S	AllowSortingProperty	Identifies the AllowSorting dependency property. (Inherited from **ColumnBase**)
S	AutoFilterConditionProperty	Identifies the AutoFilterCondition dependency property. (Inherited from **ColumnBase**)
S	AutoFilterCriteriaProperty	Identifies the AutoFilterCriteria dependency property. (Inherited from **ColumnBase**)
S	AutoFilterEditorStyleProperty	Identifies the AutoFilterEditorStyle dependency property. (Inherited from **ColumnBase**)
S	AutoFilterValueProperty	Identifies the AutoFilterValue dependency property. (Inherited from **ColumnBase**)
S	CellStyleProperty	Identifies the CellStyle dependency property. (Inherited from **ColumnBase**)
S	ColumnChooserHeaderCaptionProperty	Identifies the ColumnChooserHeaderCaption dependency property. (Inherited from **ColumnBase**)
S	ColumnPositionProperty	Identifies the ColumnPosition dependency property. (Inherited from **ColumnBase**)
S	CustomColumnFilterPopupTemplateProperty	Identifies the CustomColumnFilterPopupTemplate dependency property. (Inherited from **ColumnBase**)
S	FieldNameProperty	Identifies the FieldName dependency property. (Inherited from **ColumnBase**)
S	FieldTypeProperty	Identifies the FieldType dependency property. (Inherited from **ColumnBase**)
S	FilterPopupModeProperty	Identifies the FilterPopupMode dependency property. (Inherited from **ColumnBase**)
S	FixedWidthProperty	Identifies the FixedWidth dependency property. (Inherited from **ColumnBase**)
S	GroupColumnSummaryContentStyleProperty	Identifies the GroupColumnSummaryContentStyle dependency property. (Inherited from **GridColumnBase**)
S	GroupColumnSummaryItemTemplateProperty	Identifies the GroupColumnSummaryItemTemplate dependency property. (Inherited from **GridColumnBase**)
S	GroupIndexProperty	Identifies the GroupIndex dependency property. (Inherited from **GridColumnBase**)

© 2018 Developer Express Inc.

S	GroupIntervalProperty	Identifies the GroupInterval dependency property. (Inherited from **GridColumnBase**)
S	GroupValueTemplateProperty	Identifies the GroupValueTemplate dependency property. (Inherited from **GridColumnBase**)
S	GroupValueTemplateSelectorProperty	Identifies the GroupValueTemplateSelector dependency property. (Inherited from **GridColumnBase**)
S	HasLeftSiblingProperty	Identifies the HasLeftSibling dependency property. (Inherited from **ColumnBase**)
S	HasRightSiblingProperty	Identifies the HasRightSibling dependency property. (Inherited from **ColumnBase**)
S	HasTotalSummariesProperty	Identifies the HasTotalSummaries dependency property. (Inherited from **ColumnBase**)
S	HeaderCaptionProperty	Identifies the HeaderCaption dependency property. (Inherited from **ColumnBase**)
S	HeaderProperty	Identifies the Header dependency property. (Inherited from **ColumnBase**)
S	HeaderStyleProperty	Identifies the HeaderStyle dependency property. (Inherited from **ColumnBase**)
S	HeaderTemplateProperty	Identifies the HeaderTemplate dependency property. (Inherited from **ColumnBase**)
S	HeaderTemplateSelectorProperty	Identifies the HeaderTemplateSelector dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipProperty	Identifies the HeaderToolTip dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipTemplateProperty	Identifies the HeaderToolTipTemplate dependency property. (Inherited from **ColumnBase**)
S	HeaderToolTipVisibilityPropertyKey	(Inherited from **ColumnBase**)
S	HorizontalContentAlignmentProperty	Identifies the HorizontalContentAlignment dependency property. (Inherited from **ColumnBase**)
S	HorizontalHeaderContentAlignmentProperty	Identifies the HorizontalHeaderContentAlignment dependency property. (Inherited from **ColumnBase**)
S	ImmediateUpdateAutoFilterProperty	Identifies the ImmediateUpdateAutoFilter

GridTextColumnBase Properties

Serves as a base for classes that represent grid columns.

The following tables list the members exposed by the GridTextColumnBase type.

Public Properties

	Name	Description
	ActualAllowColumnFiltering	Gets whether an end-user can filter data using the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowGrouping	Gets whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualAllowMoving	Gets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowResizing	Gets whether an end-user can resize this column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualAllowSorting	Gets whether an end-user can sort data by column values. This is a dependency property. (Inherited from **ColumnBase**)
	ActualCellStyle	Gets the actual style applied to column cells. This is a dependency property. (Inherited from **ColumnBase**)
	ActualDataWidth	This member supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	ActualGroupValueTemplateSelector	Gets the actual template selector that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	ActualHeaderStyle	Gets or sets the actual style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderTemplateSelector	Gets the actual template selector that chooses a header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeaderToolTipTemplate	Gets or sets the actual template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ActualHeaderWidth	Gets the column header's actual width. This is a dependency property. (Inherited from **ColumnBase**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualShowCriteriaInAutoFilterRow	(Inherited from **ColumnBase**)
	ActualTotalSummaryContentStyle	Gets the actual style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	ActualWidth	Gets the column's actual width. This is a dependency property. (Inherited from **ColumnBase**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowAutoFilter	Gets or sets whether an end-user can filter data by the column's values using the automatic filter row. This is a dependency property. (Inherited from **ColumnBase**)
	AllowColumnFiltering	Gets or sets whether an end-user can filter data by a column. This is a dependency property. (Inherited from **ColumnBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowEditing	Gets or sets whether end-users can edit column values. This is a dependency property. (Inherited from **ColumnBase**)
	AllowFocus	Gets or sets whether the column cells can be focused. This is a dependency property. (Inherited from **ColumnBase**)
	AllowGrouping	Gets or sets a value that specifies whether an end-user can group data by the current column. This is a dependency property. (Inherited from **GridColumnBase**)
	AllowMoving	Gets or sets whether an end-user is allowed to move this column by dragging its header. This is a dependency property. (Inherited from **ColumnBase**)
	AllowResizing	Gets or sets whether an end-user can resize this column. This is a

© 2018 Developer Express Inc.

		dependency property. (Inherited from **ColumnBase**)
	AllowSearchPanel	Gets or sets whether the column data is taken into account when searching via the Search Panel. This is a dependency property. (Inherited from **ColumnBase**)
	AllowSorting	Gets or sets whether an end-user can sort data by the column's values. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCondition	Gets or sets the type of the comparison operator used to create filter conditions for the current column using the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterCriteria	Gets or sets the type of the filter criteria used to filter the grid data. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterEditorStyle	Gets or sets the style applied to the column's data cell displayed within the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	AutoFilterValue	Gets or sets the value in the Auto Filter Row for this column. (Inherited from **ColumnBase**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CellStyle	Gets or sets the style of cells displayed within this column. This is a dependency property. (Inherited from **ColumnBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ColumnChooserHeaderCaption	Gets or sets the caption of the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ColumnFilterMode	Gets or sets how column values are filtered. (Inherited from **ColumnBase**)
	ColumnPosition	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property. (Inherited from **ColumnBase**)
	Commands	Provides access to column commands. (Inherited from **ColumnBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CustomColumnFilterPopupTemplate	Gets or sets the template that defines the presentation of the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataControl	Gets the data-aware control which owns the column. (Inherited from **ColumnBase**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FieldName	Gets the name of the database field assigned to this column. This is a dependency property. (Inherited from **ColumnBase**)
	FieldType	Gets the type of data displayed by the column. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	FilterPopupMode	Gets or sets the display mode of the column's filter dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	FixedWidth	Gets or sets whether the column's width remains the same when the auto column width feature is enabled. This is a dependency property. (Inherited from **ColumnBase**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GroupColumnSummaryContentStyle	Gets or sets the style applied to group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupColumnSummaryItemTemplate	Gets or sets the template that defines the presentation of group summary items aligned by columns. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupIndex	Gets or sets the column's position among grouping columns. (Inherited from **GridColumnBase**)
	GroupInterval	Gets or sets how data items (rows) are grouped when grouping by this column is applied. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplate	Gets or sets the template that defines the presentation of column values displayed within group rows. This is a dependency property. (Inherited from **GridColumnBase**)
	GroupValueTemplateSelector	Gets or sets an object that chooses a group row value template based on custom logic. This is a dependency property. (Inherited from **GridColumnBase**)
	HasLeftSibling	Indicates whether the current column has a sibling column displayed to its left. This is a dependency property. (Inherited from **ColumnBase**)
	HasRightSibling	Indicates whether the current column has a sibling column displayed to its right. This is a dependency property. (Inherited from **ColumnBase**)
	HasTotalSummaries	Gets whether the column displays total summaries. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	Header	Gets or sets the column header's contents. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderCaption	Gets the column header's caption. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderStyle	Gets or sets the style applied to a column header. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplate	Gets or sets the template that defines the column header's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderTemplateSelector	Gets or sets an object that chooses a column header template based on custom logic. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTip	Gets or sets the column header tooltip. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipTemplate	Gets or sets the template that defines the tooltip's presentation. This is a dependency property. (Inherited from **ColumnBase**)
	HeaderToolTipVisibility	This property supports the internal infrastructure and is not intended to be used directly from your code. (Inherited from **ColumnBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	Gets or sets the horizontal alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	HorizontalHeaderContentAlignment	Gets or sets the column header's content alignment. This is a dependency property. (Inherited from **ColumnBase**)

© 2018 Developer Express Inc.

	ImmediateUpdateAutoFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user modifies the text within the auto filter row's cell. This is a dependency property. (Inherited from **ColumnBase**)
	ImmediateUpdateColumnFilter	Gets or sets whether the column's filter condition is updated as soon as an end-user selects an item within the column's Filter Dropdown. This is a dependency property. (Inherited from **ColumnBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsFirst	Gets whether the column is the first visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsGrouped	Gets whether the grid is grouped by the values of this column. This is a dependency property. (Inherited from **GridColumnBase**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLast	Gets whether the column is the last visible column displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSorted	Gets whether data is sorted by the values of this column. This is a dependency property. (Inherited from **ColumnBase**)
	IsSortedBySummary	Gets whether group rows that correspond to this grouping column are sorted by group summary values. This is a dependency property (Inherited from **ColumnBase**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	Gets or sets the column's maximum width. This is a dependency property. (Inherited from **ColumnBase**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElem**

© 2018 Developer Express Inc.

		ent)
	MinWidth	Gets or sets the column's minimum width. This is a dependency property. (Inherited from **ColumnBase**)
S	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	Gets or sets the column's name. (Inherited from **ColumnBase**)
S	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

S	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	RoundDateTimeForColumnFilter	(Inherited from **ColumnBase**)
	ShowCriteriaInAutoFilterRow	Gets or sets whether or not to display the criteria selector button in the Auto Filter Row. This is a dependency property. (Inherited from **ColumnBase**)
	ShowEmptyDateFilter	Gets or sets whether the date-time column's filter dropdown has a filter item used to select records that contain null values. This is a dependency property. (Inherited from **ColumnBase**)
	ShowInColumnChooser	Gets or sets whether the column's header is displayed within the Column Chooser. This is a dependency property. (Inherited from **ColumnBase**)
	ShowValidationAttributeErrors	Gets or sets whether or not error icons are displayed within column cells that fail validation specified by the Data Annotations attribute(s). This is a dependency property. (Inherited from **ColumnBase**)
	SortIndex	Gets the column's position among sorted columns. (Inherited from **ColumnBase**)
	SortMode	Gets or sets how the column's data is sorted when sorting is applied to it. This is a dependency property. (Inherited from **ColumnBase**)
	SortOrder	Gets or sets the column's sort order. This is a dependency property. (Inherited from **ColumnBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabStop	Gets or sets whether the column can be focused via the TAB key. This is a dependency property. (Inherited from **ColumnBase**)
	Tag	Gets or sets the data associated with the column. (Inherited from **ColumnBase**)
	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	TextTrimming	Gets or sets the text trimming behavior. This is a dependency property.
	TextWrapping	Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property.
	TotalSummaryContentStyle	Gets or sets the style of total summary items displayed within the column. This is a dependency property. (Inherited from **ColumnBase**)
	TotalSummaryText	Gets the text displayed within the summary panel's cell. This is a dependency property. (Inherited from **ColumnBase**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UnboundExpression	Gets or sets an expression used to evaluate values for this column if it is not bound to a data source field. This is a dependency property. (Inherited from **ColumnBase**)
	UnboundType	Gets or sets the data type and binding mode of the column. This is a dependency property. (Inherited from **ColumnBase**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	Gets or sets the vertical alignment of the column contents. This is a dependency property. (Inherited from **ColumnBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Visible	Gets or sets whether the column is displayed within a grid. This is a dependency property. (Inherited from **ColumnBase**)
	VisibleIndex	Gets or sets the column's position among visible columns. This is a dependency property. (Inherited from **ColumnBase**)
	Width	Gets or sets the column width. This is a dependency property. (Inherited from **ColumnBase**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

TextTrimming Property

Gets or sets the text trimming behavior. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property TextTrimming As TextTrimming
```

C#

```
public TextTrimming TextTrimming { get; set; }
```

Property Value

One of the Windows.UI.Xaml.TextTrimming enumeration values.

Remarks

The **TextTrimming** property has no effect unless the TextWrapping property is set to **NoWrap**.

TextWrapping Property

Gets or sets whether the text wraps when it reaches the edge of the cell. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property TextWrapping As TextWrapping
```

C#

```
public TextWrapping TextWrapping { get; set; }
```

Property Value

One of the Windows.UI.Xaml.TextWrapping enumeration values.

Remarks

If text wrapping is enabled, the cell's text automatically wraps if it overflows beyond the available width.

GridTotalSummaryData Members

Contains information about the total summary value displayed within the Total Summary Panel.

The following tables list the members exposed by the GridTotalSummaryData type.

Public Constructors

	Name	Description
	GridTotalSummaryData	Initializes a new instance of the GridTotalSummaryData class.

Public Properties

	Name	Description
	Caption	Gets the summary caption.
	Column	Gets a grid column whose values should be summarized.
	DataControl	Gets the data-aware control which owns the total summary.
	DisplayValue	Gets the value displayed within the total summary item.
	FixedTotalSummaryItemTemplate	Gets the template that defines the presentation of total summary items. This is a dependency property.
	Item	Gets the total summary item.
	Value	Gets the total summary's value. This is a dependency property.

Public Methods

	Name	Description
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Object**)
	GetHashCode	(Inherited from **System.Object**)
	GetType	(Inherited from **System.Object**)
S	ReferenceEquals	(Inherited from **System.Object**)
	ToString	(Inherited from **System.Object**)

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the GridTotalSummaryData class properties has changed its value.

GridTotalSummaryData Constructor

Initializes a new instance of the GridTotalSummaryData class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public New(
   ByVal item As SummaryItemBase,
   ByVal value As Object,
   ByVal column As ColumnBase,
   ByVal dataControl As DataControlBase
)
```

C#

```
public GridTotalSummaryData(
   SummaryItemBase item,
   object value,
   ColumnBase column,
   DataControlBase dataControl
)
```

Parameters

item
A SummaryItemBase object that represents the summary item. This value is assigned to the Item property.
value
A System.Object specifying the summary's value. This value is assigned to the Value property.
column
A ColumnBase object that represents the column for which the summary has been calculated. This value is assigned to the Column property.
dataControl
A DataControlBase descendant that owns the summary.

Caption Property

Gets the summary caption.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Caption As String
```

C#

```
public string Caption { get; }
```

Property Value

A string specifying the summary caption.

Remarks

Use the **Caption** property to get the text displayed above the summary value.

Column Property

Gets a grid column whose values should be summarized.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Column As ColumnBase
```

C#

```
public ColumnBase Column { get; }
```

Property Value

A ColumnBase object that represents the column whose values should be summarized.

DataControl Property

Gets the data-aware control which owns the total summary.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property DataControl As DataControlBase
```

C#

```
public DataControlBase DataControl { get; }
```

Property Value

A DataControlBase descendant that represents the data-aware control to which the current summary belongs.

Remarks

To learn more, see Total Summary.

DisplayValue Property

Gets the value displayed within the total summary item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property DisplayValue As Object
```

C#

```
public object DisplayValue { get; }
```

Property Value

A System.Object value that is displayed within the total summary item.

FixedTotalSummaryItemTemplate Property

Gets the template that defines the presentation of total summary items. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property FixedTotalSummaryItemTemplate As DataTemplate
```

C#

```
public DataTemplate FixedTotalSummaryItemTemplate { get; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of total summary items.

Item Property

Gets the total summary item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Item As SummaryItemBase
```

C#

```
public SummaryItemBase Item { get; }
```

Property Value

A SummaryItemBase object that is the total summary item.

Value Property

Gets the total summary's value. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Value As Object
```

C#

```
public object Value { get; }
```

Property Value

A System.Object value that specifies the summary's value.

event Public PropertyChanged As PropertyChangedEventHandler
```

C#

```
public event PropertyChangedEventHandler PropertyChanged
```

Event Data

The event handler receives an argument of type System.ComponentModel.PropertyChangedEventArgs containing data related to this event.

The following **PropertyChangedEventArgs** properties provide information specific to this event.

GroupSummaryDisplayMode Enumeration

Lists values that specify the position of group summaries within a group row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Enum GroupSummaryDisplayMode
```

C#

```
public enum GroupSummaryDisplayMode
```

Members

Name	Description
AlignByColumns	Group summaries are displayed under the corresponding columns.
Default	Group summaries are aligned to the group row's right.

Remarks

The values listed by this enumeration are used to set the GridControl.GroupSummaryDisplayMode property.

Value	Illustration

HighlightingSettings Class

Contains text settings that are used by the DataControlBase.SearchPanelHighlightingSettings property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Class HighlightingSettings Inherits Object
```
C#
```
public class HighlightingSettings : object
```

Inheritance Hierarchy

System.Object
    HighlightingSettings

HighlightingSettings Members

Contains text settings that are used by the DataControlBase.SearchPanelHighlightingSettings property.

The following tables list the members exposed by the HighlightingSettings type.

Public Constructors

	Name	Description
	HighlightingSettings	Initializes a new instance of the HighlightingSettings class.

Public Properties

	Name	Description
	FontFamily	Gets or sets the font family name of the text.
	FontSize	Gets or sets the size of the text font.
	FontStyle	Gets or sets the style of the text font.
	FontWeight	Gets or sets the weight of the text font.
	Foreground	Gets or sets the brush used to highlight the text that matches the search criteria.

Public Methods

	Name	Description
	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Object**)
	GetHashCode	(Inherited from **System.Object**)
	GetType	(Inherited from **System.Object**)
	ReferenceEquals	(Inherited from **System.Object**)
	ToString	(Inherited from **System.Object**)

FontFamily Property

Gets or sets the font family name of the text.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property FontFamily As FontFamily
```

C#

```
public FontFamily FontFamily { get; set; }
```

Property Value

A Windows.UI.Xaml.Media.FontFamily object representing the font family.

InvalidRowExceptionEventArgs Class

Provides data for the GridControlBase.InvalidRowException event.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class InvalidRowExceptionEventArgs Inherits RowEventArgs, IInvalidRowExceptionEventArgs
```

C#

```
public class InvalidRowExceptionEventArgs : RowEventArgs, IInvalidRowExceptionEventArgs
```

Remarks

The GridControlBase.InvalidRowException event allows you to override the default error presentation. This event occurs after the GridControl.ValidateRow event (provided that the focused row's validation has failed).

The event parameter's ExceptionMode property allows you to specify the action performed in response to entering an invalid value. You can display a message box with an error description, suppress any action, throw an exception or discard new data and revert to an old value. The error description can be specified using the ErrorText property.

An exception that raised this event is returned by the Exception property.

To learn more, see Row Validation.

InvalidRowExceptionEventArgs Constructor

Initializes a new instance of the InvalidRowExceptionEventArgs class.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public New(
   ByVal grid As GridControlBase,
   ByVal rowHandle As Integer,
   ByVal errorText As String,
   ByVal windowCaption As String,
   ByVal exception As Exception,
   ByVal exceptionMode As ExceptionMode
)
```

C#

```
public InvalidRowExceptionEventArgs(
   GridControlBase grid,
   int rowHandle,
   string errorText,
   string windowCaption,
   Exception exception,
   ExceptionMode exceptionMode
)
```

Parameters

grid
A GridControlBase descendant that represents the grid.
rowHandle
An integer value that specifies the handle of the row that failed validation. This value is assigned to the **RowHandle** property.
errorText
A System.String value that specifies the error description. This value is assigned to the ErrorText property.
windowCaption
A System.String value that specifies the caption of the error window. This value is assigned to the WindowCaption property.
exception
A System.Exception object representing the exception that raised the event. This value is assigned to the Exception property.
exceptionMode
An ExceptionMode enumeration value that specifies how an exception should be handled. This value is assigned to the ExceptionMode property.

InvalidRowExceptionEventArgs Properties

Provides data for the GridControlBase.InvalidRowException event.

The following tables list the members exposed by the InvalidRowExceptionEventArgs type.

Public Constructors

	Name	Description
	InvalidRowExceptionEventArgs	Initializes a new instance of the InvalidRowExceptionEventArgs class.

Public Properties

	Name	Description
	ErrorText	Gets or sets the error description.
	Exception	Gets the exception that raised the GridControlBase.InvalidRowException event.
	ExceptionMode	Gets or sets a value that specifies how an exception should be handled.
	Row	Gets the processed row. (Inherited from **RowEventArgs**)
	RowHandle	Gets the processed row's handle. (Inherited from **RowEventArgs**)
	Source	Gets the grid that raised the event. (Inherited from **RowEventArgs**)
	WindowCaption	Gets or sets the error window's caption.

Public Methods

	Name	Description
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Object**)
	GetHashCode	(Inherited from **System.Object**)
	GetType	(Inherited from **System.Object**)

ErrorText Property

Gets or sets the error description.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ErrorText As String
```

C#

```
public string ErrorText { get; set; }
```

Property Value

A string value that specifies the error description.

Remarks

If the ExceptionMode property is set to ExceptionMode.DisplayError, the **ErrorText** property specifies the text displayed within an error message box. The message box's caption is specified by the WindowCaption property.

To learn more, see Row Validation.

Exception Property

Gets the exception that raised the GridControlBase.InvalidRowException event.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Exception As Exception
```

C#

```
public Exception Exception { get; }
```

Property Value

A System.Exception object representing the exception that raised the event.

Remarks

To learn more, see Row Validation.

ExceptionMode Property

Gets or sets a value that specifies how an exception should be handled.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ExceptionMode As ExceptionMode
```

C#

```
public ExceptionMode ExceptionMode { get; set; }
```

Property Value

An ExceptionMode enumeration value that specifies how an exception should be handled.

Remarks

Use the **ExceptionMode** property to specify the action performed when a row has failed validation. You can describe the error and display it in a message box, suppress any action, throw an exception or discard all the changes made.

WindowCaption Property

Gets or sets the error window's caption.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property WindowCaption As String
```

C#

```
public string WindowCaption { get; set; }
```

Property Value

A System.String value that specifies the caption of the error window.

Remarks

The **WindowCaption** property specifies the caption of the message box displayed when the ExceptionMode property is set to ExceptionMode.DisplayError. The text displayed within this message box can be specified, using the ErrorText property.

MultiSelectMode Enumeration

Lists values that specify the selection mode.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Enum MultiSelectMode
```

C#

```
public enum MultiSelectMode
```

Members

Name	Description
Cell	Simple selection of multiple cells.
CellExtended	Extended selection of multiple cells.
None	Multi-selection is disabled.
Row	Simple selection of multiple rows.
RowExtended	Extended selection of multiple rows.

Remarks

The values listed by this enumeration are used to set the DataControlBase.SelectionMode property's value.

NewItemRowPosition Enumeration

Lists values that specify the New Item Row's position.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Enum NewItemRowPosition
```
C#
```
public enum NewItemRowPosition
```

Members

Name	Description
Bottom	The new item row is displayed below all data and grid rows.
None	The new item row is not shown.
Top	The new item row is displayed above all data and grid rows.

Remarks

Values listed by this enumeration are used to set the GridControl.NewItemRowPosition property value.

RowEventArgs Class

Provides data for the GridControl.GroupRowExpanded and GridControl.GroupRowCollapsed events.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class RowEventArgs Inherits EventArgs
```

C#

```
public class RowEventArgs : EventArgs
```

Remarks

The **RowEventArgs** class provides the Row and RowHandle properties, which allow the processed row and its handle to be identified.

RowEventArgs Constructor (GridControlBase, int)

Initializes a new instance of the RowEventArgs class with the specified settings.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New(
   ByVal grid As GridControlBase,
   ByVal rowHandle As Integer
)
```
C#
```
public RowEventArgs(
   GridControlBase grid,
   int rowHandle
)
```

Parameters
grid
A GridControlBase descendant that represents the grid.
rowHandle
An integer value that specifies the processed row's handle. This value is assigned to the RowHandle property.

   ByVal forcedRow As Object
)
```
C#
```
public RowEventArgs(
   GridControlBase grid,
   int rowHandle,
   object forcedRow
)
```

Parameters
grid
A GridControlBase descendant that represents the grid.
rowHandle
An integer value that specifies the processed row's handle. This value is assigned to the RowHandle property.
forcedRow
An object that represents the data object corresponding to the processed row.

Row Property

Gets the processed row.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Row As Object
```

C#

```
public object Row { get; }
```

Property Value

An object that represents the processed row.

Remarks

To obtain the data object that corresponds to the processed row, type cast the **Row** property. The row's handle is returned by the RowHandle property.

Source Property

Gets the grid that raised the event.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Source As GridControlBase
```

C#

```
public GridControlBase Source { get; }
```

Property Value

A GridControlBase descendant that is the grid that raised the event.

RowEventHandler Delegate

Represents a method that will handle the GridControl.GroupRowExpanded and GridControl.GroupRowCollapsed events.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Delegate Sub RowEventHandler(
   ByVal sender As Object,
   ByVal e As RowEventArgs
)
```

C#

```
public delegate void RowEventHandler(
   object sender,
   RowEventArgs e
)
```

Parameters

The declaration of your event handler must have the same parameters as the **RowEventHandler** delegate declaration.
sender
The event source.
e
A RowEventArgs object that contains event data.

ShowFilterPanelMode Enumeration

Lists values that specify when a grid displays the Filter Panel.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Enum ShowFilterPanelMode
```
C#
```
public enum ShowFilterPanelMode
```

Members

Name	Description
Default	The filter panel is shown when data is filtered. Otherwise, the filter panel is hidden.
Never	The filter panel is hidden.
ShowAlways	The filter panel is always shown at the bottom of the grid.

Remarks

The values listed by this enumeration are used to set the DataControlBase.ShowFilterPanelMode property's value.

See Also

ShowSearchPanelMode Enumeration

Lists values that specify when the Search Panel is displayed.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Enum ShowSearchPanelMode
```

C#

```
public enum ShowSearchPanelMode
```

Members

Name	Description
Always	The Search Panel is always visible, it cannot be hidden by an end-user.
Default	Activates the default behavior. If the Search Panel is shown within the Group Panel (the GridControlBase.ShowGroupPanel property is set to **true**) and doesn't contain any search text, it is automatically closed after a delay. **CTRL**+**F** - Invokes the Search Panel. Ensure that no cell editor is opened before invoking the Search Panel. Otherwise, the shortcut will be intercepted by the in-place editor. **ESC** - Clears the search box. If the search box is empty, pressing ESC closes the Search Panel.
Never	The Search Panel is hidden and cannot be shown by the end-user.

Remarks

The values listed by this enumeration are used to set the DataControlBase.ShowSearchPanelMode property's value.

SummaryItemBase Members

Serves as a base for classes that represent summary items.

The following tables list the members exposed by the SummaryItemBase type.

Public Properties

	Name	Description
	Alignment	Gets or sets the summary item's horizontal alignment within the Fixed Summary Panel. This is a dependency property.
	Caption	Gets or sets the caption of the summary item.
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DisplayFormat	Gets or sets the pattern used to format the summary value. This is a dependency property.
	FieldName	Gets or sets the name of a data source field whose values are used for summary calculation. This is a dependency property.
	FixedTotalSummaryItemTemplate	Gets or sets the template that defines the presentation of summary items displayed within the Fixed Summary Panel. This is a dependency property.
	IsLast	This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property.
	ShowInColumn	Gets or sets the summary item's position within the total summary panel (for total summaries) or group row (for group summaries). This is a dependency property.
	SummaryType	Gets or sets the aggregate function type. This is a dependency property.
	Tag	Gets or sets custom data associated with the summary item. This is a dependency property.
	Visible	Gets or sets whether the summary item is displayed within a grid. This is a dependency property.

Public Methods

	Name	Description

SummaryItemBase Members
DevExpress.UI.Xaml.Grid Namespace

© 2018 Developer Express Inc.

Alignment Property

Gets or sets the summary item's horizontal alignment within the Fixed Summary Panel. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Alignment As GridSummaryItemAlignment
```

C#

```
public GridSummaryItemAlignment Alignment { get; set; }
```

Property Value

A GridSummaryItemAlignment enumeration value that specifies the summary item's horizontal alignment within the Fixed Summary Panel.

Remarks

By default, the **Alignment** property is set to GridSummaryItemAlignment.Default.

See Also

SummaryItemBase Class
SummaryItemBase Members
DevExpress.UI.Xaml.Grid Namespace

Caption Property

Gets or sets the caption of the summary item.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Caption As String
```

C#

```
public string Caption { get; set; }
```

Property Value

A string value which specifies the caption.

Remarks

The caption is displayed above the summary value. If the **Caption** property isn't specified, the caption shows the summary type.

Note

To specify the presentation of a summary value, use the DisplayFormat property.

See Also

SummaryItemBase Class

DevExpress.UI.Xaml.Grid Namespace
DisplayFormat

© 2018 Developer Express Inc.

DisplayFormat Property

Gets or sets the pattern used to format the summary value. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property DisplayFormat As String
```

C#

```
public string DisplayFormat { get; set; }
```

Property Value

A System.String value that specifies the pattern used to format the summary value.

Remarks

The summary value is displayed below the Caption.

Use the **DisplayFormat** property to format the summary value and add any text to its textual representation. The general pattern is shown below:

[custom static text] {0:[format specifier][precision specifier]} [custom static text]

- {0} - the summary value's placeholder;
- Format specifier - specifies the formating type (currency, scientific, etc);
- Precision specifier - specifies the number of characters displayed after the decimal point.

Example

To display currency values, set the **DisplayFormat** property to '**{0:c2}**'. If the summary value is **100**, its formatted equivalent will be '**$100.00**'.

FieldName Property

Gets or sets the name of a data source field whose values are used for summary calculation. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property FieldName As String
```

C#

```
public string FieldName { get; set; }
```

Property Value

A System.String value that specifies the name of the data source field whose values are used for summary calculation.

Remarks

If the SummaryType property of a summary item is set to **Count**, it is not necessary to specify its **FieldName**.

FixedTotalSummaryItemTemplate Property

Gets or sets the template that defines the presentation of summary items displayed within the Fixed Summary Panel. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property FixedTotalSummaryItemTemplate As DataTemplate
```

C#

```
public DataTemplate FixedTotalSummaryItemTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of fixed total summary items.

Remarks

The data context for the **FixedTotalSummaryItemTemplate** template is specified by the GridColumnBase class.

IsLast Property

This member supports the internal infrastructure and is not intended to be used directly from your code. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic

```
Public Property IsLast As Boolean
```

C#

```
public bool IsLast { get; set; }
```

Property Value

ShowInColumn Property

Gets or sets the summary item's position within the total summary panel (for total summaries) or group row (for group summaries). This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowInColumn As String
```

C#

```
public string ShowInColumn { get; set; }
```

Property Value

A System.String value that specifies the column's field name.

Remarks

There are two summary types:

- Total Summary

A total summary calculates an aggregate function by all rows and displays the result in a column's footer cells. The **ShowInColumn** property allows you to specify the column in whose footer the total summary should be displayed. If this property isn't specified, the total summary is displayed within the column that is bound to the same field in a data source as the summary item.

- Group Summary

A group summary represents a value of the aggregate function calculated over all data rows within a group. If the grid's GridControl.GroupSummaryDisplayMode property is set to GroupSummaryDisplayMode.AlignByColumns, group summaries are displayed within corresponding columns in a group row. In this instance, the **ShowInColumn** property specifies the group summary item's position within a group row.

SummaryType Property

Gets or sets the aggregate function type. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property SummaryType As SummaryItemType
```

C#

```
public SummaryItemType SummaryType { get; set; }
```

Property Value

A SummaryItemType enumeration value that specifies the aggregate function type.

Remarks

There are five predefined aggregate functions: **Sum**, **Min**, **Max**, **Average** and **Count**. To implement your own aggregate function, set the **SummaryType** property to SummaryItemType.Custom, and handle the GridControl.CustomSummary event.

Tag Property

Gets or sets custom data associated with the summary item. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Property Tag As Object
```

C#

```
public object Tag { get; set; }
```

Property Value

An object associated with the summary item.

Visible Property

Gets or sets whether the summary item is displayed within a grid. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public Property Visible As Boolean
```
C#
```
public bool Visible { get; set; }
```

Property Value

true to display the summary item within a grid; otherwise, **false**.

GetFooterDisplayText Method

Returns the total summary item's text displayed within the summary panel.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetFooterDisplayText(
   ByVal language As IFormatProvider,
   ByVal columnCaption As String,
   ByVal value As Object,
   ByVal columnDisplayFormat As String
) As String
```

C#

```
public string GetFooterDisplayText(
   IFormatProvider language,
   string columnCaption,
   object value,
   string columnDisplayFormat
)
```

Parameters

language
The language.
columnCaption
A System.String value that specifies the column's caption.
value
The summary item's value.
columnDisplayFormat
A System.String value that specifies the pattern used to format column values.

Return Value

A System.String value that is the total summary item's text displayed within the summary panel.

GetGroupColumnDisplayText Method

Returns the text corresponding to a group summary item. This text is displayed within group rows and is aligned to the specified column.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic

```
Public Function GetGroupColumnDisplayText(
   ByVal language As IFormatProvider,
   ByVal columnCaption As String,
   ByVal value As Object,
   ByVal columnDisplayFormat As String
) As String
```

C#

```
public string GetGroupColumnDisplayText(
   IFormatProvider language,
   string columnCaption,
   object value,
   string columnDisplayFormat
)
```

Parameters
language
The language.
columnCaption
A System.String value that specifies the column's caption.
value
The group summary item's value.
columnDisplayFormat
A System.String value that specifies the pattern used to format column values.

Return Value

A System.String value that specifies the group summary item's text.

GetGroupDisplayText Method

Returns the text corresponding to a group summary item. This text is displayed within group rows.

Namespace: DevExpress.UI.Xaml.Grid
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Function GetGroupDisplayText(
   ByVal language As IFormatProvider,
   ByVal columnCaption As String,
   ByVal value As Object,
   ByVal columnDisplayFormat As String
) As String
```

C#

```
public string GetGroupDisplayText(
   IFormatProvider language,
   string columnCaption,
   object value,
   string columnDisplayFormat
)
```

Parameters

language
The language.
columnCaption
A System.String value that specifies the column's caption.
value
The group summary item's value.
columnDisplayFormat
A System.String value that specifies the pattern used to format column values.

Return Value

A System.String value that specifies the group summary item's text.

DevExpress.Ui.Xaml.Grid.Native

Contains classes which implement the basic functionality of the DevExpress Grid Control.

Classes

	Class	Description
	GridRowValidationEventArgs	Provides data for the GridControl.ValidateRow event.

© 2018 Developer Express Inc.

GridRowValidationEventArgs Class

Provides data for the GridControl.ValidateRow event.

Namespace: DevExpress.UI.Xaml.Grid.Native
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Public Class GridRowValidationEventArgs Inherits ValidationEventArgs
```

C#

```
public class GridRowValidationEventArgs : ValidationEventArgs
```

Remarks

Row validation is performed within the GridControl.ValidateRow event handler, when a row is about to lose focus. The processed row is returned by the Row property. Its handle is returned by the RowHandle property. After cell values have been obtained, you can verify whether the values meet your validity criteria. If the row fails validation, set the event's ValidationEventArgs.IsValid parameter to **false**. Otherwise, leave the ValidationEventArgs.IsValid parameter set to **true**.

To learn more, see Row Validation.

Inheritance Hierarchy

GridRowValidationEventArgs Members

Provides data for the GridControl.ValidateRow event.

The following tables list the members exposed by the GridRowValidationEventArgs type.

Public Constructors

	Name	Description
	GridRowValidationEventArgs	Initializes a new instance of the GridRowValidationEventArgs class.

Public Properties

	Name	Description
	ErrorContent	Gets or sets an object that describes the validation error. (Inherited from **ValidationEventArgs**)
	ErrorType	Gets or sets the error type. (Inherited from **ValidationEventArgs**)
	Handled	(Inherited from **DevExpress.UI.Xaml.Editors.Native.EventArgsBase**)
	IsValid	Gets or sets a value specifying whether the value is valid. (Inherited from **ValidationEventArgs**)
	Row	Gets the processed row.
	RowHandle	Gets the processed row's handle.
	UpdateSource	Gets the action that caused the validation. (Inherited from **ValidationEventArgs**)
	Value	Gets the editor's value. (Inherited from **ValidationEventArgs**)

Public Methods

	Name	Description
	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Object**)
	GetHashCode	(Inherited from **System.Object**)

GridRowValidationEventArgs Constructor

Initializes a new instance of the GridRowValidationEventArgs class.

Namespace: DevExpress.UI.Xaml.Grid.Native
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public New(
   ByVal row As Object,
   ByVal rowHandle As Integer
)
```
C#
```
public GridRowValidationEventArgs(
   object row,
   int rowHandle
)
```

Parameters
row
A validated row.
rowHandle
The validated row's handle.

Row Property

Gets the processed row.

Namespace: DevExpress.UI.Xaml.Grid.Native
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax
Visual Basic
```
Public ReadOnly Property Row As Object
```
C#
```
public object Row { get; }
```

Property Value

An object that represents the row currently being validated.

RowHandle Property

Gets the processed row's handle.

Namespace: DevExpress.UI.Xaml.Grid.Native
Assembly: DevExpress.UI.Xaml.Grid.v18.1.dll

Syntax

Visual Basic

```
Overridable Public ReadOnly Property RowHandle As Integer
```

C#

```
public virtual int RowHandle { get; }
```

Property Value

An integer value that specifies the processed row's handle.

DevExpress.UI.Xaml.Layout

Contains classes used to build a layout of controls within your applications.

Classes

	Class	Description
	DXFrame	Represents a frame with extended functionality.
	DXGridView	Stacks data items horizontally.
	DXListView	Displays items as a vertical scrollable list.
	ExpandContainer	Combines controls into a headered container that supports the collapse/expand functionality.
	GroupContainer	Combines controls into a titled group.
	HamburgerMenu	Represents a collapsible navigation menu that displays a stack of navigation buttons. Supports regular buttons, sub-menus, hyperlinks, check and radio buttons.
	HamburgerMenuBottomBarCheckBox	Represents an icon-only button in the HamburgerMenu's Bottom Bar that an end-user can select (check) or clear (uncheck).
	HamburgerMenuBottomBarNavigationButton	Represents a icon-only button in the Bottom Bar of the HamburgerMenu that navigates to the specified page with a click.
	HamburgerMenuBottomBarRadioButton	Represents an icon-only button in the HamburgerMenu's Bottom Bar that allows an end-user to select an option from a group of options.
	HamburgerMenuFrame	Represents a frame with two views; one view to display navigation commands using the built-in HamburgerMenu, and another view to display the navigated pages.
	HamburgerMenuHyperlinkButton	Represents a button in the HamburgerMenu that functions as a hyperlink.
	HamburgerMenuNavigationButton	Represents a button with an icon in the Main Menu of the HamburgerMenu that navigates to the specified page with a click.
	HamburgerSubMenu	Represents a button with an icon in the HamburgerMenu that provides access to a Sub Menu.
	HamburgerSubMenuNavigationButton	Represents a button with an icon in the HamburgerMenu's sub-menu.
	HeaderedContentContainer	The base class for headered controls displaying specific content and supporting header styling and alignment.
	HeaderedItemsContainer	The base class for headered item containers supporting header styling and alignment.

© 2018 Developer Express Inc.

	LayoutAwareDecorator	Allows you to manage a control's visibility in specific app states.
	LayoutControl	A control container that arranges its items in a single column or row, and allows you to create compound layouts of controls, with the ability to combine the controls into groups and align the controls according to their headers.
	LayoutGroup	A group of horizontally or vertically aligned items.
	LayoutItem	A control that consists of a header and content regions.
	MasterDetailPageContent	Allows you to implement the Master-Detail Pattern.
	SuspensionManager	
	TabbedContainer	Presents items as tab pages with tab headers displayed at the top.
	TabbedContainerItem	An item within the TabbedContainer control.
	Tile	Represent a simple tile that can display a notification header, can be checked and selected.
	TileBase	The base class for tiles.

Enumerations

	Enumeration	Description
	HamburgerMenuAvailableViewStates	Lists values that specify the available view states for the Hamburger Menu.
	HamburgerMenuBottomBarNavigationButtonPlacement	Lists values that specify a Bottom Bar navigation button's horizontal alignment.
	HamburgerMenuNavigationButtonPlacement	Lists values that specify a navigation button's vertical alignment.
	HeaderAlignment	Contains values that specify whether a specific LayoutItem's header is aligned according to the alignment setting of the group where the item resides.
	HeaderPosition	Enumerates possible positions of a LayoutItem's header relative to its content region.
	HeadersAlignment	Contains values that specify how LayoutItem headers are aligned within a specific LayoutGroup.
	ItemSizeMode	Contains values that specify how items are resized within a LayoutGroup.
	LayoutOrientation	Enumerates values that specify how LayoutItems are arranged within a LayoutGroup.
	MasterDetailPageContentSplitterMode	Lists values that specify the visual representation of the splitter.

© 2018 Developer Express Inc.

	MasterDetailPageContentThresholdMode	Lists values that specify whether the stacked state threshold is the total width of master and content panes or the width of the content pane.
	MasterDetailPageContentViewState	Lists values that specify the current display mode.
	ViewStateVisibility	A set of flags that enumerate app states.

DXFrame Class

Represents a frame with extended functionality.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class DXFrame Inherits Frame, IDXFrame,
  ISupportSplashScreen,
  IWindowTitleCustomizer,
  ISupportNavigationState
```

C#

```
public class DXFrame : Frame, IDXFrame,
  ISupportSplashScreen,
  IWindowTitleCustomizer,
  ISupportNavigationState
```

Remarks

In addition to the common frame functionality, **DXFrame** provides the following features:

- Customizable Title
- Splash Screen Support
- Interaction with ViewModels
- Suspend/Resume the Embedded Controls

Customizable Title

The **DXFrame** allows you to customize the window title (WindowTitle). This functionality is managed by the AllowCustomizingWindowTitle property.

Splash Screen Support

The **DXFrame** class implements a special interface that allows you to show splash screens. To learn more about splash screens, refer to SplashScreenService.

Interaction with ViewModels

The **DXFrame** supports several interfaces that allow you implement interaction between pages and ViewModels.

- **ISupportNavigationEvents** - provides methods that are called during navigation to a View.
- **ISupportGoBack** - provides methods to control backward navigation.
- **ISupportBackButton** - provides a method that is called when the Back button is pressed.
- **ISupportParameter** - provides a member that allows data to be passed between ViewModels.

Suspend/Resume the Embedded Controls

The **DXFrame** automatically saves\loads the state of the controls implementing **ISupportSaveLoadControlState** interface on application suspending\resuming and provides a local data storage to save\load view models state.

Inheritance Hierarchy

AllowCustomizingWindowTitle Property

Gets or sets whether it is allowed to customize the window title. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowCustomizingWindowTitle As Boolean
```

C#

```
public bool AllowCustomizingWindowTitle { get; set; }
```

Property Value

true, if it is allowed to customize the window title; otherwise, **false**.

HideBackButton Property

Gets or sets whether the **Back** button is shown. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HideBackButton As Boolean
```

C#

```
public bool HideBackButton { get; set; }
```

Property Value

true, if the **Back** button is shown; otherwise, **false**.

IsMobileStatusBarVisible Property

Gets or sets whether the status bar for the window (app view) is shown. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IsMobileStatusBarVisible As Boolean
```

C#

```
public bool IsMobileStatusBarVisible { get; set; }
```

Property Value

true, if the status bar for the window (app view) is shown; otherwise, **false**.

MobileStatusBarBackground Property

Gets or sets the background color of the status bar. The alpha channel of the color is not used. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property MobileStatusBarBackground As SolidColorBrush
```

C#

```
public SolidColorBrush MobileStatusBarBackground { get; set; }
```

Property Value

The background color of the status bar.

MobileStatusBarForeground

© 2018 Developer Express Inc.

MobileStatusBarForeground Property

Gets or sets the foreground color of the status bar. The alpha channel of the color is not used. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property MobileStatusBarForeground As SolidColorBrush
```

C#

```
public SolidColorBrush MobileStatusBarForeground { get; set; }
```

Property Value

The foreground color of the status bar.

NavigationTypeProvider Property

Gets or sets the provider used to obtain types by their names. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property NavigationTypeProvider As TypeProviderBase
```

C#

```
public TypeProviderBase NavigationTypeProvider { get; set; }
```

Property Value

A TypeProviderBase object specifying the provider.

SyncRequestedThemeWithThemeManager Property

Gets or sets whether the frame's RequestedTheme property value is synchronized with the ThemeManager.RequestedTheme property. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SyncRequestedThemeWithThemeManager As Boolean
```

C#

```
public bool SyncRequestedThemeWithThemeManager { get; set; }
```

Property Value

true, if the frame's RequestedTheme property value is synchronized with the ThemeManager.RequestedTheme property; otherwise, **false**.

ViewModel Property

Gets or sets the frame's ViewModel. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ViewModel As Object
```

C#

```
public object ViewModel { get; set; }
```

Property Value

A Object object specifying the frame's ViewModel.

WindowTitle Property

Gets or sets the window title. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property WindowTitle As String
```

C#

```
public string WindowTitle { get; set; }
```

Property Value

A String value that specifies the window title.

WindowTitleSettings Property

Gets or sets the window title settings, such as the background and foreground colors. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property WindowTitleSettings As TitleSettings
```

C#

```
public TitleSettings WindowTitleSettings { get; set; }
```

Property Value

The TitleSettings object that comprises the window title settings.

ProcessBackButton Method

NOTE: This member is now obsolete.

This method is obsolete. More information: https://www.devexpress.com/bcid=BC3932

This method is obsolete.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Function ProcessBackButton(
   ByVal e As BackRequestedEventArgs
) As Boolean
```

C#

```
public bool ProcessBackButton(
   BackRequestedEventArgs e
)
```

Parameters

e

Return Value

DXGridView Class

Stacks data items horizontally.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

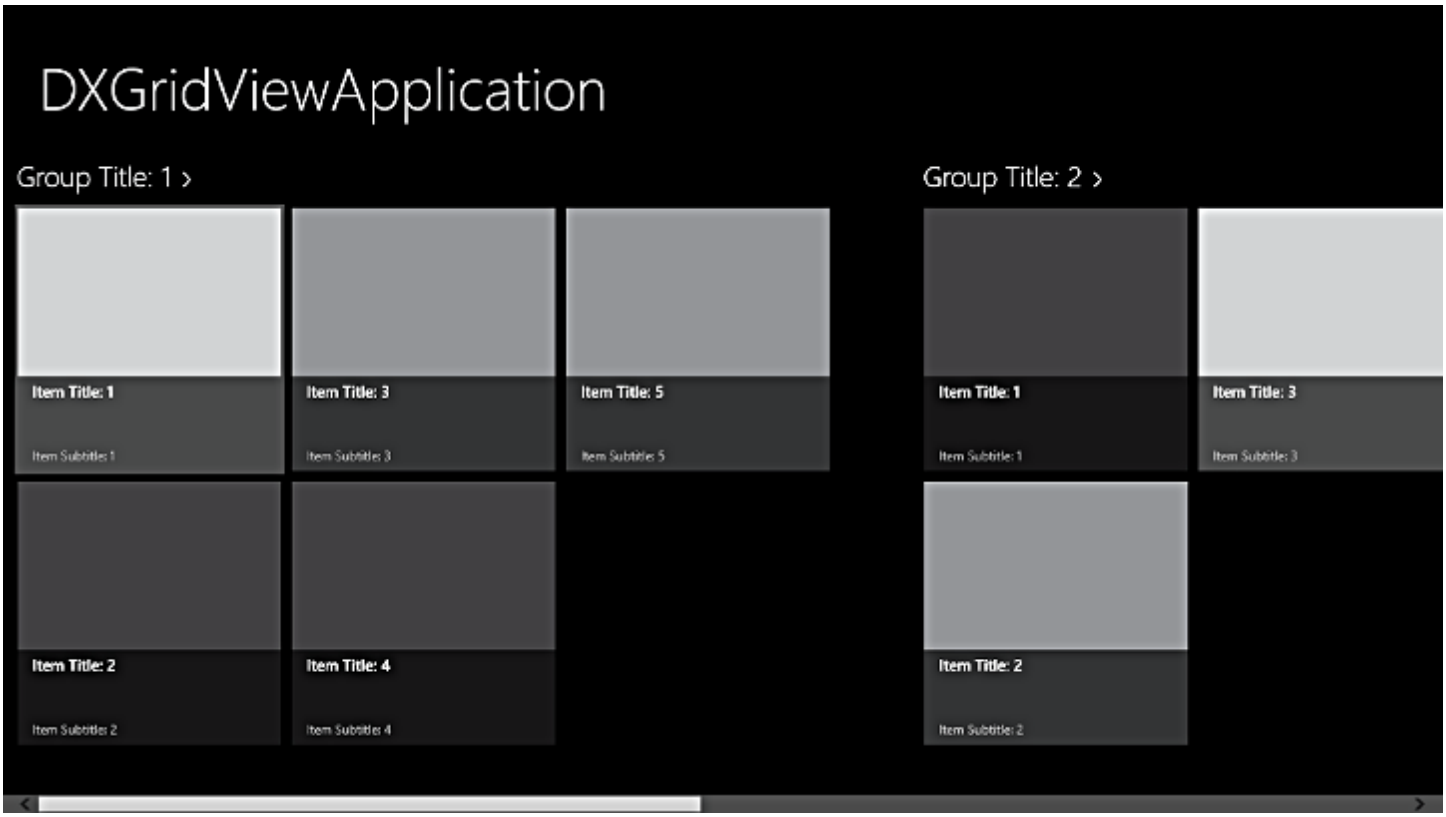
```
Public Class DXGridView Inherits GridView, IDXListView,
  ISupportSaveLoadControlState,
  IScrollableControl
```

C#

```
public class DXGridView : GridView, IDXListView,
  ISupportSaveLoadControlState,
  IScrollableControl
```

Remarks

You can add items to the **DXGridView** directly via the **Items** inherited collection. To create items from data stored in a data source, use the **ItemsSource** and **ItemTemplate** inherited properties.



The DXGridView control is a descendant of the standard GridView class, so it inherits the GridView's built-in functionality and extends it with these:

- The ItemNavigationTargetType property - Allows you to specify a page to be opened when an end-user clicks an item within the DXGridView.
- The ItemClickCommand property - Specifies the command to be invoked on an item click.
- The ZoomOutItemTemplate and ZoomOutItemTemplateSelector properties - Allows you to specify an item presentation when zooming out.
- Saving/restoring a scroll position when the application is suspended/resumed (this feature is supported when the DXGridView resides within a DXPage).

DXGridView Members

Stacks data items horizontally.

The following tables list the members exposed by the DXGridView type.

Public Constructors

	Name	Description
	DXGridView	Initializes a new instance of the DXGridView class.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

DXGridView Constructor

Initializes a new instance of the DXGridView class.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public DXGridView()
```

ItemClickCommand Property

Gets or sets the command to be invoked on an item click.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemClickCommand As ICommand
```

C#

```
public ICommand ItemClickCommand { get; set; }
```

Property Value

A System.Windows.Input.ICommand object that specifies the command to be invoked on an item click.

Remarks

When an end-user clicks an item, the ItemClickCommand is invoked. Then, the control navigates to the page specified by the ItemNavigationTargetType or ItemNavigationTargetTypeBinding property.

ItemNavigationTargetParameterBinding Property

Gets or sets a binding that defines a parameter to be passed to the target page, invoked when clicking an item.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemNavigationTargetParameterBinding As BindingBase
```

C#

```
public BindingBase ItemNavigationTargetParameterBinding { get; set; }
```

Property Value

A binding that defines a parameter to be passed to the target page, invoked when clicking an item.

ItemNavigationTargetType Property

Allows you to specify the name of the Page class to be opened when an end-user clicks a DXGridView item.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemNavigationTargetType As String
```

C#

```
public string ItemNavigationTargetType { get; set; }
```

Property Value

The name of the Page class to be opened when an end-user clicks a DXGridView item.

Remarks

When an end-user clicks an item, the DXListView.ItemClickCommand is invoked. Then, the control navigates to the page specified by the **ItemNavigationTargetType** or ItemNavigationTargetTypeBinding property.

The **ItemNavigationTargetType** property specifies the name of the Page class to be opened when an end-user clicks a DXGridView item. You can also specify the target Page class using a data binding via the DXListView.ItemNavigationTargetTypeBinding property.

ItemNavigationTargetTypeBinding Property

Gets or sets a binding that allows you to specify the name of the Page class to be opened when an end-user clicks a DXGridView item.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemNavigationTargetTypeBinding As BindingBase
```

C#

```
public BindingBase ItemNavigationTargetTypeBinding { get; set; }
```

Property Value

The binding that allows you to specify the name of the Page class to be opened when an end-user clicks a DXGridView item.

Remarks

You can also specify the target Page class name via the ItemNavigationTargetType property.

ZoomOutItemTemplate Property

Gets or sets the template used to render an item when the DXGridView is zoomed out.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ZoomOutItemTemplate As DataTemplate
```

C#

```
public DataTemplate ZoomOutItemTemplate { get; set; }
```

Property Value

A DataTemplate used to render an item when the DXGridView is zoomed out.

Remarks

See the **Data Templating Overview** topic in MSDN to learn more.

ZoomOutItemTemplateSelector Property

Gets or sets an object that chooses an item template in the zoom-out state based on custom logic.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ZoomOutItemTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ZoomOutItemTemplateSelector { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

See the **Data Templating Overview** topic in MSDN to learn more.

DXListView Class

Displays items as a vertical scrollable list.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

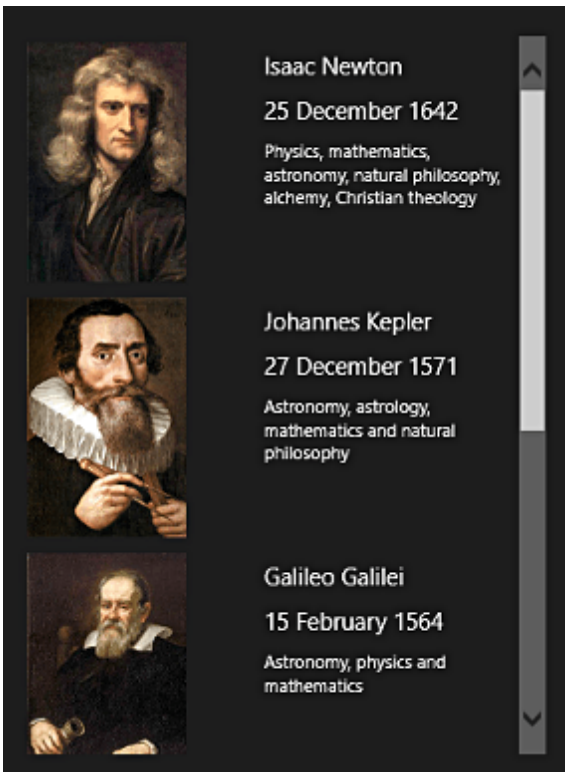
```
Public Class DXListView Inherits ListView, IDXListView,
  ISupportSaveLoadControlState,
  IScrollableControl
```

C#

```
public class DXListView : ListView, IDXListView,
  ISupportSaveLoadControlState,
  IScrollableControl
```

Remarks

You can add items to the **DXListView** directly via the **Items** inherited collection. To create items from data stored in a data source, use the **ItemsSource** and **ItemTemplate** inherited properties. An example at the bottom of this topic illustrates this approach.



The DXListView control is a descendant of the standard ListView class. So, it inherits the ListView's built-in functionality and extends it with these:

- The ItemNavigationTargetType property - Allows you to specify a page to be opened when an end-user clicks a DXListView item;
- The ItemClickCommand property - Specifies the command to be invoked on an item click;
- Saving/restoring a scroll position when the application is suspended/resumed (this feature is supported when the DXListView resides within a DXPage).

DXListView Constructor

Initializes a new instance of the DXListView class.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public DXListView()
```

DXListView Properties

Displays items as a vertical scrollable list.

The following tables list the members exposed by the DXListView type.

Public Constructors

	Name	Description
	DXListView	Initializes a new instance of the DXListView class.

Public Properties

ItemClickCommand Property

Gets or sets the command to be invoked on an item click.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemClickCommand As ICommand
```

C#

```
public ICommand ItemClickCommand { get; set; }
```

Property Value

A System.Windows.Input.ICommand object that specifies the command to be invoked on an item click.

Remarks

When an end-user clicks an item, the ItemClickCommand is invoked. Then, the control navigates to the page specified by the ItemNavigationTargetType or ItemNavigationTargetTypeBinding property.

ItemNavigationTargetParameterBinding Property

Gets or sets a binding that defines a parameter to be passed to the target page, invoked when clicking an item.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemNavigationTargetParameterBinding As BindingBase
```

C#

```
public BindingBase ItemNavigationTargetParameterBinding { get; set; }
```

Property Value

A binding that defines a parameter to be passed to the target page, invoked when clicking an item.

ItemNavigationTargetType Property

Allows you to specify the name of the Page class to be opened when an end-user clicks a DXListView item.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemNavigationTargetType As String
```

C#

```
public string ItemNavigationTargetType { get; set; }
```

Property Value

The name of the Page class to be opened when an end-user clicks a DXListView item.

Remarks

When an end-user clicks an item, the ItemClickCommand is invoked. Then, the control navigates to the page specified by the **ItemNavigationTargetType** or ItemNavigationTargetTypeBinding property.

The **ItemNavigationTargetType** property specifies the name of the Page class to be opened when an end-user clicks a DXListView item. You can also specify the target Page class using a data binding via the ItemNavigationTargetTypeBinding property.

ItemNavigationTargetTypeBinding Property

Gets or sets a binding that allows you to specify the name of the Page class to be opened when an end-user clicks a DXListView item.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemNavigationTargetTypeBinding As BindingBase
```

C#

```
public BindingBase ItemNavigationTargetTypeBinding { get; set; }
```

Property Value

The binding that allows you to specify the name of the Page class to be opened when an end-user clicks a DXListView item.

Remarks

You can also specify the target Page class name via the ItemNavigationTargetType property.

ExpandContainer Class

Combines controls into a headered container that supports the collapse/expand functionality.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class ExpandContainer Inherits HeaderedContentContainer
```

C#

```
public class ExpandContainer : HeaderedContentContainer
```

Remarks

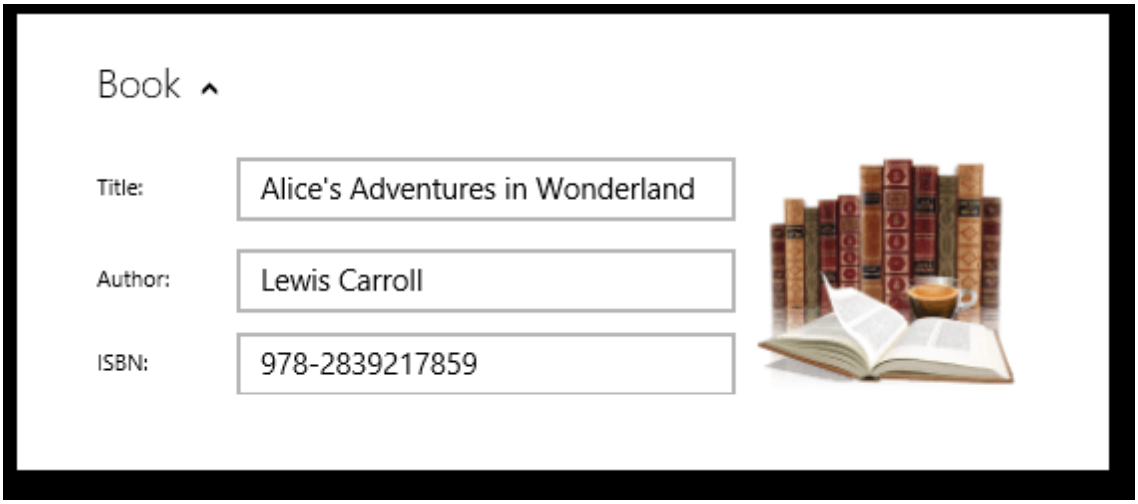
The **ExpandContainer**, as its name suggests, supports the expand/collapse functionality. An end-user can expand/collapse the container via a dedicated button. In code, the container's expansion state can be changed via the IsExpanded property. The Expanded and Collapsed events help you respond to an expansion state change.

The **ExpandContainer** supports a single child. You can place any control inside the container. This can be a StackPanel, Grid, etc.

Expandable containers are also supported by the LayoutControl, which is a control providing advanced layout features. To create an expandable container within a LayoutControl, create a LayoutGroup and set its LayoutGroup.AllowExpand property to **true**.

Example

The following example creates an ExpandContainer containing a Grid with sample controls:



Xaml	

© 2018 Developer Express Inc.

```
xmlns:Layout="using:DevExpress.UI.Xaml.Layout"
<StackPanel Width="550" Background="{StaticResource ApplicationPageBackgroundThemeBrush}">
    <Layout:ExpandContainer  Header="Book" >
        <Grid x:Name="LayoutRoot" Width="480" Height="135">
            <Grid.ColumnDefinitions>
                <ColumnDefinition Width="70" />
                <ColumnDefinition Width="250" />
                <ColumnDefinition Width="150" />
            </Grid.ColumnDefinitions>
            <Grid.RowDefinitions>
                <RowDefinition Height="50" />
                <RowDefinition Height="42" />
                <RowDefinition Height="42"/>
            </Grid.RowDefinitions>
            <TextBlock Text="Title:" Grid.Column="0" Grid.Row="0" VerticalAlignment="Center"/>
            <TextBlock Text="Author:" Grid.Column="0" Grid.Row="1" VerticalAlignment="Center"/>
            <TextBlock Text="ISBN:" Grid.Column="0" Grid.Row="2" VerticalAlignment="Center"/>
            <TextBox Text="Alice's Adventures in Wonderland" Grid.Column="1" Grid.Row="0" VerticalAlignmer
            <TextBox Text="Lewis Carroll" Grid.Column="1" Grid.Row="1" VerticalAlignment="Center"/>
            <TextBox Text="978-2839217859" Grid.Column="1" Grid.Row="2" VerticalAlignment="Center"/>
            <Image Grid.Column="2" Grid.Row="0" Grid.RowSpan="3" Source="Images/Books.png"/>
        </Grid>
    </Layout:ExpandContainer>
</StackPanel>
```

ExpandContainer Members

Combines controls into a headered container that supports the collapse/expand functionality.

The following tables list the members exposed by the ExpandContainer type.

Public Constructors

	Name	Description
	ExpandContainer	Initializes a new instance of the ExpandContainer class.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

ExpandContainer Constructor

Initializes a new instance of the ExpandContainer class.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public ExpandContainer()
```

ExpandContainer Properties

Combines controls into a headered container that supports the collapse/expand functionality.

The following tables list the members exposed by the ExpandContainer type.

Public Constructors

	Name	Description
	ExpandContainer	Initializes a new instance of the ExpandContainer class.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

ExpandButtonStyle Property

Gets or sets the style applied to the container's Expand button.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ExpandButtonStyle As Style
```

C#

```
public Style ExpandButtonStyle { get; set; }
```

Property Value

The style applied to the container's Expand button.

Remarks

The type for which the style is intended (**TargetType**) is **ExpandButton**.

IsExpanded Property

Gets or sets whether the container is expanded.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IsExpanded As Boolean
```

C#

```
public bool IsExpanded { get; set; }
```

Property Value

true if the container is expanded; otherwise, **false**.

Remarks

Use the **IsExpanded** property to expand/collapse the container in code. An end-user can expand/collapse the container via an Expand button.

Collapsed Event

Fires when the container is collapsed.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
event Public Collapsed As EventHandler
```
C#
```
public event EventHandler Collapsed
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

Expanded Event

Fires when the container is expanded.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
event Public Expanded As EventHandler
```
C#
```
public event EventHandler Expanded
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

GroupContainer Class

Combines controls into a titled group.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class GroupContainer Inherits HeaderedContentContainer
```

C#

```
public class GroupContainer : HeaderedContentContainer
```

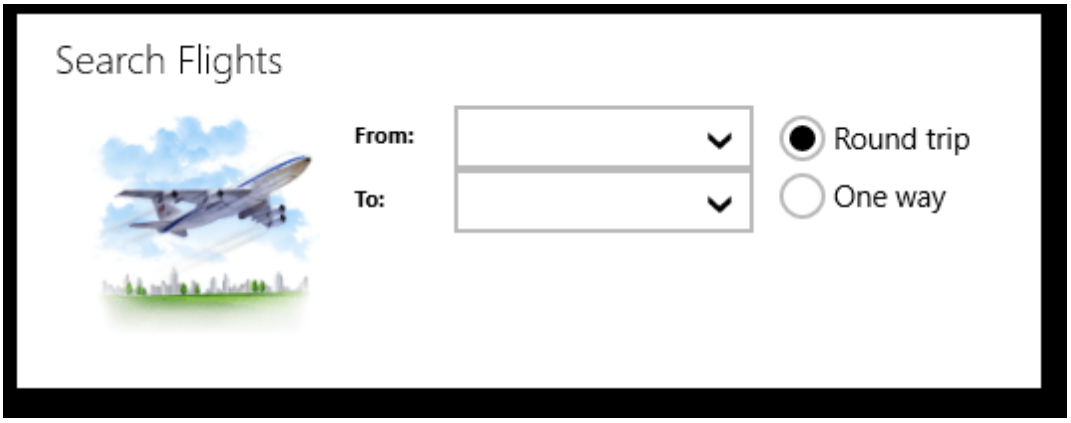
Remarks

The **GroupContainer** supports a single child. You can place any control inside the container. This can be a StackPanel, Grid, etc.

Use the veHeaderedContentControl.Header inherited property to provide a title for the container.

Example

The following code creates a GroupContainer displaying a Grid with sample controls:



Xaml	

© 2018 Developer Express Inc.

```
xmlns:Layout="using:DevExpress.UI.Xaml.Layout"
<Layout:GroupContainer  Header="Search Flights" >
    <Grid x:Name="LayoutRoot" Height="135">
        <Grid.ColumnDefinitions>
            <ColumnDefinition Width="150" />
            <ColumnDefinition Width="50" />
            <ColumnDefinition Width="150" />
            <ColumnDefinition Width="150" />

GroupContainer Members

Combines controls into a titled group.

The following tables list the members exposed by the GroupContainer type.

Public Constructors

	Name	Description
	GroupContainer	Initializes a new instance of the GroupContainer class.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

GroupContainer Constructor

Initializes a new instance of the GroupContainer class.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public GroupContainer()
```

HamburgerMenu Class

Represents a collapsible navigation menu that displays a stack of navigation buttons. Supports regular buttons, sub-menus, hyperlinks, check and radio buttons.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class HamburgerMenu Inherits Control, IHamburgerMenuStateSupportInternal
```

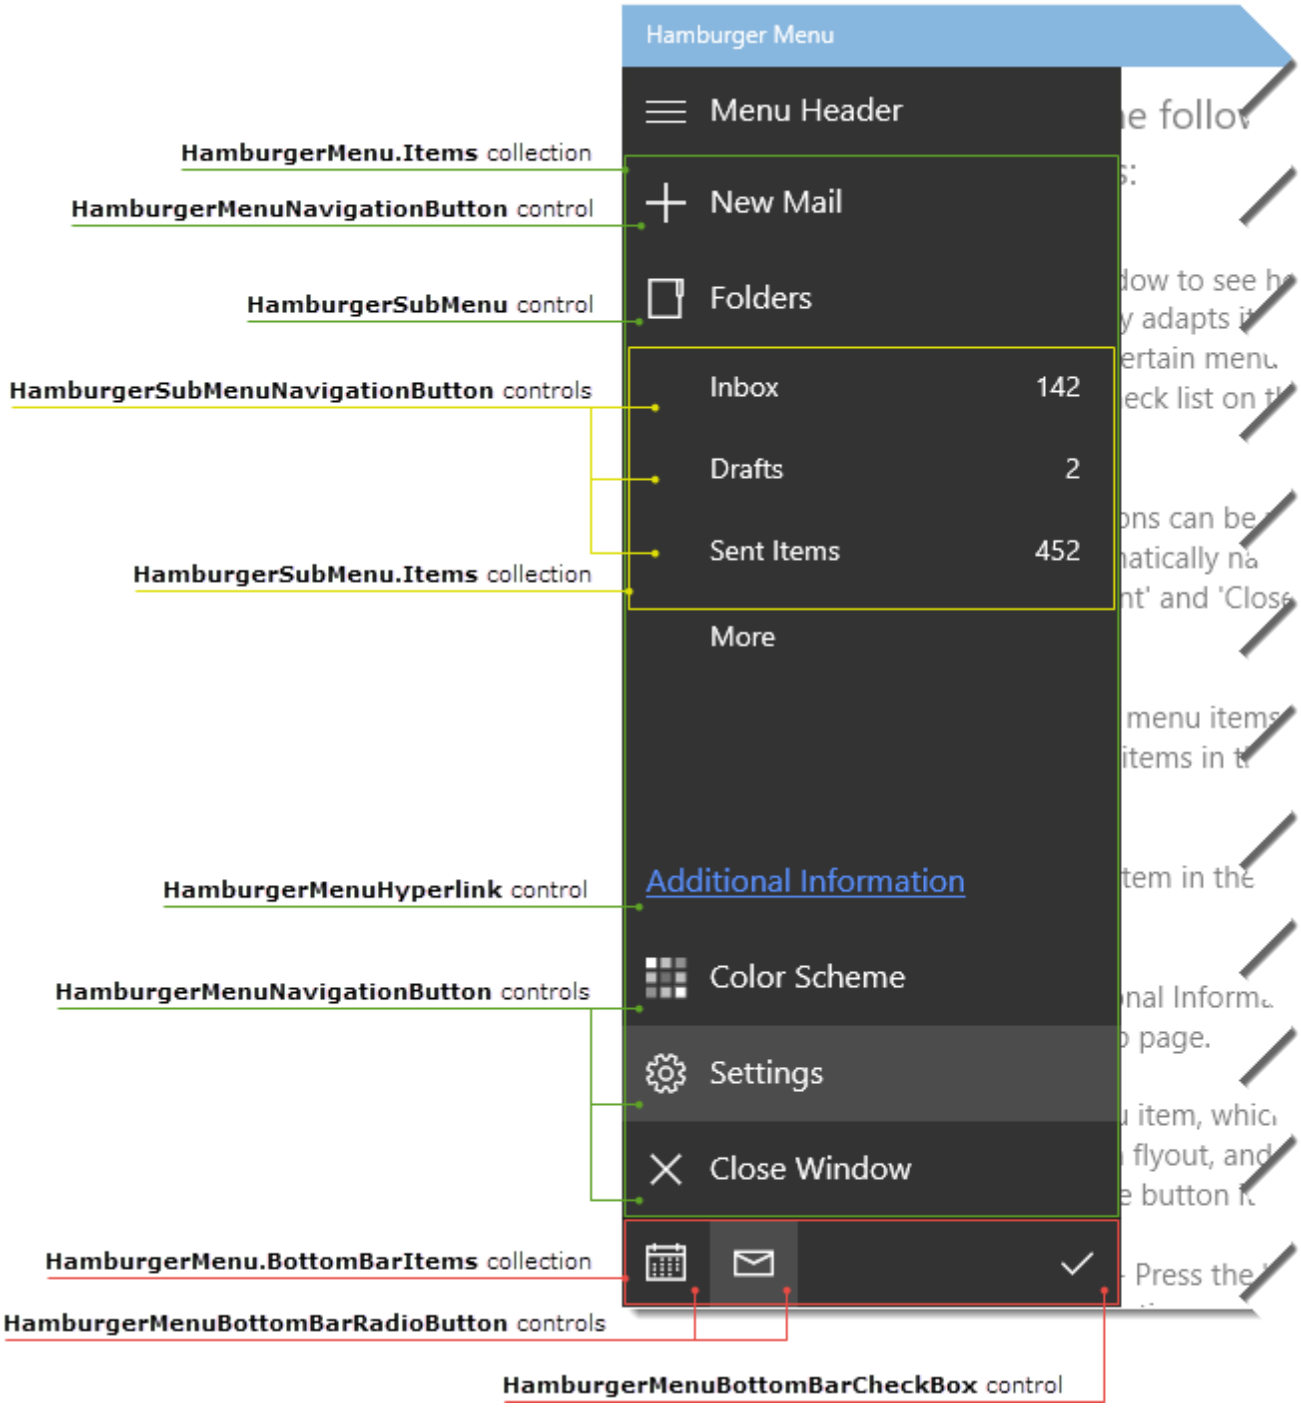
C#

```
public class HamburgerMenu : Control, IHamburgerMenuStateSupportInternal
```

Remarks

The image below shows the main menu, the bottom bar, and buttons of the HamburgerMenu.

© 2018 Developer Express Inc.



The following XAML code snippet shows how to create the menu illustrated in the image above.

Xaml	

```
xmlns:Layout="using:DevExpress.UI.Xaml.Layout"
<Layout:HamburgerMenu
    WindowTitle="{Binding Title}"
    AllowCustomizingWindowTitle="{Binding AllowCustomizingWindowTitle}"
    Header="{Binding Header}"
    ShowMenuOnEmptySpaceBarClick="{Binding ShowMenuOnEmptySpaceBarClick}"
    AvailableViewStates="{Binding AvailableViewStates}"
    Width="250">
    <Layout:HamburgerMenu.Items>
        <Layout:HamburgerMenuNavigationButton Content="New Mail"
                                              NavigationTargetType="local:HamburgerMenuDemo_NewMailPage"
                                              HideMenuWhenSelected="True">
            <Layout:HamburgerMenuNavigationButton.Icon>
                <FontIcon FontFamily="Segoe MDL2 Assets"
                          Glyph="&#xE710;" />
            </Layout:HamburgerMenuNavigationButton.Icon>
        </Layout:HamburgerMenuNavigationButton>
        <Layout:HamburgerSubMenu Content="Folders">
            <Layout:HamburgerSubMenu.Icon>
                <FontIcon FontFamily="Segoe MDL2 Assets"
                          Glyph="&#xE8B7;" />

HamburgerMenu Members

Represents a collapsible navigation menu that displays a stack of navigation buttons. Supports regular buttons, sub-menus, hyperlinks, check and radio buttons.

The following tables list the members exposed by the HamburgerMenu type.

Public Constructors

	Name	Description
	HamburgerMenu	Initializes a new instance of the HamburgerMenu class with the default settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowCustomizingWindowTitle	Gets or sets whether it is allowed to customize the window title.
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AvailableViewStates	Gets or sets whether the menu can be displayed in the Flyout, Overlay and/or Inline state.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

© 2018 Developer Express Inc.

		)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BottomBarItems	Provides access to a collection of objects that represent Bottom Bar items.
	BottomBarItemsSource	Gets or sets an object that represents a source of items for the menu's bottom bar.
	BottomBarItemTemplate	Gets or sets the data template used to render each item in the menu's bottom bar from the data source.
	BottomBarItemTemplateSelector	Gets or sets a custom data template selection logic for items in the menu's bottom bar.
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompactOverlayStateFrameThreshold	Gets or sets the window width, in pixels, at which the menu is automatically displayed in the Overlay state. This property supports the adaptive layout.
	CompactWidth	Gets or sets the menu pane width, in pixels, in its compact display mode.
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**

© 2018 Developer Express Inc.

		)
	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Header	Gets or sets the menu header displayed next to the hamburger button.
	HeaderHeight	Gets or sets the height of the menu header.
	HeaderPadding	Gets or sets the outer margin of the menu header.
	HeaderTemplate	Gets or sets the data template used to render the menu header.
	HeaderTemplateSelector	Gets or sets a custom data template selection logic to render the menu header.
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HideMenuWhenActivePageItemNotFound	Gets or sets whether the menu is automatically hidden when the navigated page is not represented in the Main Menu by a navigation button.
	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsInitiallyCompact	Gets or sets whether the menu is initially displayed in the compact mode.
	IsMenuVisible	Gets or sets whether the menu is visible.
	IsMobileStatusBarVisible	Gets or sets whether the status bar for the window (app view) is shown.
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Items	Provides access to a collection of objects that represent Main Menu items.
	ItemsSource	Gets or sets an object that represents a source of items for the menu.
	ItemTemplate	Gets or sets the data template used to render each item from the data source.
	ItemTemplateSelector	Gets or sets a custom data template selection logic.
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinimizedFlyoutStateFrameThreshold	Gets or sets the window width, in pixels, at which the menu is automatically displayed in the Flyout state. This property supports the adaptive layout.
	MinWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MobileStatusBarBackground	Gets or sets the background color of the status bar. The alpha channel of the color is not used.
	MobileStatusBarForeground	Gets or sets the foreground color of the status bar. The alpha channel of the color is not used.
	Name	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
S	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Padding	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	PaddingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	SelectedItem	Gets or sets the menu button which is currently selected.
	ShowMenuOnEmptySpaceBarClick	Gets or sets whether the menu displayed in the compact mode can be expanded with a click on an empty space.
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	SyncWithActivePage	Gets or sets whether the button selection in the menu is automatically synchronized with the navigated page.
	TabIndex	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabIndexProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigation	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigationProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Tag	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Template	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseSystemFocusVisuals	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	UseSystemFocusVisualsProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VerticalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Width	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	WindowTitle	Gets or sets the window title.
	WindowTitleSettings	Gets or sets the window title settings, such as the background and foreground colors.

Public Methods

Public Fields

	Name	Description
S	AllowCustomizingWindowTitleProperty	Identifies the AllowCustomizingWindowTitle dependency property.
S	AvailableViewStatesProperty	Identifies the AvailableViewStates dependency property.
S	BottomBarItemsSourceProperty	Identifies the BottomBarItemsSource dependency property.

© 2018 Developer Express Inc.

S	BottomBarItemTemplateProperty	Identifies the BottomBarItemTemplate dependency property.
S	BottomBarItemTemplateSelectorProperty	Identifies the BottomBarItemTemplateSelector dependency property.
S	CompactOverlayStateFrameThresholdProperty	Identifies the CompactOverlayStateFrameThreshold dependency property.
S	CompactWidthProperty	Identifies the CompactWidth dependency property.
S	HeaderHeightProperty	Identifies the HeaderHeight dependency property.
S	HeaderPaddingProperty	Identifies the HeaderPadding dependency property.
S	HeaderProperty	Identifies the Header dependency property.
S	HeaderTemplateProperty	Identifies the HeaderTemplate dependency property.
S	HeaderTemplateSelectorProperty	Identifies the HeaderTemplateSelector dependency property.
	HideMenuOnUnselectedPage	Obsolete. Gets or sets whether the menu is automatically hidden when the navigated page is not represented in the menu by a navigation button.
S	HideMenuWhenActivePageItemNotFoundProperty	Identifies the HideMenuWhenActivePageItemNotFound dependency property.
S	IsInitiallyCompactProperty	Identifies the IsInitiallyCompact dependency property.
S	IsMenuVisibleProperty	Identifies the IsMenuVisible dependency property.
S	IsMobileStatusBarVisibleProperty	Identifies the IsMobileStatusBarVisible dependency property.
S	ItemsSourceProperty	Identifies the ItemsSource dependency property.
S	ItemTemplateProperty	Identifies the ItemTemplate dependency property.
S	ItemTemplateSelectorProperty	Identifies the ItemTemplateSelector dependency property.
S	MinimizedFlyoutStateFrameThresholdProperty	Identifies the MinimizedFlyoutStateFrameThreshold dependency property.
S	MobileStatusBarBackgroundProperty	Identifies the MobileStatusBarBackground dependency property.
S	MobileStatusBarForegroundProperty	Identifies the MobileStatusBarForeground dependency property.

© 2018 Developer Express Inc.

	SelectedItemProperty	Identifies the SelectedItem dependency property.
	ShowMenuOnEmptySpaceBarClickProperty	Identifies the ShowMenuOnEmptySpaceBarClick dependency property.
	SyncWithActivePageProperty	Identifies the SyncWithActivePage dependency property.
	WindowTitleProperty	Identifies the WindowTitle dependency property.
	WindowTitleSettingsProperty	Identifies the WindowTitleSettings dependency property.

Public Events

	Name	Description
	ContextMenuClosed	Occurs after the context menu has been closed.
	ContextMenuOpened	Occurs after the context menu has been opened.
	ContextMenuOpening	Occurs before the context menu is opened.
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)

HamburgerMenu Properties

Represents a collapsible navigation menu that displays a stack of navigation buttons. Supports regular buttons, sub-menus, hyperlinks, check and radio buttons.

The following tables list the members exposed by the HamburgerMenu type.

Public Constructors

	Name	Description
	HamburgerMenu	Initializes a new instance of the HamburgerMenu class with the default settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowCustomizingWindowTitle	Gets or sets whether it is allowed to customize the window title.
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AvailableViewStates	Gets or sets whether the menu can be displayed in the Flyout, Overlay and/or Inline state.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

		)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BottomBarItems	Provides access to a collection of objects that represent Bottom Bar items.
	BottomBarItemsSource	Gets or sets an object that represents a source of items for the menu's bottom bar.
	BottomBarItemTemplate	Gets or sets the data template used to render each item in the menu's bottom bar from the data source.
	BottomBarItemTemplateSelector	Gets or sets a custom data template selection logic for items in the menu's bottom bar.
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompactOverlayStateFrameThreshold	Gets or sets the window width, in pixels, at which the menu is automatically displayed in the Overlay state. This property supports the adaptive layout.
	CompactWidth	Gets or sets the menu pane width, in pixels, in its compact display mode.
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**

© 2018 Developer Express Inc.

		)
	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Header	Gets or sets the menu header displayed next to the hamburger button.
	HeaderHeight	Gets or sets the height of the menu header.
	HeaderPadding	Gets or sets the outer margin of the menu header.
	HeaderTemplate	Gets or sets the data template used to render the menu header.
	HeaderTemplateSelector	Gets or sets a custom data template selection logic to render the menu header.
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HideMenuWhenActivePageItemNotFound	Gets or sets whether the menu is automatically hidden when the navigated page is not represented in the Main Menu by a navigation button.
	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsInitiallyCompact	Gets or sets whether the menu is initially displayed in the compact mode.
	IsMenuVisible	Gets or sets whether the menu is visible.
	IsMobileStatusBarVisible	Gets or sets whether the status bar for the window (app view) is shown.
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

AllowCustomizingWindowTitle Property

Gets or sets whether it is allowed to customize the window title.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowCustomizingWindowTitle As Boolean
```

C#

```
public bool AllowCustomizingWindowTitle { get; set; }
```

Property Value

true, if it is allowed to customize the window title; otherwise, **false**.

AvailableViewStates Property

Gets or sets whether the menu can be displayed in the Flyout, Overlay and/or Inline state.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property AvailableViewStates As HamburgerMenuAvailableViewStates
```

C#

```
public HamburgerMenuAvailableViewStates AvailableViewStates { get; set; }
```

Property Value

A HamburgerMenuAvailableViewStates enumeration constant or their bitwise combination, that specifies the menu's available view states.

Remarks

The menu supports the adaptive layout, thus it automatically changes its view according to the window size. The **AvailableViewStates** property allows you to specify the view states in which the menu can be displayed. Using the **HamburgerMenuAvailableViewStates** enumeration, which supports combinations of its constants, you can enable only one, or any two, or all the provided states:

Value	Description
Flyout	The menu is hidden. With a click on the hamburger button, the menu is displayed in a fly-out overlaying the currently displayed page Overlay	The menu is displayed in the compact mode. With a click on the hamburger button, the menu is expanded overlaying the currently displayed page

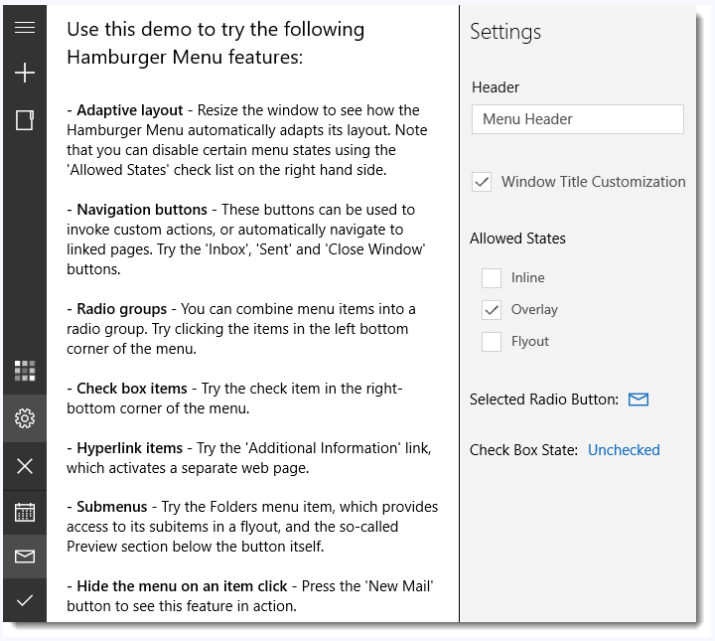
© 2018 Developer Express Inc.



Inline

The menu is displayed expanded inline with the current page. With a click on the hamburger button, the menu is displayed in the compact mode

BottomBarItems Property

Provides access to a collection of objects that represent Bottom Bar items.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property BottomBarItems As ObservableCollection(of IHamburgerMenuBottomBarItem)
```

C#

```
public ObservableCollection<IHamburgerMenuBottomBarItem> BottomBarItems { get; }
```

Property Value

The read-only collection of objects implementing the DevExpress.UI.Xaml.Layout.Internal.IHamburgerMenuItem interface that represent items contained within the menu.

Remarks

You can add the following objects to the collection.

- HamburgerMenuBottomBarNavigationButton
- HamburgerMenuBottomBarRadioButton
- HamburgerMenuBottomBarCheckBox

BottomBarItemsSource Property

Gets or sets an object that represents a source of items for the menu's bottom bar.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property BottomBarItemsSource As Object
```

C#

```
public object BottomBarItemsSource { get; set; }
```

Property Value

An object that represents a source of items for the menu's bottom bar.

Remarks

If your application is designed according to the MVVM pattern, use the **BottomBarItemsSource** property to specify the source of items, and the BottomBarItemTemplate or BottomBarItemTemplateSelector property to provide a template used to render the items.

BottomBarItemTemplate Property

Gets or sets the data template used to render each item in the menu's bottom bar from the data source.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property BottomBarItemTemplate As DataTemplate
```

C#

```
public DataTemplate BottomBarItemTemplate { get; set; }
```

Property Value

A **Windows.UI.Xaml.DataTemplate** object that specifies the visualization for the data objects.

Remarks

If your application is designed according to the MVVM pattern, use the BottomBarItemsSource property to specify the source of data for items in the menu's bottom bar, and the **BottomBarItemTemplate** or BottomBarItemTemplateSelector property to provide a data template used to visualize these data objects. If the data template is not specified, the string representation of the data objects is used.

BottomBarItemTemplateSelector Property

Gets or sets a custom data template selection logic for items in the menu's bottom bar.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property BottomBarItemTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector BottomBarItemTemplateSelector { get; set; }
```

Property Value

A **Windows.UI.Xaml.Controls.DataTemplateSelector** object that implements a custom data template selection logic. Typically this is a keyed resource, which you reference through a {StaticResource} markup extension.

Remarks

If your application is designed according to the MVVM pattern, use the BottomBarItemsSource property to specify the source of data for items in the menu's bottom bar, and the BottomBarItemTemplate or **BottomBarItemTemplateSelector** property to provide a data template used to visualize these data objects. If the data template is not specified, the string representation of the data objects is used.

CompactOverlayStateFrameThreshold Property

Gets or sets the window width, in pixels, at which the menu is automatically displayed in the Overlay state. This property supports the adaptive layout.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property CompactOverlayStateFrameThreshold As Double
```

C#

```
public Double CompactOverlayStateFrameThreshold { get; set; }
```

Property Value

A Double value that specifies the window width, in pixels, at which the menu is automatically displayed in the Overlay state. The default is **1024**.

Remarks

The HamburgerMenu supports the adaptive layout, thus it is displayed in the view state that corresponds to the window size. Using the AvailableViewStates property, you can specify the view states in which the menu can be displayed. The **CompactOverlayStateFrameThreshold** property specifies the window width, in pixels, at which the menu automatically turns into the Overlay state.

CompactWidth Property

Gets or sets the menu pane width, in pixels, in its compact display mode.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property CompactWidth As Double
```

C#

```
public Double CompactWidth { get; set; }
```

Property Value

A Double value that specifies the menu pane width, in pixels, in its compact display mode.

See Also

HamburgerMenu Class

Header Property

Gets or sets the menu header displayed next to the hamburger button.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Header As Object
```

C#

```
public object Header { get; set; }
```

Property Value

The menu header.

Remarks

Use the **Header** property to specify a data object representing the menu header displayed next to the hamburger button. To specify the data template used to render the data object, use the HeaderTemplate or HeaderTemplateSelector property. The HeaderPadding and HeaderHeight properties specify the outer margin and height of the header, respectively.

HeaderHeight Property

Gets or sets the height of the menu header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderHeight As Double
```

C#

```
public Double HeaderHeight { get; set; }
```

Property Value

A Double value that specifies the height of the menu header.

Remarks

You set the menu header with the Header property. The **HeaderHeight** property allows you to specify the header height.

HeaderPadding Property

Gets or sets the outer margin of the menu header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderPadding As Thickness
```

C#

```
public Thickness HeaderPadding { get; set; }
```

Property Value

A Thickness structure that specifies the outer margin of the menu header.

Remarks

You set the menu header with the Header property. The **HeaderPadding** property allows you to specify the outer margin of the menu header.

HeaderTemplate Property

Gets or sets the data template used to render the menu header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderTemplate As DataTemplate
```

C#

```
public DataTemplate HeaderTemplate { get; set; }
```

Property Value

A DataTemplate object that specifies the data template used to render the menu header.

Remarks

Set the menu header with the Header property. The **HeaderTemplate** and HeaderTemplateSelector properties allow you to specify how the data object is rendered. If no data template is specified, the string representation of the object is used.

HeaderTemplateSelector Property

Gets or sets a custom data template selection logic to render the menu header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector HeaderTemplateSelector { get; set; }
```

Property Value

A **Windows.UI.Xaml.Controls.DataTemplateSelector** object that implements a custom data template selection logic. Typically, this is a keyed resource, which you reference through a {StaticResource} markup extension.

Remarks

You set the menu header with the Header property. The HeaderTemplate and **HeaderTemplateSelector** properties allow you to specify how the data object is rendered. If no data template is specified, the string representation of the object is used.

HideMenuWhenActivePageItemNotFound Property

Gets or sets whether the menu is automatically hidden when the navigated page is not represented in the Main Menu by a navigation button.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HideMenuWhenActivePageItemNotFound As Boolean
```

C#

```
public bool HideMenuWhenActivePageItemNotFound { get; set; }
```

Property Value

true, if the menu is automatically hidden when the navigated page is not represented in the menu by a navigation button; otherwise, **false**. The default is **false**.

Remarks

If the SyncWithActivePage option is enabled, the button selection in the menu is automatically synchronized with the navigated page. If the navigated page is not represented in the Main Menu by a button, the menu can be automatically hidden. To enable this behavior, set the **HideMenuWhenActivePageItemNotFound** property to **true**.

IsInitiallyCompact Property

Gets or sets whether the menu is initially displayed in the compact mode.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IsInitiallyCompact As Boolean
```

C#

```
public bool IsInitiallyCompact { get; set; }
```

Property Value

true, if the menu is initially displayed in the compact mode; otherwise, **false**. The default is **false**.

IsMenuVisible Property

Gets or sets whether the menu is visible.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IsMenuVisible As Boolean
```

C#

```
public bool IsMenuVisible { get; set; }
```

Property Value

true, if the menu is visible; otherwise, **false**. The default is **true**.

Remarks

Use the **IsMenuVisible** property to specify whether the menu is visible.

The menu can be automatically hidden on item selection. For this purpose, set the required item's HamburgerMenuNavigationButton.HideMenuWhenSelected or HamburgerSubMenuNavigationButton.HideMenuWhenSelected property to **true**.

IsMobileStatusBarVisible Property

Gets or sets whether the status bar for the window (app view) is shown.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IsMobileStatusBarVisible As Boolean
```

C#

```
public bool IsMobileStatusBarVisible { get; set; }
```

Property Value

true, if the status bar for the window (app view) is shown; otherwise, **false**.

Items Property

Provides access to a collection of objects that represent Main Menu items.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Items As ObservableCollection(of IHamburgerMenuItem)
```

C#

```
public ObservableCollection<IHamburgerMenuItem> Items { get; }
```

Property Value

The read-only collection of objects implementing the DevExpress.UI.Xaml.Layout.Internal.IHamburgerMenuItem interface that represent items contained within the menu.

Remarks

You can add the following objects to the collection.

- HamburgerMenuNavigationButton
- HamburgerSubMenu
- HamburgerMenuHyperlinkButton

ItemsSource Property

Gets or sets an object that represents a source of items for the menu.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemsSource As Object
```

C#

```
public object ItemsSource { get; set; }
```

Property Value

An object that represents a source of items for the menu.

Remarks

If your application is designed according to the MVVM pattern, use the **ItemsSource** property to specify the source of items, and the ItemTemplate or ItemTemplateSelector property to provide a template used to render the items.

ItemTemplate Property

Gets or sets the data template used to render each item from the data source.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemTemplate As DataTemplate
```

C#

```
public DataTemplate ItemTemplate { get; set; }
```

Property Value

The **Windows.UI.Xaml.DataTemplate** object that specifies the visualization for the data objects.

Remarks

If your application is designed according to the MVVM pattern, use the ItemsSource property to specify the source of data, and the **ItemTemplate** or ItemTemplateSelector property to provide a data template used to visualize these data objects. If the data template is not specified, the string representation of the data objects is used.

ItemTemplateSelector Property

Gets or sets a custom data template selection logic.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ItemTemplateSelector { get; set; }
```

Property Value

A **Windows.UI.Xaml.Controls.DataTemplateSelector** object that implements a custom data template selection logic. Typically, this is a keyed resource, which you reference through a {StaticResource} markup extension.

Remarks

If your application is designed according to the MVVM pattern, use the ItemsSource property to specify the source of data, and the ItemTemplate or **ItemTemplateSelector** property to provide a data template used to visualize these data objects. If the data template is not specified, the string representation of the data objects is used.

MinimizedFlyoutStateFrameThreshold Property

Gets or sets the window width, in pixels, at which the menu is automatically displayed in the Flyout state. This property supports the adaptive layout.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property MinimizedFlyoutStateFrameThreshold As Double
```

C#

```
public Double MinimizedFlyoutStateFrameThreshold { get; set; }
```

Property Value

A Double value that specifies the window width, in pixels, at which the menu is automatically displayed in the Flyout state. The default is **720**.

Remarks

The HamburgerMenu supports the adaptive layout, thus it is displayed in the view state that corresponds to the window size. Using the AvailableViewStates property, you can specify the view states in which the menu can be displayed. The **MinimizedFlyoutStateFrameThreshold** property specifies the window width, in pixels, at which the menu automatically turns into the Flyout state.

MobileStatusBarBackground Property

Gets or sets the background color of the status bar. The alpha channel of the color is not used.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property MobileStatusBarBackground As SolidColorBrush
```

C#

```
public SolidColorBrush MobileStatusBarBackground { get; set; }
```

Property Value

The background color of the status bar.

IsMobileStatusBarVisible

© 2018 Developer Express Inc.

MobileStatusBarForeground Property

Gets or sets the foreground color of the status bar. The alpha channel of the color is not used.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property MobileStatusBarForeground As SolidColorBrush
```

C#

```
public SolidColorBrush MobileStatusBarForeground { get; set; }
```

Property Value

The foreground color of the status bar.

SelectedItem Property

Gets or sets the menu button which is currently selected.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedItem As Object
```

C#

```
public object SelectedItem { get; set; }
```

Property Value

The menu button which is currently selected.

ShowMenuOnEmptySpaceBarClick Property

Gets or sets whether the menu displayed in the compact mode can be expanded with a click on an empty space.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowMenuOnEmptySpaceBarClick As Boolean
```

C#

```
public bool ShowMenuOnEmptySpaceBarClick { get; set; }
```

Property Value

true, if the menu displayed in the compact mode can be expanded with a click on an empty space; otherwise, **false**. The default is **true**.

Remarks

By default, an end-user can expand the menu displayed in the compact mode with a click on the menu's empty space. Set **ShowMenuOnEmptySpaceBarClick** property to **false** to prevent this. If this feature is disabled, an end-user can still expand the menu with a click on the hamburger button.

SyncWithActivePage Property

Gets or sets whether the button selection in the menu is automatically synchronized with the navigated page.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SyncWithActivePage As Boolean
```

C#

```
public bool SyncWithActivePage { get; set; }
```

Property Value

true, if the button selection in the menu is automatically synchronized with the navigated page; otherwise, **false**. The default is **true**.

Remarks

The button currently selected in the menu (see SelectedItem) is automatically synchronized with the navigated page. This means that when an end-user navigates to a page, the corresponding button (the button that has the same navigation target page as the page being navigated) is automatically selected in the menu. If the menu does not contain the corresponding button, no button is selected. By default, this feature is enabled. Set the **SyncWithActivePage** property to **false** to disable this automatic synchronization.

To disable this feature for a particular button, use the HamburgerMenuNavigationButton.SyncWithActivePage or HamburgerSubMenuNavigationButton.SyncWithActivePage property.

The synchronization is performed based on the button's navigation target page and the page being navigated. The navigation parameters are not taken into account for the synchronization, by default. Enable the HamburgerMenuNavigationButton.UseNavigationTargetParameterForSync or HamburgerSubMenuNavigationButton.UseNavigationTargetParameterForSync option for the corresponding button to perform the automatic synchronization according to the button's navigation parameters.

WindowTitle Property

Gets or sets the window title.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property WindowTitle As String
```

C#

```
public string WindowTitle { get; set; }
```

Property Value

A String value that specifies the window title.

WindowTitleSettings Property

Gets or sets the window title settings, such as the background and foreground colors.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property WindowTitleSettings As TitleSettings
```

C#

```
public TitleSettings WindowTitleSettings { get; set; }
```

Property Value

The TitleSettings object that comprises the window title settings.

HamburgerMenu Events

Represents a collapsible navigation menu that displays a stack of navigation buttons. Supports regular buttons, sub-menus, hyperlinks, check and radio buttons.

The following tables list the members exposed by the HamburgerMenu type.

Public Events

	Name	Description
	ContextMenuClosed	Occurs after the context menu has been closed.
	ContextMenuOpened	Occurs after the context menu has been opened.
	ContextMenuOpening	Occurs before the context menu is opened.
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)

ContextMenuOpened Event

Occurs after the context menu has been opened.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
event Public ContextMenuOpened As EventHandler
```

C#

```
public event EventHandler ContextMenuOpened
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

ContextMenuOpening Event

Occurs before the context menu is opened.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
event Public ContextMenuOpening As EventHandler(of ContextMenuOpeningEventArgs)
```

C#

```
public event EventHandler<ContextMenuOpeningEventArgs> ContextMenuOpening
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.ContextMenuOpeningEventArgs containing data related to this event.

Remarks

The event's **Info** property returns an object that stores the menu settings.

HamburgerMenuAvailableViewStates Enumeration

Lists values that specify the available view states for the Hamburger Menu.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Enum HamburgerMenuAvailableViewStates
```
C#
```
public enum HamburgerMenuAvailableViewStates
```

Members

Name	Description
All	All three view states are enabled.
Flyout	The flyout view state is enabled.
Inline	The inline view state is enabled.
Overlay	The overlay view state is enabled.

Remarks

Values listed by this enumeration are used to set the HamburgerMenu.AvailableViewStates property's value.

See Also
DevExpress.UI.Xaml.Layout Namespace

© 2018 Developer Express Inc.

HamburgerMenuBottomBarCheckBox Class

Represents an icon-only button in the HamburgerMenu's Bottom Bar that an end-user can select (check) or clear (uncheck).

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class HamburgerMenuBottomBarCheckBox Inherits HamburgerMenuCheckBoxBase, IHamburgerMenuBottomBarItem,
  IVisualItem
```

C#

```
public class HamburgerMenuBottomBarCheckBox : HamburgerMenuCheckBoxBase, IHamburgerMenuBottomBarItem,
  IVisualItem
```

Remarks

The **HamburgerMenuBottomBarCheckBox** control represents a button in the bottom bar of the HamburgerMenu. To add a button to this bar, use the HamburgerMenu.BottomBarItems collection, or use HamburgerMenu.BottomBarItemsSource property to provide a source of buttons.

In the bottom bar, the button can be left or right aligned. To specify the button's alignment, use the Placement property. The **HamburgerMenuBottomBarCheckBox** is a selectable button and can be displayed in different states. To specify the button state, use its **IsChecked** property.

The **HamburgerMenuBottomBarCheckBox** only supports icons as its content. To specify the button's content, use the Icon property, or define the content between the opening and closing **HamburgerMenuBottomBarCheckBox** tags as shown below.

Xaml

```
<Layout:HamburgerMenuBottomBarCheckBox Placement="Right" IsChecked="{Binding IsCheckBoxChecked, Mode=TwoWa
    <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE008;"/>
</Layout:HamburgerMenuBottomBarCheckBox>
```

HamburgerMenuBottomBarCheckBox Constructor

Initializes a new instance of the HamburgerMenuBottomBarCheckBox class with the default settings.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public HamburgerMenuBottomBarCheckBox()
```

HamburgerMenuBottomBarCheckBox Properties

Represents an icon-only button in the HamburgerMenu's Bottom Bar that an end-user can select (check) or clear (uncheck).

The following tables list the members exposed by the HamburgerMenuBottomBarCheckBox type.

Public Constructors

	Name	Description
	HamburgerMenuBottomBarCheckBox	Initializes a new instance of the HamburgerMenuBottomBarCheckBox class with the default settings.

Public Properties

Icon Property

Gets or sets the button's icon.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Icon As IconElement
```

C#

```
public IconElement Icon { get; set; }
```

Property Value

An Windows.UI.Xaml.Controls.IconElement object that represents an icon UI element.

Remarks

The HamburgerMenuBottomBarCheckBox is an icon-only button. Use the **Icon** property to specify the button's icon. You can use the following objects to specify the icon:

- **Windows.UI.Xaml.Controls.BitmapIcon**,
- **Windows.UI.Xaml.Controls.FontIcon**,
- **Windows.UI.Xaml.Controls.PathIcon**,
- **Windows.UI.Xaml.Controls.SymbolIcon**.

This property is also the content property of the button, thus you can specify the icon in XAML between the button's opening and closing tags. See an example below.

C#

```
<Layout:HamburgerMenuBottomBarCheckBox Placement="Right" IsChecked="{Binding IsCheckBoxChecked, Mode=TwoWa
    <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE008;"/>
</Layout:HamburgerMenuBottomBarCheckBox>
```

Placement Property

Gets or sets whether the button is positioned at the left or right of the HamburgerMenu's bottom bar.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Placement As HamburgerMenuBottomBarNavigationButtonPlacement
```

C#

```
public HamburgerMenuBottomBarNavigationButtonPlacement Placement { get; set; }
```

Property Value

A HamburgerMenuBottomBarNavigationButtonPlacement enumeration constant that specifies the button position, such as **Left** or **Right**, in the HamburgerMenu's bottom bar. The default is **Left**.

Remarks

The HamburgerMenuBottomBarCheckBox can be left or right aligned in the HamburgerMenu's bottom bar. Use the **Placement** property to specify the button position in the bottom bar.

HamburgerMenuBottomBarNavigationButton Class

Represents a icon-only button in the Bottom Bar of the HamburgerMenu that navigates to the specified page with a click.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class HamburgerMenuBottomBarNavigationButton Inherits HamburgerMenuNavigationIconButton, IHamburgerMenuBo
  IVisualItem,
  IHamburgerMenuSupportCompactWidth,
  ISupportOwner(of HamburgerMenu)
```

C#

```
public class HamburgerMenuBottomBarNavigationButton : HamburgerMenuNavigationIconButton, IHamburgerMenuBottomBa
  IVisualItem,
  IHamburgerMenuSupportCompactWidth,
  ISupportOwner<HamburgerMenu>
```

Remarks

The **HamburgerMenuBottomBarNavigationButton** control represents a button in the bottom bar of the HamburgerMenu. To add a button to this bar, use the HamburgerMenu.BottomBarItems collection, or use HamburgerMenu.BottomBarItemsSource property to provide a source of buttons.

When an end-user clicks or taps the button, the application navigates to the associated target page. You specify the target page using the **NavigationTargetType** or **NavigationTargetTypeName** property. The **NavigationTargetParameter** property specifies the navigation parameter to pass to the target page.

In the bottom bar, the button can be left or right aligned. To specify the button's alignment, use the Placement property.

The **HamburgerMenuBottomBarNavigationButton** only supports icons as its content. To specify the button's content, use the Icon property, or define the content between the opening and closing **HamburgerMenuBottomBarNavigationButton** tags as shown below.

Xaml

```
<Layout:HamburgerMenuBottomBarNavigationButton Placement="Right" NavigationTargetTypeName="HomePage">
    <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE008;"/>
</Layout:HamburgerMenuBottomBarNavigationButton>
```

HamburgerMenuBottomBarNavigationButton Constructor

Initializes a new instance of the HamburgerMenuBottomBarNavigationButton class with the default settings.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public HamburgerMenuBottomBarNavigationButton()
```

HamburgerMenuBottomBarNavigationButton Properties

Represents a icon-only button in the Bottom Bar of the HamburgerMenu that navigates to the specified page with a click.

The following tables list the members exposed by the HamburgerMenuBottomBarNavigationButton type.

Public Constructors

	Name	Description
	HamburgerMenuBottomBarNavigationButton	Initializes a new instance of the HamburgerMenuBottomBarNavigationButton class with the default settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)

Icon Property

Gets or sets the icon displayed by the button.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Icon As IconElement
```

C#

```
public IconElement Icon { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.IconElement object that represents the icon displayed by the button.

Remarks

You can use the following objects to specify the icon:

- **Windows.UI.Xaml.Controls.BitmapIcon**,
- **Windows.UI.Xaml.Controls.FontIcon**,
- **Windows.UI.Xaml.Controls.PathIcon**,
- **Windows.UI.Xaml.Controls.SymbolIcon**.

Placement Property

Specifies the alignment of the button. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Property Placement As HamburgerMenuBottomBarNavigationButtonPlacement
```
C#
```
public HamburgerMenuBottomBarNavigationButtonPlacement Placement { get; set; }
```

Property Value

A HamburgerMenuBottomBarNavigationButtonPlacement enumeration value.

HamburgerMenuBottomBarNavigationButtonPlacement Enumeration

Lists values that specify a Bottom Bar navigation button's horizontal alignment.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Enum HamburgerMenuBottomBarNavigationButtonPlacement
```

C#

```
public enum HamburgerMenuBottomBarNavigationButtonPlacement
```

Members

Name	Description
Left	The button is aligned to the left.
Right	The button is aligned to the right.

Remarks

Values listed by this enumeration are used to set the values of the following properties:

- HamburgerMenuBottomBarCheckBox.Placement
- HamburgerMenuBottomBarNavigationButton.Placement
- HamburgerMenuBottomBarRadioButton.Placement

HamburgerMenuBottomBarRadioButton Class

Represents an icon-only button in the HamburgerMenu's Bottom Bar that allows an end-user to select an option from a group of options.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class HamburgerMenuBottomBarRadioButton Inherits HamburgerMenuRadioButtonBase, IHamburgerMenuBottomBarIte
  IVisualItem
```

C#

```
public class HamburgerMenuBottomBarRadioButton : HamburgerMenuRadioButtonBase, IHamburgerMenuBottomBarItem,
  IVisualItem
```

Remarks

The **HamburgerMenuBottomBarRadioButton** control represents a button in the bottom bar of the HamburgerMenu. To add a button to this bar, use the HamburgerMenu.BottomBarItems collection, or use HamburgerMenu.BottomBarItemsSource property to provide a source of data for the buttons.

The **HamburgerMenuBottomBarRadioButton** only supports icons as its content. To specify the button's content, use the Icon property, or define the content between the opening and closing HamburgerMenuBottomBarRadioButton tags as shown below.

Xaml

```
<Layout:HamburgerMenuBottomBarRadioButton GroupName="AppGroup" IsChecked="{Binding IsCalendarRadioButtonCl
    <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE787;" />
</Layout:HamburgerMenuBottomBarRadioButton>
```

The **HamburgerMenuBottomBarRadioButton** represents an option in a group of options. To specify the group to which a particular **HamburgerMenuBottomBarRadioButton** belongs, use its **GroupName** property. See an example below.

Xaml

```
<Layout:HamburgerMenuBottomBarRadioButton GroupName="AppGroup" IsChecked="{Binding IsCalendarRadioButtonCl
    <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE787;" />
</Layout:HamburgerMenuBottomBarRadioButton>
<Layout:HamburgerMenuBottomBarRadioButton GroupName="AppGroup" IsChecked="{Binding IsMailRadioButtonChecke
    <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE715;" />
</Layout:HamburgerMenuBottomBarRadioButton>
```

HamburgerMenuBottomBarRadioButton Constructor

Initializes a new instance of the HamburgerMenuBottomBarRadioButton class with the default settings.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public HamburgerMenuBottomBarRadioButton()
```

HamburgerMenuBottomBarRadioButton Properties

Represents an icon-only button in the HamburgerMenu's Bottom Bar that allows an end-user to select an option from a group of options.

The following tables list the members exposed by the HamburgerMenuBottomBarRadioButton type.

Public Constructors

	Name	Description
	HamburgerMenuBottomBarRadioButton	Initializes a new instance of the HamburgerMenuBottomBarRadioButton class with the default settings.

Icon Property

Gets or sets the button's icon.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Icon As IconElement
```

C#

```
public IconElement Icon { get; set; }
```

Property Value

An IconElement object that represents an icon UI element.

Remarks

The HamburgerMenuBottomBarRadioButton is an icon-only button. Use the **Icon** property to specify the button's icon. You can use the following objects to specify the icon:

- **Windows.UI.Xaml.Controls.BitmapIcon**,
- **Windows.UI.Xaml.Controls.FontIcon**,
- **Windows.UI.Xaml.Controls.PathIcon**,
- **Windows.UI.Xaml.Controls.SymbolIcon**.

This property is also the content property of the button, thus you can specify the icon in XAML between the button's opening and closing tags. See an example below.

C#

```
<Layout:HamburgerMenuBottomBarRadioButton GroupName="AppGroup" IsChecked="{Binding IsCalendarRadioButtonCl
    <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE787;" />
</Layout:HamburgerMenuBottomBarRadioButton>
<Layout:HamburgerMenuBottomBarRadioButton GroupName="AppGroup" IsChecked="{Binding IsMailRadioButtonCheck
    <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE715;" />
</Layout:HamburgerMenuBottomBarRadioButton>
```

HamburgerMenuBottomBarRadioButton Class
HamburgerMenuBottomBarRadioButton Members
DevExpress.UI.Xaml.Layout Namespace

© 2018 Developer Express Inc.

Placement Property

Gets or sets whether the button is positioned at the left or right of the HamburgerMenu's bottom bar.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Placement As HamburgerMenuBottomBarNavigationButtonPlacement
```

C#

```
public HamburgerMenuBottomBarNavigationButtonPlacement Placement { get; set; }
```

Property Value

A HamburgerMenuBottomBarNavigationButtonPlacement enumeration constant that specifies the button position, such as **Left** or **Right**, in the HamburgerMenu's bottom bar. The default is **Left**.

Remarks

The HamburgerMenuBottomBarRadioButton can be left or right aligned in the HamburgerMenu's bottom bar. Use the **Placement** property to specify the button position in the bottom bar.

HamburgerMenuFrame Class

Represents a frame with two views; one view to display navigation commands using the built-in HamburgerMenu, and another view to display the navigated pages.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class HamburgerMenuFrame Inherits MenuFrameBase(of HamburgerMenu), IHamburgerMenuStateSupportInternal
```

C#

```
public class HamburgerMenuFrame : MenuFrameBase<HamburgerMenu>, IHamburgerMenuStateSupportInternal
```

Remarks

HamburgerMenuFrame Members

Represents a frame with two views; one view to display navigation commands using the built-in HamburgerMenu, and another view to display the navigated pages.

The following tables list the members exposed by the HamburgerMenuFrame type.

Public Constructors

	Name	Description
	HamburgerMenuFrame	Overloaded. Initializes a new instance of the HamburgerMenuFrame class with the specified settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowCustomizingWindowTitle	Gets or sets whether it is allowed to customize the window title. This is a dependency property. (Inherited from **DXFrame**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
