HamburgerMenuFrame Constructor

Initializes a new instance of the HamburgerMenuFrame class with the default settings.

Overload List

Name	Description
HamburgerMenuFrame()	Initializes a new instance of the HamburgerMenuFrame class with the default settings.
HamburgerMenuFrame(Type hamburgerMenuPageType)	Initializes a new instance of the HamburgerMenuFrame class with the specified settings.

HamburgerMenuFrame Constructor

Initializes a new instance of the HamburgerMenuFrame class with the default settings.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public HamburgerMenuFrame()
```

HamburgerMenuFrame Constructor (Type)

Initializes a new instance of the HamburgerMenuFrame class with the specified settings.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public New(
   ByVal hamburgerMenuPageType As Type
)
```

C#

```
public HamburgerMenuFrame(
   Type hamburgerMenuPageType
)
```

Parameters

hamburgerMenuPageType
The page representing the menu specified as a type reference to its partial class type.

Remarks

The specified page must be a **Windows.UI.Xaml.Controls.Page** descendant and contain a HamburgerMenu as a child.

HamburgerMenuHyperlinkButton Class

Represents a button in the HamburgerMenu that functions as a hyperlink.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class HamburgerMenuHyperlinkButton Inherits HyperlinkButton, IHamburgerMenuItem,
  ISplitCollectionItem,
  IVisualItem
```

C#

```
public class HamburgerMenuHyperlinkButton : HyperlinkButton, IHamburgerMenuItem,
  ISplitCollectionItem,
  IVisualItem
```

Remarks

The **HamburgerMenuHyperlinkButton** control is a button in the HamburgerMenu that appears as an underlined text and acts as a hyperlink. Use the HamburgerMenu.Items collection to add the **HamburgerMenuHyperlinkButton** to the HamburgerMenu.

To specify the URI to which the button navigates, use the **NavigateUri** property. When an end-user clicks the link, the default browser navigates to the specified URI. You can also handle the **Click** event to perform custom actions with a button click.

The markup below shows a sample hyperlink button.

Xaml

```
<Layout:HamburgerMenuHyperlinkButton Content="Additional Information" NavigateUri="https://documentation.d
```

Placement Property

Gets or sets whether the button is positioned at the top or bottom of the menu.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Placement As HamburgerMenuNavigationButtonPlacement
```

C#

```
public HamburgerMenuNavigationButtonPlacement Placement { get; set; }
```

Property Value

A HamburgerMenuNavigationButtonPlacement enumeration constant, such as **Top** or **Bottom**, that specifies how the button is positioned in the menu. The default is **Bottom**.

Remarks

The HamburgerMenuHyperlinkButton can be top or bottom aligned in the HamburgerMenu. Use the **Placement** property to specify the button position in the menu.

HamburgerMenuNavigationButton Class

Represents a button with an icon in the Main Menu of the HamburgerMenu that navigates to the specified page with a click.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class HamburgerMenuNavigationButton Inherits HamburgerMenuSelectableNavigationIconButton, IHamburgerMenuI
  ISplitCollectionItem,
  IVisualItem,
  IHamburgerMenuNavigationItem,
  ISelectableHamburgerMenuItem,
  ISelectable,
  INavigationItem,
  IItemsSourceControllerItem,
  IHamburgerMenuSupportCompactWidth,
  ISupportOwner(of HamburgerMenu),
  IColorSchemeEditorSupport
```

C#

```
public class HamburgerMenuNavigationButton : HamburgerMenuSelectableNavigationIconButton, IHamburgerMenuItem,
  ISplitCollectionItem,
  IVisualItem,
  IHamburgerMenuNavigationItem,
  ISelectableHamburgerMenuItem,
  ISelectable,
  INavigationItem,
  IItemsSourceControllerItem,
  IHamburgerMenuSupportCompactWidth,
  ISupportOwner<HamburgerMenu>,
  IColorSchemeEditorSupport
```

Remarks

The **HamburgerMenuNavigationButton** represents a button in the HamburgerMenu. To add a button to the HamburgerMenu, use the menu's HamburgerMenu.Items collection, or declare buttons between the HamburgerMenu's opening and closing tags.

When an end-user clicks or taps the button, the application navigates to the associated target page. You specify the target page using the **NavigationTargetType** or **NavigationTargetTypeName** property. The **NavigationTargetParameter** property specifies the navigation parameter to pass to the target page.

The **HamburgerMenuNavigationButton** is a content control. Typically, you specify a string caption using the button's **Content** property. However, you can use custom objects to specify the button content, and make use of the **ContentTemplate** property to visualize the content.

In addition to the content, the **HamburgerMenuNavigationButton** supports icons, which can be specified with the **Icon** property. The code below shows how to declare buttons in XAML.

Xaml

```
xmlns:local="using:HamburgerMenuDemo"
xmlns:Layout="using:DevExpress.UI.Xaml.Layout"
 <Layout:HamburgerMenu.Items>
     <!-- The page to which the button navigates to is specified with the NavigationTargetType property --
     <Layout:HamburgerMenuNavigationButton Content="New Mail" NavigationTargetType="local:HamburgerMenuDer
         <Layout:HamburgerMenuNavigationButton.Icon>
             <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE710;" />
         </Layout:HamburgerMenuNavigationButton.Icon>
     </Layout:HamburgerMenuNavigationButton>
     <!-- The page to which the button navigates to is specified with the NavigationTargetTypeName propert
     <Layout:HamburgerMenuNavigationButton Content="Home" IsSelected="True" NavigationTargetTypeName="Home
         <Layout:HamburgerMenuNavigationButton.Icon>
             <SymbolIcon Symbol="Home"/>
         </Layout:HamburgerMenuNavigationButton.Icon>
     </Layout:HamburgerMenuNavigationButton>
 </Layout:HamburgerMenu.Items>
```

HamburgerMenuNavigationButton Constructor

Initializes a new instance of the HamburgerMenuNavigationButton class with the default settings.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public HamburgerMenuNavigationButton()
```

HamburgerMenuNavigationButton Properties

Represents a button with an icon in the Main Menu of the HamburgerMenu that navigates to the specified page with a click.

The following tables list the members exposed by the HamburgerMenuNavigationButton type.

Public Constructors

	Name	Description
	HamburgerMenuNavigationButton	Initializes a new instance of the HamburgerMenuNavigationButton class with the default settings.

Public Properties

	Name	Description

ContextMenu Property

Gets or sets the context menu that is invoked when the end-user right-clicks the navigation button. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ContextMenu As Object
```

C#

```
public object ContextMenu { get; set; }
```

Property Value

The UI element invoked when the end-user right-clicks the navigation button.

HideMenuWhenSelected Property

Gets or sets whether the HamburgerMenu is automatically hidden when the current item is selected.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HideMenuWhenSelected As Boolean
```

C#

```
public bool HideMenuWhenSelected { get; set; }
```

Property Value

true, if the HamburgerMenu is automatically hidden when the current item is selected; otherwise, **false**. The default is **false**.

Remarks

Enable the **HideMenuWhenSelected** option to automatically hide the HamburgerMenu when the current item is selected.

Placement Property

Gets or sets whether the button is positioned at the top or bottom of the HamburgerMenu.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Placement As HamburgerMenuNavigationButtonPlacement
```

C#

```
public HamburgerMenuNavigationButtonPlacement Placement { get; set; }
```

Property Value

A HamburgerMenuNavigationButtonPlacement enumeration constant, such as **Top** or **Bottom**, that specifies how the button is positioned in the menu. The default is **Top**.

Remarks

The HamburgerMenuNavigationButton can be top or bottom aligned in the HamburgerMenu. Use the **Placement** property to specify the button position in the menu.

RightContent Property

Gets or sets the additional button content displayed to the right of the main content.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property RightContent As Object
```

C#

```
public object RightContent { get; set; }
```

Property Value

The additional button content.

Remarks

Use the HamburgerMenuNavigationButton's **Content** property to specify the button content, and the **ContentTemlate** property to provide a data template used to render the data object. The **RightContent** property allows you to specify additional content displayed to the right of the main content. For instance, if a given button opens a folder in the mail box, you can use this property to indicate to the end-user the number of unread messages in the folder. Use the RightContentTemplate property to specify a data template used to render the data object. If the data template is not specified, the string representation of the object is used. The RightContentMargin property sets the outer margin of the content.

RightContentMargin Property

Gets or sets the outer margin of the additional content displayed to the right of the main content.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property RightContentMargin As Thickness
```

C#

```
public Thickness RightContentMargin { get; set; }
```

Property Value

A Thickness structure that specifies the outer margin of the additional content displayed to the right of the main content.

Remarks

Use the **RightContentMargin** property to specify the outer margin of the RightContent.

RightContentTemplate Property

Gets or sets the data template used to render the additional content displayed to the right of the main content.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property RightContentTemplate As DataTemplate
```

C#

```
public DataTemplate RightContentTemplate { get; set; }
```

Property Value

A DataTemplate object used to render the content.

Remarks

Use the RightContent property to specify a data object for the additional button content. The **RightContentTemplate** property allows you to provide a data template used to render the data object. If no data template is specified, the string representation of the object is used.

SelectOnClick Property

Gets or sets whether the current button is selected with a click.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectOnClick As Boolean
```

C#

```
public bool SelectOnClick { get; set; }
```

Property Value

true, if the current button is selected when clicked; otherwise, **false**. The default is **true**.

Remarks

Typically, the HamburgerMenuNavigationButton is used to navigate to a particular page in the application. To specify the page to which the current button navigates with a click, use its **NavigationTargetType** or **NavigationTargetTypeName** property. By default, when the button is clicked, it is selected and persists in the pushed state, indicating the currently selected page. You can get the currently selected button using the menu's HamburgerMenu.SelectedItem property.

However, instead of navigating to an application page, you can perform custom actions with a click on the button. For this purpose, handle the button's **Click** event, or use the **Command** property. In this use case, to prevent the button from being selected and persisting in the pushed state after it is clicked, set the **SelectOnClick** property to **false**. See an example below.

C#

```
<Layout:HamburgerMenuNavigationButton Content="Close Window" Placement="Bottom" SelectOnClick="False" Comm
    <Layout:HamburgerMenuNavigationButton.Icon>
        <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE711;" />
    </Layout:HamburgerMenuNavigationButton.Icon>
</Layout:HamburgerMenuNavigationButton>
```

SyncWithActivePage Property

Gets or sets whether the current button is automatically selected if the button's target page has been navigated.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SyncWithActivePage As Boolean
```

C#

```
public bool SyncWithActivePage { get; set; }
```

Property Value

true, if the current button is automatically selected if the button's target page has been navigated; otherwise, **false**. The default is **true**.

Remarks

If the HamburgerMenu.SyncWithActivePage option is enabled, the button selection in the menu is automatically synchronized with the navigated page. Set the **SyncWithActivePage** property to **false** to disable this feature for the current button.

HamburgerMenuNavigationButton Class
HamburgerMenuNavigationButton Members
DevExpress.UI.Xaml.Layout Namespace
HamburgerMenu.SyncWithActivePage
UseNavigationTargetParameterForSync

© 2018 Developer Express Inc.

UseNavigationTargetParameterForSync Property

Gets or sets whether to use current button's navigation parameters to synchronize the button selection in the menu with the navigated page.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property UseNavigationTargetParameterForSync As Boolean
```

C#

```
public bool UseNavigationTargetParameterForSync { get; set; }
```

Property Value

true, to use current button's navigation parameters to synchronize the button selection in the menu with the navigated page; otherwise, **false**. The default is **false**.

Remarks

If the HamburgerMenu.SyncWithActivePage option is enabled, the button selection in the menu is automatically synchronized with the navigated page. By default, this synchronization is performed based on the button's navigation target page and the page being navigated. The navigation parameters are not taken into account for the synchronization, by default. Enable the **UseNavigationTargetParameterForSync** option for the current button to perform the automatic synchronization according to the button's navigation parameters.

HamburgerMenuNavigationButtonPlacement Enumeration

Lists values that specify a navigation button's vertical alignment.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Enum HamburgerMenuNavigationButtonPlacement
```

C#

```
public enum HamburgerMenuNavigationButtonPlacement
```

Members

Name	Description
Bottom	The button is aligned to the bottom of the menu.
Top	The button is aligned to the top of the menu.

Remarks

Values listed by this enumeration are used to set the values of the following properties:

- HamburgerMenuNavigationButton.Placement
- HamburgerMenuHyperlinkButton.Placement
- HamburgerSubMenu.Placement

HamburgerSubMenu Class

Represents a button with an icon in the HamburgerMenu that provides access to a Sub Menu.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class HamburgerSubMenu Inherits HamburgerMenuIconButton, IHamburgerMenuItem,
  ISplitCollectionItem,
  IVisualItem,
  IHamburgerMenuSupportCompactWidth,
  IHamburgerMenuSelectableItemsContainer,
  IItemsSourceControllerItem,
  ISupportPageHeader,
  ISupportOwner(of HamburgerMenu)
```

C#

```
public class HamburgerSubMenu : HamburgerMenuIconButton, IHamburgerMenuItem,
  ISplitCollectionItem,
  IVisualItem,
  IHamburgerMenuSupportCompactWidth,
  IHamburgerMenuSelectableItemsContainer,
  IItemsSourceControllerItem,
  ISupportPageHeader,
  ISupportOwner<HamburgerMenu>
```

Remarks

The **HamburgerSubMenu** control is a button in the HamburgerMenu that invokes a flyout panel with a click. Use the HamburgerMenu.Items collection to add the **HamburgerSubMenu** to the HamburgerMenu.

The flyout panel displays items of the sub menu. To specify the collection of sub-menu items, use the Items property.

You can display sub menu items in a preview directly in the main menu below the sub menu button. To add a sub menu item to the preview, set its HamburgerSubMenuNavigationButton.ShowInPreview property to **true**.

The markup below shows a sample sub-menu.

Xaml

```
<Layout:HamburgerSubMenu Content="Folders">
    <Layout:HamburgerSubMenu.Icon>
        <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE8B7;" />
    </Layout:HamburgerSubMenu.Icon>
    <Layout:HamburgerSubMenu.Items>
        <Layout:HamburgerSubMenuNavigationButton Content="Outbox" RightContent="12" NavigationTargetType="
        <Layout:HamburgerSubMenuNavigationButton Content="Inbox" RightContent="142" ShowInPreview="True" N
        <Layout:HamburgerSubMenuNavigationButton Content="Drafts" RightContent="2" ShowInPreview="True" Na
        <Layout:HamburgerSubMenuNavigationButton Content="Junk" NavigationTargetType="local:HamburgerMenuI
        <Layout:HamburgerSubMenuNavigationButton Content="Sent" RightContent="452" ShowInPreview="True" Pa
        <Layout:HamburgerSubMenuNavigationButton Content="Trash" RightContent="15" NavigationTargetType="l
    </Layout:HamburgerSubMenu.Items>
</Layout:HamburgerSubMenu>
```

	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Icon	Gets or sets the icon displayed by the button. This is a dependency property. (Inherited from **HamburgerMenuIconButton**)
	IconFill	Specifies the icon color. This is a dependency property. (Inherited from **HamburgerMenuIconButton**)
	IconHeight	Gets or sets the icon's height. This is a dependency property. (Inherited from **HamburgerMenuIconButton**)
	IconSizeUnit	Specifies whether the icon size is set in pixels or points. This is a dependency property. (Inherited from **HamburgerMenuIconButton**)
	IconSource	Gets or sets the source of the icon. This is a dependency property (Inherited from **HamburgerMenuIconButton**)
	IconStretch	Gets or sets the stretch mode for the icon. This is a dependency property. (Inherited from **HamburgerMenuIconButton**)
	IconTemplate	Specifies the icon template. This is a dependency property. (Inherited from **HamburgerMenuIconButton**)

© 2018 Developer Express Inc.

	IconWidth	Gets or sets the icon's width. This is a dependency property. (Inherited from **HamburgerMenuIconButton**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsPointerOver	(Inherited from **Windows.UI.Xaml.Controls.Primitives.ButtonBase**)
S	IsPointerOverProperty	(Inherited from **Windows.UI.Xaml.Controls.Primitives.ButtonBase**)

	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsStandaloneSelectionItemMode	Gets or sets whether selecting an item in the current sub-menu discards the selection in the main menu, or the item selection in the current sub-menu and the main menu are independent.
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Items	Provides access to a collection of objects that represent sub-menu items.
	ItemsSource	Gets or sets an object that represents a source of items for the sub-menu.
	ItemTemplate	Gets or sets the data template used to render each item from the data source.
	ItemTemplateSelector	Gets or sets a custom data template selection logic.
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MoreButtonVisibilityMode	Gets or sets whether the More predefined button, which invokes a fly-out panel containing all sub-menu items, is displayed below the sub-menu items shown in preview.
	Name	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Padding	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	PaddingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	Placement	Gets or sets whether the sub-menu button is positioned at the top or bottom of the HamburgerMenu.
S	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)

ActualFlyoutPaneMinWidth Property

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public ReadOnly Property ActualFlyoutPaneMinWidth As Double
```
C#
```
public Double ActualFlyoutPaneMinWidth { get; }
```

Property Value

FlyoutHeader Property

Gets or sets the header of the sub-menu's fly-out panel.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property FlyoutHeader As Object
```

C#

```
public object FlyoutHeader { get; set; }
```

Property Value

The header of the sub-menu's fly-out panel.

Remarks

Use the **FlyoutHeader**, FlyoutHeaderHeight and FlyoutHeaderPadding properties to customize the header of the fly-out panel invoked with a click on the current sub-menu button.

FlyoutHeaderHeight Property

Gets or sets the height, in pixels, of the fly-out panel header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property FlyoutHeaderHeight As Double
```

C#

```
public Double FlyoutHeaderHeight { get; set; }
```

Property Value

A Double value that specifies the height, in pixels, of the fly-out panel header.

Remarks

Use the FlyoutHeader, **FlyoutHeaderHeight** and FlyoutHeaderPadding properties to specify the header of the fly-out panel invoked with a click on the current sub-menu button, and its attributes.

FlyoutHeaderPadding Property

Gets or sets the amount of space around the fly-out panel header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property FlyoutHeaderPadding As Thickness
```

C#

```
public Thickness FlyoutHeaderPadding { get; set; }
```

Property Value

A Thickness structure that specifies the amount of space around the fly-out panel header.

Remarks

Use the FlyoutHeader, FlyoutHeaderHeight and **FlyoutHeaderPadding** properties to specify the header of the fly-out panel invoked with a click on the current sub-menu button, and its attributes.

IsStandaloneSelectionItemMode Property

Gets or sets whether selecting an item in the current sub-menu discards the selection in the main menu, or the item selection in the current sub-menu and the main menu are independent.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IsStandaloneSelectionItemMode As Boolean
```

C#

```
public bool IsStandaloneSelectionItemMode { get; set; }
```

Property Value

true, if the selection in the current sub-menu and the main menu are independent; otherwise, **false**. The default is **false**.

Remarks

By default, when an item is selected in the current sub-menu, the item previously selected in the main menu (see HamburgerMenu.SelectedItem) is automatically deselected. Set the **IsStandaloneSelectionItemMode** property to **true** to enable independent selection for the main menu and current sub-menu. If this option is enabled, selecting an item in the current sub-menu does not discard the selection in the main menu. To get the item selected in the current sub-menu, read the SelectedItem property. To get the item selected in the main menu, read the HamburgerMenu.SelectedItem property.

Items Property

Provides access to a collection of objects that represent sub-menu items.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Items As ObservableCollection(of IHamburgerSubMenuItem)
```

C#

```
public ObservableCollection<IHamburgerSubMenuItem> Items { get; }
```

Property Value

The read-only collection of objects implementing the DevExpress.UI.Xaml.Layout.Internal.IHamburgerMenuItem interface that represent items contained within the sub-menu.

Remarks

The **Items** collection accepts HamburgerSubMenuNavigationButton objects.

ItemsSource Property

Gets or sets an object that represents a source of items for the sub-menu.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemsSource As Object
```

C#

```
public object ItemsSource { get; set; }
```

Property Value

An object that represents a source of items for the sub-menu.

Remarks

If your application is designed according to the MVVM pattern, use the **ItemsSource** property to specify the source of items, and the ItemTemplate or ItemTemplateSelector property to provide a template used to render the items.

ItemTemplate Property

Gets or sets the data template used to render each item from the data source.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemTemplate As DataTemplate
```

C#

```
public DataTemplate ItemTemplate { get; set; }
```

Property Value

The **Windows.UI.Xaml.DataTemplate** object that specifies the visualization for the data objects.

Remarks

If your application is designed according to the MVVM pattern, use the ItemsSource property to specify the source of data, and the **ItemTemplate** or ItemTemplateSelector property to provide a data template used to visualize these data objects. If the data template is not specified, the string representation of the data objects is used.

ItemTemplateSelector Property

Gets or sets a custom data template selection logic.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ItemTemplateSelector { get; set; }
```

Property Value

A **Windows.UI.Xaml.Controls.DataTemplateSelector** object that implements a custom data template selection logic. Typically, this is a keyed resource, which you reference through a {StaticResource} markup extension.

Remarks

If your application is designed according to the MVVM pattern, use the ItemsSource property to specify the source of data, and the ItemTemplate or **ItemTemplateSelector** property to provide a data template used to visualize these data objects. If the data template is not specified, the string representation of the data objects is used.

MoreButtonVisibilityMode Property

Gets or sets whether the More predefined button, which invokes a fly-out panel containing all sub-menu items, is displayed below the sub-menu items shown in preview.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property MoreButtonVisibilityMode As HamburgerSubMenuMoreButtonVisibility
```

C#

```
public HamburgerSubMenuMoreButtonVisibility MoreButtonVisibilityMode { get; set; }
```

Property Value

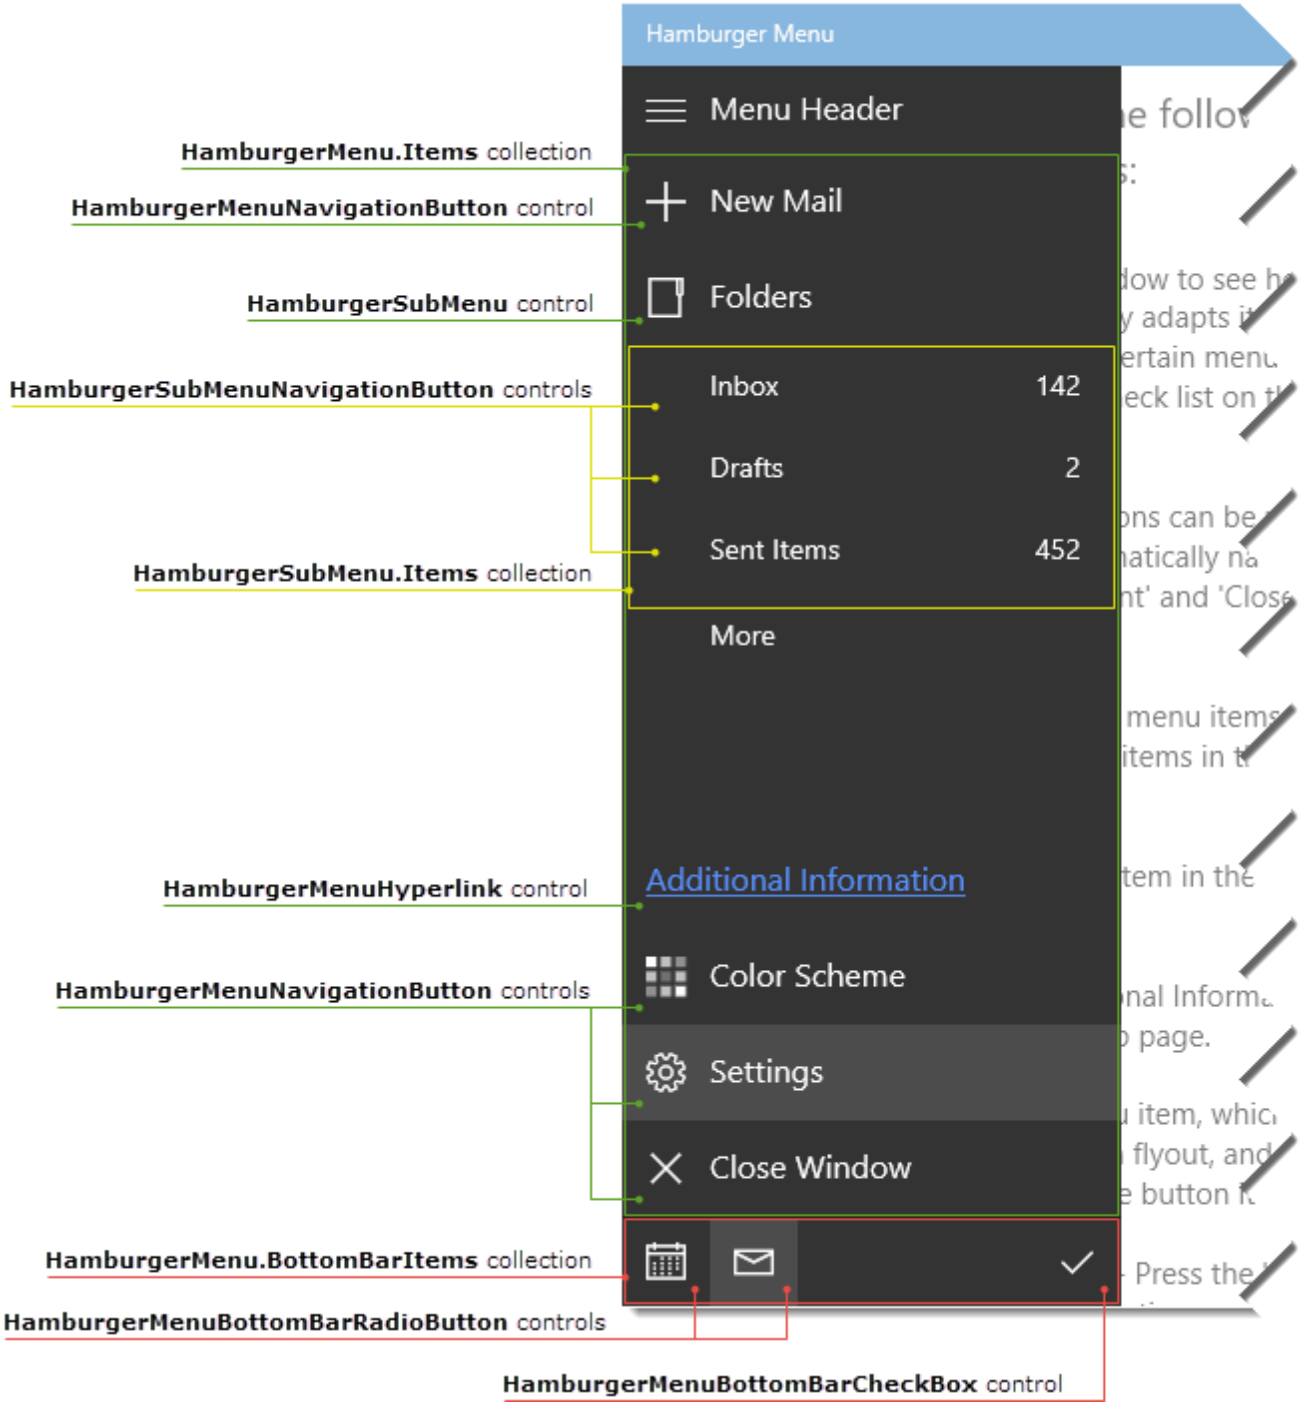
A HamburgerSubMenuMoreButtonVisibility enumeration value that specifies whether the More predefined button is displayed. The default is **Auto**.

Remarks

The Items property specifies the collection of sub-menu items. When an end-user clicks on a sub-menu, a fly-out panel containing sub-menu items appears. However, a particular sub-menu item can also be displayed directly in the main menu below the sub-menu button. To enable this behavior for a particular item, set its HamburgerSubMenuNavigationButton.ShowInPreview property to **true**.

It the figure below, the *Inbox*, *Drafts* and *Sent* items of the *Folders* sub-menu are shown in preview.

© 2018 Developer Express Inc.



Below is a markup that corresponds the sub-menu in the figure.

C#

```
xmlns:Layout="using:DevExpress.UI.Xaml.Layout"
<Layout:HamburgerSubMenu.Items>
    <Layout:HamburgerSubMenuNavigationButton Content="Outbox" RightContent="12" NavigationTargetType="loca
    <Layout:HamburgerSubMenuNavigationButton Content="Inbox" RightContent="142" ShowInPreview="True" Navig
    <Layout:HamburgerSubMenuNavigationButton Content="Drafts" RightContent="2" ShowInPreview="True" Naviga
    <Layout:HamburgerSubMenuNavigationButton Content="Junk" NavigationTargetType="local:HamburgerMenuDemo_
    <Layout:HamburgerSubMenuNavigationButton Content="Sent" RightContent="452" ShowInPreview="True" Previe
    <Layout:HamburgerSubMenuNavigationButton Content="Trash" RightContent="15" NavigationTargetType="local
</Layout:HamburgerSubMenu.Items>
```

By default, the **MoreButtonVisibilityMode** property is set to **Auto**. In this mode, the More predefined button is automatically displayed if not all items are shown in the preview. With a click on this button, a sub-menu fly-out panel that contain all sub-menu items opens.

© 2018 Developer Express Inc.

Set this property to **Hidden** or **Visible** to explicitly specify the More button's visibility.

Placement Property

Gets or sets whether the sub-menu button is positioned at the top or bottom of the HamburgerMenu.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Placement As HamburgerMenuNavigationButtonPlacement
```

C#

```
public HamburgerMenuNavigationButtonPlacement Placement { get; set; }
```

Property Value

A HamburgerMenuNavigationButtonPlacement enumeration constant, such as **Top** or **Bottom**, that specifies how the button is positioned in the menu. The default is **Top**.

Remarks

The HamburgerSubMenu button can be top or bottom aligned in the HamburgerMenu. Use the **Placement** property to specify the sub-menu button position in the menu.

SelectedItem Property

Gets or sets the item that is selected in the current sub-menu.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedItem As Object
```

C#

```
public object SelectedItem { get; set; }
```

Property Value

The item that is currently selected in the current sub-menu.

Remarks

The **SelectedItem** property specifies the item that is currently selected in the current sub-menu. To get or set whether a particular item is selected, use the HamburgerSubMenuNavigationButton.IsSelected property.

If the IsStandaloneSelectionItemMode property is set to **true**, selecting an item in the current sub-menu does not discard the selection in the main menu. If this feature is enabled, use the HamburgerMenu.SelectedItem and **SelectedItem** properties to get the item selected in the main menu and the current sub-menu, respectively.

AfterContainerInfoAdded Method

This method supports the internal infrastructure and is not intended to be used directly from your code.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Sub AfterContainerInfoAdded(
   ByVal containerInfo As ItemsSourceControllerContainerInfo
)
```

C#

```
public void AfterContainerInfoAdded(
   ItemsSourceControllerContainerInfo containerInfo
)
```

Parameters

containerInfo

HamburgerSubMenuNavigationButton Class

Represents a button with an icon in the HamburgerMenu's sub-menu.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class HamburgerSubMenuNavigationButton Inherits NavigationButton, IHamburgerSubMenuItem,
  IVisualItem,
  ISupportOwner(of HamburgerSubMenu),
  IHamburgerMenuNavigationItem,
  ISelectableHamburgerMenuItem,
  ISelectable,
  INavigationItem,
  IItemsSourceControllerItem
```

C#

```
public class HamburgerSubMenuNavigationButton : NavigationButton, IHamburgerSubMenuItem,
  IVisualItem,
  ISupportOwner<HamburgerSubMenu>,
  IHamburgerMenuNavigationItem,
  ISelectableHamburgerMenuItem,
  ISelectable,
  INavigationItem,
  IItemsSourceControllerItem
```

Remarks

You add buttons to the HamburgerMenu's sub-menu using the HamburgerSubMenu.Items collection.

The sub-menu items are displayed in a fly-out panel that is invoked with a click on the sub-menu button. You can also display the current sub-menu item directly in the HamburgerMenu below the sub-menu button in a preview. To do this, set the ShowInPreview property to **true**.

HamburgerSubMenuNavigationButton Constructor

Initializes a new instance of the HamburgerSubMenuNavigationButton class with the default settings.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public HamburgerSubMenuNavigationButton()
```

HamburgerSubMenuNavigationButton Properties

Represents a button with an icon in the HamburgerMenu's sub-menu.

The following tables list the members exposed by the HamburgerSubMenuNavigationButton type.

Public Constructors

	Name	Description
	HamburgerSubMenuNavigationButton	Initializes a new instance of the HamburgerSubMenuNavigationButton class with the default settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

ContextMenu Property

Gets or sets the context menu that is invoked when the end-user right-clicks the navigation button.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ContextMenu As Object
```

C#

```
public object ContextMenu { get; set; }
```

Property Value

The UI element invoked when the end-user right-clicks the navigation button.

Remarks

The PreviewContextMenu specifies the context menu for the item shown in the Sub Menu preview.

HideMenuWhenSelected Property

Gets or sets whether the HamburgerMenu is automatically hidden when the current item is selected.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HideMenuWhenSelected As Boolean
```

C#

```
public bool HideMenuWhenSelected { get; set; }
```

Property Value

true, if the HamburgerMenu is automatically hidden when the current item is selected; otherwise, **false**. The default is **false**.

Remarks

Enable the **HideMenuWhenSelected** option to automatically hide the HamburgerMenu when the current item is selected.

IsSelected Property

Gets or sets whether the current item is selected among the items in the HamburgerSubMenu to which it belongs.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IsSelected As Boolean
```

C#

```
public bool IsSelected { get; set; }
```

Property Value

true, if the current item is selected in its sub-menu; otherwise, **false**.

Remarks

The **IsSelected** property specifies whether the current item is selected among the items in the HamburgerSubMenu to which it belongs. To get the item currently selected in the sub-menu, use the HamburgerSubMenu.SelectedItem.

PreviewContent Property

Gets or sets the content for the current sub-menu item displayed directly in the main menu as a preview.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property PreviewContent As Object
```

C#

```
public object PreviewContent { get; set; }
```

Property Value

The content for the current sub-menu item displayed directly in the main menu as a preview.

Remarks

If the ShowInPreview option is enabled, the current item is displayed below the sub-menu button directly in the main menu. By default, the button's content in the preview is the same as the principal content displayed in the sub-menu fly-out panel. However, using the **PreviewContent** proprety you can provide a custom button's content to be displayed in the preview. To specify how the provided data object is rendered, use the PreviewContentTemplate property. If no data template is assigned, the string representation of the object is used.

The PreviewRightContent property specifies the button s additional content for the preview to be displayed instead of the RightContent.

C#

```
<Layout:HamburgerSubMenuNavigationButton Content="Inbox" RightContent="142" ShowInPreview="True" PreviewCo
```

PreviewContentTemplate Property

Gets or sets the data template used to render the item's content in the preview.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property PreviewContentTemplate As DataTemplate
```

C#

```
public DataTemplate PreviewContentTemplate { get; set; }
```

Property Value

The data template used to render the item's content in the preview.

Remarks

Use the PreviewContent property to specify the item's content displayed in the preview. The **PreviewContentTemplate** property specifies the data template used to render the provided data object. If no data template is assigned, the object string representation is used.

PreviewContextMenu Property

Gets or sets the context menu that is invoked when the end-user right-clicks the navigation button shown in the preview.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property PreviewContextMenu As Object
```

C#

```
public object PreviewContextMenu { get; set; }
```

Property Value

The UI element invoked when the end-user right-clicks the navigation button shown in the preview.

Remarks

The ContextMenu specifies the context menu for the item shown in the regular Sub Menu.

PreviewMarkTemplate Property

Gets or sets the template used to render the favorite mark for the current button.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property PreviewMarkTemplate As DataTemplate
```

C#

```
public DataTemplate PreviewMarkTemplate { get; set; }
```

Property Value

The template used to render the favorite mark for the current button.

Remarks

Use the ShowPreviewMark property to specify whether to show the favorite mark for the current button if the button is also displayed in the preview. The **PreviewMarkTemplate** property specifies the template used to render the mark.

PreviewRightContent Property

Gets or sets the additional button content displayed to the right of the principal content when the button is displayed in the preview.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property PreviewRightContent As Object
```

C#

```
public object PreviewRightContent { get; set; }
```

Property Value

The additional button content.

Remarks

The RightContent property allows you to specify additional content displayed to the right of the button's principal content. For instance, if a given button opens a folder in the mail box, you can use this property to indicate to the end-user the number of unread messages in the folder.

If the ShowInPreview option is enabled, the current item is displayed below the sub-menu button directly in the main menu. By default, the button's additional content in the preview is the same as the content specified with the RightContent property. However, using the **PreviewRightContent** property you can provide custom additional content to be displayed in the preview. To specify how the provided data object is rendered, use the PreviewRightContentTemplate property. If no data template is assigned, the string representation of the object is used.

The PreviewContent property specifies the button content for the preview to be displayed instead of the principal **Content**.

C#

```
<Layout:HamburgerSubMenuNavigationButton Content="Inbox" RightContent="142" ShowInPreview="True" PreviewCo
```

PreviewRightContentTemplate Property

Gets or sets the data template used to render the additional content of the current button displayed in the preview.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property PreviewRightContentTemplate As DataTemplate
```

C#

```
public DataTemplate PreviewRightContentTemplate { get; set; }
```

Property Value

The data template used to render the additional content of the current button displayed in the preview.

Remarks

Use the PreviewRightContent property to specify the additional content of the current button in the preview. The **PreviewRightContentTemplate** property specifies the data template used to render the data object. If no data template is assigned, the string representation of the object is used.

RightContent Property

Gets or sets the additional button content displayed to the right of the main content.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property RightContent As Object
```

C#

```
public object RightContent { get; set; }
```

Property Value

The additional button content.

Remarks

Use the HamburgerSubMenuNavigationButton's **Content** property to specify the button content, and the **ContentTemlate** property to provide a data template used to render the data object. The **RightContent** property allows you to specify additional content displayed to the right of the main content. For instance, if a given button opens a folder in the mail box, you can use this property to indicate to the end-user the number of unread messages in the folder. Use the RightContentTemplate property to specify a data template used to render the data object. If the data template is not specified, the string representation of the object is used. The RightContentMargin property sets the outer margin of the content.

RightContentMargin Property

Gets or sets the outer margin of the additional content displayed to the right of the main content.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property RightContentMargin As Thickness
```

C#

```
public Thickness RightContentMargin { get; set; }
```

Property Value

A Thickness structure that specifies the outer margin of the additional content displayed to the right of the main content.

Remarks

Use the **RightContentMargin** property to specify the outer margin of the RightContent.

RightContentTemplate Property

Gets or sets the data template used to render the additional content displayed to the right of the main content.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property RightContentTemplate As DataTemplate
```

C#

```
public DataTemplate RightContentTemplate { get; set; }
```

Property Value

A DataTemplate object used to render the content.

Remarks

Use the RightContent property to specify a data object for the additional button content. The **RightContentTemplate** property allows you to provide a data template used to render the data object. If no data template is specified, the string representation of the object is used.

ShowInPreview Property

Gets or sets whether the current sub menu item is shown as a preview directly in the main menu below the sub-menu button. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowInPreview As Boolean
```

C#

```
public bool ShowInPreview { get; set; }
```

Property Value

true, if the current sub menu item is shown as a preview directly in the main menu below the sub menu button; otherwise, **false**.

Remarks

With the HamburgerSubMenu.Items collection, you specify items of the current sub menu. These items are displayed in the fly-out panel invoked by clicking or tapping the sub-menu button. It is also possible to display sub menu items directly in the main menu below the sub menu button, as a preview. To display a particular item in a preview, set its **ShowInPreview** property to **true**. See an example below.

Xaml

```
xmlns:Layout="using:DevExpress.UI.Xaml.Layout"
<Layout:HamburgerSubMenu Content="Folders">
    <Layout:HamburgerSubMenu.Icon>
        <FontIcon FontFamily="Segoe MDL2 Assets" Glyph="&#xE8B7;" />
    </Layout:HamburgerSubMenu.Icon>
    <Layout:HamburgerSubMenu.Items>
        <Layout:HamburgerSubMenuNavigationButton Content="Outbox" RightContent="12" NavigationTargetType="
        <Layout:HamburgerSubMenuNavigationButton Content="Inbox" RightContent="142" ShowInPreview="True" N
        <Layout:HamburgerSubMenuNavigationButton Content="Drafts" RightContent="2" ShowInPreview="True" Na
        <Layout:HamburgerSubMenuNavigationButton Content="Junk" NavigationTargetType="local:HamburgerMenuI
        <Layout:HamburgerSubMenuNavigationButton Content="Sent" RightContent="452" ShowInPreview="True" Pa
        <Layout:HamburgerSubMenuNavigationButton Content="Trash" RightContent="15" NavigationTargetType="L
    </Layout:HamburgerSubMenu.Items>
</Layout:HamburgerSubMenu>
```

In the figure below, you can see the items that are displayed directly in the main menu as a preview.

ShowPreviewMark Property

Gets or sets whether the current item is marked as favorite in the sub-menu fly-out panel when it is assigned to be displayed in the preview.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowPreviewMark As Boolean
```

C#

```
public bool ShowPreviewMark { get; set; }
```

Property Value

true, to show the mark indicating that the current item is favorite and also displayed in the preview; otherwise, **false**. The default is **true**.

Remarks

If the ShowInPreview property is set to **true**, the current item is displayed directly in the main menu in the preview. If this option is enabled, the current item is marked as favorite in the sub-menu fly-out panel indicating that the current item is also displayed in the preview. Set the **ShowPreviewMark** property to **false**, to hide this mark.

SyncWithActivePage Property

Gets or sets whether the current button is automatically selected if the button's target page has been navigated.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SyncWithActivePage As Boolean
```

C#

```
public bool SyncWithActivePage { get; set; }
```

Property Value

true, if the current button is automatically selected if the button's target page has been navigated; otherwise, **false**. The default is **true**.

Remarks

If the HamburgerMenu.SyncWithActivePage option is enabled, the button selection in the menu is automatically synchronized with the navigated page. Set the **SyncWithActivePage** property to **false** to disable this feature for the current button.

UseContextMenuAsPreview Property

Gets or sets whether to use the context menu assigned to the ContextMenu property regardless of whether the button is shown in the regular Sub Menu or in the preview. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property UseContextMenuAsPreview As Boolean
```

C#

```
public bool UseContextMenuAsPreview { get; set; }
```

Property Value

true, to use the context menu assigned to the ContextMenu property for both regular sub menu and preview; otherwise, **false**.

Remarks

If the **UseContextMenuAsPreview** property is set to **false**, the context menu assigned to the PreviewContextMenu property is used for the button shown in the preview.

UseNavigationTargetParameterForSync Property

Gets or sets whether to use current button's navigation parameters to synchronize the button selection in the menu with the navigated page.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property UseNavigationTargetParameterForSync As Boolean
```

C#

```
public bool UseNavigationTargetParameterForSync { get; set; }
```

Property Value

true, to use current button's navigation parameters to synchronize the button selection in the menu with the navigated page; otherwise, **false**. The default is **false**.

Remarks

If the HamburgerMenu.SyncWithActivePage option is enabled, the button selection in the menu is automatically synchronized with the navigated page. By default, this synchronization is performed based on the button's navigation target page and the page being navigated. The navigation parameters are not taken into account for the synchronization, by default. Enable the **UseNavigationTargetParameterForSync** option for the current button to perform the automatic synchronization according to the button's navigation parameters.

PreviewItemClick Event

Occurs when the end-user clicks the button within the preview.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
event Public PreviewItemClick As EventHandler(of PreviewItemClickEventArgs)
```

C#

```
public event EventHandler<PreviewItemClickEventArgs> PreviewItemClick
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Layout.PreviewItemClickEventArgs containing data related to this event.

Remarks

The button is shown in the preview if its ShowInPreview property is set to **true**.

PreviewItemRightTapped Event

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
event Public PreviewItemRightTapped As EventHandler(of RightTappedRoutedEventArgs)
```
C#
```
public event EventHandler<RightTappedRoutedEventArgs> PreviewItemRightTapped
```

Event Data

The event handler receives an argument of type Windows.UI.Xaml.Input.RightTappedRoutedEventArgs containing data related to this event.

The following **RightTappedRoutedEventArgs** properties provide information specific to this event.

Property	Description
Handled	
PointerDeviceType

HeaderAlignment Enumeration

Contains values that specify whether a specific LayoutItem's header is aligned according to the alignment setting of the group where the item resides.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Enum HeaderAlignment
```
C#
```
public enum HeaderAlignment
```

Members

Name	Description
Default	The specified LayoutItem's header is taken into account when aligning other items within the same LayoutGroup according to the LayoutGroupBase.ItemHeadersAlignment option.
None	The specified LayoutItem's header is not taken into account when aligning other items within the same LayoutGroup.

Remarks

Use the LayoutItem.HeaderAlignment property to control whether a specific LayoutItem's header is aligned according to the alignment setting of the group where the item resides.

HeaderedContentContainer Members

The base class for headered controls displaying specific content and supporting header styling and alignment.

The following tables list the members exposed by the HeaderedContentContainer type.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

HeaderedContentContainer Properties

The base class for headered controls displaying specific content and supporting header styling and alignment.

The following tables list the members exposed by the HeaderedContentContainer type.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

HeaderStyle Property

Gets or sets the style applied to the container's header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderStyle As Style
```

C#

```
public Style HeaderStyle { get; set; }
```

Property Value

The style applied to the container's header.

Remarks

Control	The type for which the style is intended (TargetType)
ExpandContainer	**ExpandContainerHeader**
GroupContainer	**GroupContainerHeader**
LayoutItem	**LayoutItemHeader**

The following code changes the font attributes of an ExpandContainer's header:

Xaml

```
xmlns:Layout="using:DevExpress.UI.Xaml.Layout"
<Layout:ExpandContainer Header="Header">
    <Layout:ExpandContainer.HeaderStyle>
        <Style TargetType="Layout:ExpandContainerHeader">
            <Setter Property="Foreground" Value="Red"/>
            <Setter Property="FontSize" Value="32"/>
        </Style>
    </Layout:ExpandContainer.HeaderStyle>
    Header
</Layout:ExpandContainer>
```

HorizontalHeaderAlignment Property

Gets or sets the horizontal alignment of the container's header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HorizontalHeaderAlignment As HorizontalAlignment
```

C#

```
public HorizontalAlignment HorizontalHeaderAlignment { get; set; }
```

Property Value

The horizontal alignment of the container's header.

VerticalHeaderAlignment Property

Gets or sets the vertical alignment of the container's header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property VerticalHeaderAlignment As VerticalAlignment
```

C#

```
public VerticalAlignment VerticalHeaderAlignment { get; set; }
```

Property Value

The vertical alignment of the container's header.

HeaderedItemsContainer Members

The base class for headered item containers supporting header styling and alignment.

The following tables list the members exposed by the HeaderedItemsContainer type.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedItemsControl.Header via the veHeaderedItemsControl.HeaderStringFormat property. (Inherited from **veHeaderedItemsControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

HeaderedItemsContainer Properties

The base class for headered item containers supporting header styling and alignment.

The following tables list the members exposed by the HeaderedItemsContainer type.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedItemsControl.Header via the veHeaderedItemsControl.HeaderStringFormat property. (Inherited from **veHeaderedItemsControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GroupStyle	(Inherited from **Windows.UI.Xaml.Controls.ItemsControl**)
	GroupStyleSelector	(Inherited from **Windows.UI.Xaml.Controls.ItemsControl**)
	GroupStyleSelectorProperty	(Inherited from **Windows.UI.Xaml.Controls.ItemsControl**)
	HasHeader	Gets whether the control's veHeaderedItemsControl.Header is not empty. (Inherited from **veHeaderedItemsControl**)
	HasHeaderTemplate	Gets whether the veHeaderedItemsControl.HeaderTemplate is not empty. (Inherited from **veHeaderedItemsControl**)
	HasItems	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veItemsControl**)
	Header	Gets or sets the control's header. (Inherited from **veHeaderedItemsControl**)
	HeaderStringFormat	Gets or sets a composite format string for the veHeaderedItemsControl.Header object. (Inherited from **veHeaderedItemsControl**)
	HeaderStyle	Gets or sets the style applied to the container's header.
	HeaderTemplate	Gets or sets the template used to render the veHeaderedItemsControl.Header object. (Inherited from **veHeaderedItemsControl**)
	HeaderTemplateSelector	Gets or sets an object that chooses a header template based on custom logic. (Inherited from **veHeaderedItemsControl**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

HeaderStyle Property

Gets or sets the style applied to the container's header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderStyle As Style
```

C#

```
public Style HeaderStyle { get; set; }
```

Property Value

The style applied to the container's header.

Remarks

Control	The type for which the style is intended (TargetType)
LayoutControl	**LayoutControlHeader**
LayoutGroup	**LayoutGroupHeader**

The following code changes the font attributes of a LayoutGroup's header:

Xaml

```
xmlns:Layout="using:DevExpress.UI.Xaml.Layout"
xmlns:dxEditors="using:DevExpress.UI.Xaml.Editors"
<Layout:LayoutGroup Header="Details">
    <Layout:LayoutGroup.HeaderStyle>
        <Style TargetType="Layout:LayoutGroupHeader">
            <Setter Property="Foreground" Value="Red"/>
            <Setter Property="FontSize" Value="32"/>
        </Style>
    </Layout:LayoutGroup.HeaderStyle>
    <Layout:LayoutItem Header="Purchase price:" Required="True">
        <dxEditors:TextEdit Width="150"/>
    </Layout:LayoutItem>
</Layout:LayoutGroup>
```

HorizontalHeaderAlignment Property

Gets or sets the horizontal alignment of the container's header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HorizontalHeaderAlignment As HorizontalAlignment
```

C#

```
public HorizontalAlignment HorizontalHeaderAlignment { get; set; }
```

Property Value

The horizontal alignment of the container's header.

VerticalHeaderAlignment Property

Gets or sets the vertical alignment of the container's header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property VerticalHeaderAlignment As VerticalAlignment
```

C#

```
public VerticalAlignment VerticalHeaderAlignment { get; set; }
```

Property Value

The vertical alignment of the container's header.

HeaderPosition Enumeration

Enumerates possible positions of a LayoutItem's header relative to its content region.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Enum HeaderPosition
```
C#
```
public enum HeaderPosition
```

Members

Name	Description
Default	The default header position. In the snapped app state, headers are displayed at the top of the item's content. In other app states, headers are displayed at the left of the item's content.
Left	An item's header is placed at the left of the item's content.
Top	An item's header is placed at the top of the item's content.

Remarks

Use the LayoutItem.HeaderPosition property to specify the position of a LayoutItem's header relative to its content region.

HeadersAlignment Enumeration

Contains values that specify how LayoutItem headers are aligned within a specific LayoutGroup.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Enum HeadersAlignment
```

C#

```
public enum HeadersAlignment
```

Members

Name	Description
Default	The headers of layout items within the specified group are resized according to the parent group's LayoutGroupBase.ItemHeadersAlignment setting.
Local	The headers of layout items within the specified group have the same width, matching the maximum header width. This ensures that the content portions of LayoutItems are equally aligned. Layout items in nested groups are also taken into account if these groups have their header alignment set to **Default**.
None	The headers of layout items within the specified group are independently resized to the minimum width that allows the text to be displayed in its entirety.

Remarks

Use the LayoutGroupBase.ItemHeadersAlignment property to control how LayoutItem headers are aligned within a specific LayoutGroup.

ItemSizeMode Enumeration

Contains values that specify how items are resized within a LayoutGroup.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Enum ItemSizeMode
```
C#
```
public enum ItemSizeMode
```

Members

Name	Description
AutoSize	Items are auto-sized according to their contents.
Default	The default sizing behavior (either AutoSize or Stretch), determined by the item's alignment and content and by the item arrangement within a group.
Stretch	Items are stretched proportionally. You can specify a stretch ratio via the LayoutGroup.StretchRatio attached property.

Remarks

By default, layout items are resized according to the LayoutGroupBase.HorizontalItemSizeMode and LayoutGroupBase.VerticalItemSizeMode properties of the group where the items reside. The LayoutItem.SizeMode property allows you to specify the size mode for individual LayoutItems, overriding the default size mode imposed by the group's settings.

To specify a size mode for a LayoutGroup's items that are not of the LayoutItem type, use the LayoutGroup.SizeMode attached property.

LayoutAwareDecorator Class

Allows you to manage a control's visibility in specific app states.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class LayoutAwareDecorator Inherits veDecorator, ILayoutAwareControl
```

C#

```
public class LayoutAwareDecorator : veDecorator, ILayoutAwareControl
```

Remarks

The **LayoutAwareDecorator** manages the visibility of its **immediate** children in various app states. It cannot be used to control the visibility of its children's children.

To display any control in a specific app state(s) and hide it in other states, you can wrap this control with the **LayoutAwareDecorator** and set the ViewStateVisibility attached property for this control to the required value.

If you do not explicitly set the ViewStateVisibility attached property for a control, the control's visibility will be specified by the DefaultViewStateVisibility property.

ActualViewState Property

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic

```
Public ReadOnly Property ActualViewState As ViewState
```

C#

```
public ViewState ActualViewState { get; }
```

Property Value

See Also
LayoutAwareDecorator Class
LayoutAwareDecorator Members
DevExpress.UI.Xaml.Layout Namespace

DefaultViewStateVisibility Property

Gets or sets the app state(s) in which an object must be visible by default.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property DefaultViewStateVisibility As ViewStateVisibility
```

C#

```
public ViewStateVisibility DefaultViewStateVisibility { get; set; }
```

Property Value

A ViewStateVisibility value that specifies the app state(s) in which an object must be visible by default. The default value is ViewStateVisibility.Unsnapped.

Remarks

The **DefaultViewStateVisibility** property is applied if an object's ViewStateVisibility attached property is set to Default. In this case, the object will only be visible in the app state(s) specified by the **DefaultViewStateVisibility** property.

ViewStateVisibility Attached Property

Gets or sets the app state(s) in which an object will be visible. In other app states, the object will be hidden. This is an attached property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
See GetViewStateVisibility, SetViewStateVisibility
```

C#

```
See GetViewStateVisibility, SetViewStateVisibility
```

Property Value

A ViewStateVisibility value that specifies the app state(s) in which an object will be visible.

GetViewStateVisibility Method

Gets the value of the ViewStateVisibility attached property for a specific object.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
static Public Function GetViewStateVisibility(
   ByVal dObj As DependencyObject
) As ViewStateVisibility
```

C#

```
public static ViewStateVisibility GetViewStateVisibility(
   DependencyObject dObj
)
```

Parameters

dObj
An object whose value of the ViewStateVisibility property is to be returned.

Return Value

The value of the ViewStateVisibility property for a specific object.

SetViewStateVisibility Method

Sets the value of the ViewStateVisibility attached property for a specific object.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
static Public Sub SetViewStateVisibility(
   ByVal dObj As DependencyObject,
   ByVal value As ViewStateVisibility
)
```

C#

```
public static void SetViewStateVisibility(
   DependencyObject dObj,
   ViewStateVisibility value
)
```

Parameters

dObj
An object whose ViewStateVisibility attached property is to be set.
value
A new value of the ViewStateVisibility attached property for the specified object.

LayoutControl Class

A control container that arranges its items in a single column or row, and allows you to create compound layouts of controls, with the ability to combine the controls into groups and align the controls according to their headers.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class LayoutControl Inherits LayoutGroupBase, ILayoutGroup
```

C#

```
public class LayoutControl : LayoutGroupBase, ILayoutGroup
```

Remarks

The LayoutControl container arranges its child items in a single column or row, according to the LayoutGroupBase.Orientation inherited property. Any type of control can be added to the LayoutControl container. However, the most typical items are these:

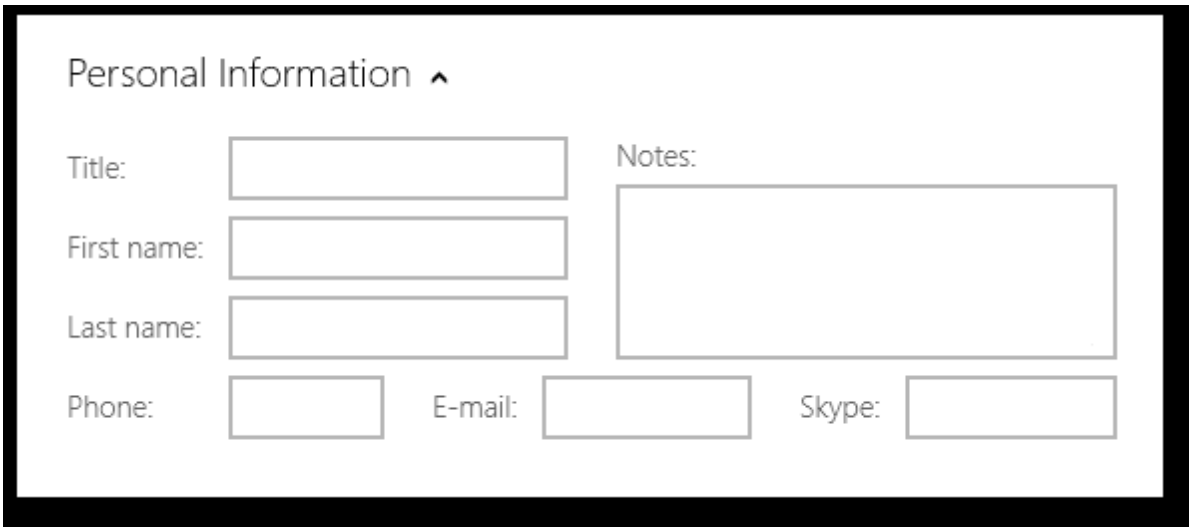
- LayoutGroup - A container arranging its items either horizontally or vertically. With the help of LayoutGroups, you can create compound layouts of controls, where horizontally aligned controls are displayed next to vertically aligned controls.
- LayoutItem - A control capable of displaying a header next to a specific content. When using LayoutItem objects as wrappers for your controls within a LayoutControl, you benefit from the automatic control alignment feature, where controls are aligned according to their headers. This feature is controlled by the LayoutGroupBase.ItemHeadersAlignment and LayoutItem.HeaderAlignment properties.

The following image shows a sample LayoutControl that displays LayoutItems combined into LayoutGroups:

Example

The following code creates a LayoutControl with nested LayoutGroups. Item arrangement within the groups is controlled by the LayoutGroupBase.Orientation property:

© 2018 Developer Express Inc.



Xaml

```
xmlns:Layout="using:DevExpress.UI.Xaml.Layout"
xmlns:Editors="using:DevExpress.UI.Xaml.Editors"
<Layout:LayoutControl  Width="550">
    <Layout:LayoutGroup Orientation="Vertical" Header="Personal Information" AllowExpand="True">
        <Layout:LayoutGroup Orientation="Horizontal">
            <Layout:LayoutGroup Orientation="Vertical">
                <Layout:LayoutItem Header="Title:"><Editors:TextEdit/></Layout:LayoutItem>
                <Layout:LayoutItem Header="First name:"><Editors:TextEdit/></Layout:LayoutItem>
                <Layout:LayoutItem Header="Last name:"><Editors:TextEdit/></Layout:LayoutItem>
            </Layout:LayoutGroup>
            <Layout:LayoutItem HeaderPosition="Top" Header="Notes:"><Editors:TextEdit/></Layout:LayoutIter
        </Layout:LayoutGroup>
        <Layout:LayoutGroup Orientation="Horizontal">
            <Layout:LayoutItem Header="Phone:"><Editors:TextEdit/></Layout:LayoutItem>
            <Layout:LayoutItem Header="E-mail:"><Editors:TextEdit/></Layout:LayoutItem>
            <Layout:LayoutItem Header="Skype:"><Editors:TextEdit/></Layout:LayoutItem>
        </Layout:LayoutGroup>
    </Layout:LayoutGroup>
</Layout:LayoutControl>
```

LayoutControl Members

A control container that arranges its items in a single column or row, and allows you to create compound layouts of controls, with the ability to combine the controls into groups and align the controls according to their headers.

The following tables list the members exposed by the LayoutControl type.

Public Constructors

	Name	Description
	LayoutControl	Initializes a new instance of the LayoutControl class.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedItemsControl.Header via the veHeaderedItemsControl.HeaderStringFormat property. (Inherited from **veHeaderedItemsControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualViewState	(Inherited from **DevExpress.UI.Xaml.Layout.LayoutAwareHeaderedItemsContainer**)

LayoutControl Constructor

Initializes a new instance of the LayoutControl class.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public LayoutControl()
```

LayoutControl Properties

A control container that arranges its items in a single column or row, and allows you to create compound layouts of controls, with the ability to combine the controls into groups and align the controls according to their headers.

The following tables list the members exposed by the LayoutControl type.

Public Constructors

	Name	Description
	LayoutControl	Initializes a new instance of the LayoutControl class.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedItemsControl.Header via the veHeaderedItemsControl.HeaderStringFormat property. (Inherited from **veHeaderedItemsControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualViewState	(Inherited from **DevExpress.UI.Xaml.Layout.LayoutAwareHeaderedItemsContainer**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

HorizontalScrollBarVisibility Property

Gets or sets the horizontal scroll bar's visibility.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HorizontalScrollBarVisibility As ScrollBarVisibility
```

C#

```
public ScrollBarVisibility HorizontalScrollBarVisibility { get; set; }
```

Property Value

The horizontal scroll bar's visibility.

VerticalScrollBarVisibility Property

Gets or sets the vertical scroll bar's visibility.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property VerticalScrollBarVisibility As ScrollBarVisibility
```

C#

```
public ScrollBarVisibility VerticalScrollBarVisibility { get; set; }
```

Property Value

The vertical scroll bar's visibility.

LayoutGroup Class

A group of horizontally or vertically aligned items.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class LayoutGroup Inherits LayoutGroupBase, ILayoutGroup
```

C#

```
public class LayoutGroup : LayoutGroupBase, ILayoutGroup
```

Remarks

A LayoutGroup object arranges its items either horizontally or vertically, as specified by the LayoutGroupBase.Orientation and LayoutGroupBase.PortraitOrientation inherited properties. You can add other LayoutGroups as children to a LayoutGroup, creating a complex layout.

To provide headers for LayoutGroups, use the **Header** inherited property. Groups support the expand/collapse functionality, controlled by the AllowExpand and Expanded properties.

Any controls can be displayed as LayoutGroup children. However, most typical children are LayoutItem and other LayoutGroup objects. When LayoutItems are displayed within LayoutGroups, their headers are aligned according to the LayoutGroupBase.ItemHeadersAlignment and LayoutItem.HeaderAlignment properties.

Example 1

The following code creates a LayoutControl with a single LayoutGroup. Items within the group are vertically aligned via the LayoutGroupBase.Orientation property:

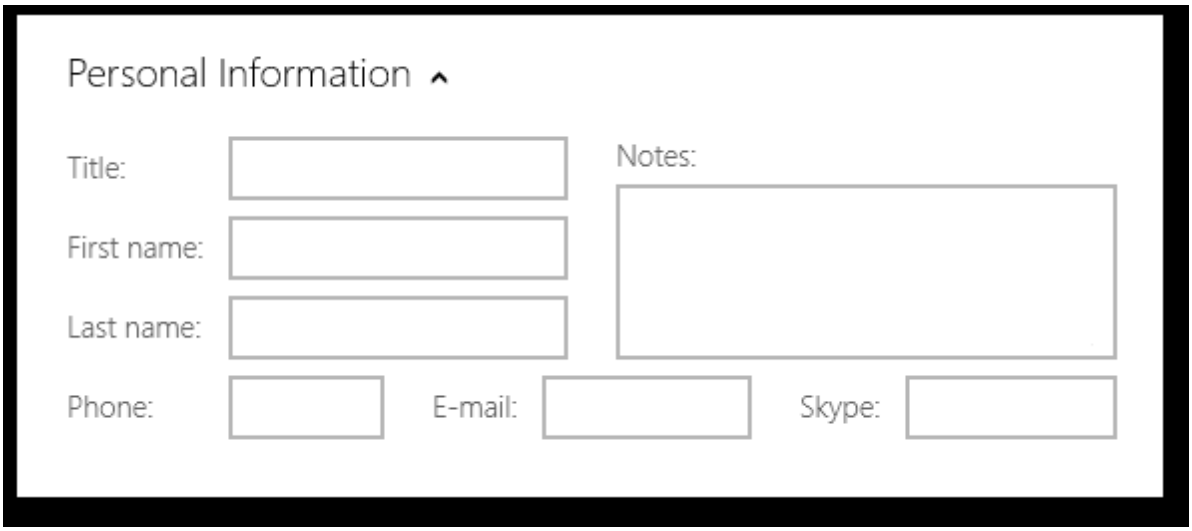
Xaml

```
<Layout:LayoutControl Orientation="Vertical" Width="400">
    <Layout:LayoutGroup Orientation="Vertical" Header="Personal Information" AllowExpand="True">
        <Layout:LayoutItem Header="First name:"><Editors:TextEdit/></Layout:LayoutItem>
        <Layout:LayoutItem Header="Last name:"><Editors:TextEdit/></Layout:LayoutItem>
    </Layout:LayoutGroup>
</Layout:LayoutControl>
```

Example 2

The following code creates a LayoutControl with nested LayoutGroups. Item arrangement within the groups is controlled by the LayoutGroupBase.Orientation property:

© 2018 Developer Express Inc.



Xaml

```
xmlns:Layout="using:DevExpress.UI.Xaml.Layout"
xmlns:Editors="using:DevExpress.UI.Xaml.Editors"
<Layout:LayoutControl  Width="550">
    <Layout:LayoutGroup Orientation="Vertical" Header="Personal Information" AllowExpand="True">
        <Layout:LayoutGroup Orientation="Horizontal">
            <Layout:LayoutGroup Orientation="Vertical">
                <Layout:LayoutItem Header="Title:"><Editors:TextEdit/></Layout:LayoutItem>
                <Layout:LayoutItem Header="First name:"><Editors:TextEdit/></Layout:LayoutItem>
                <Layout:LayoutItem Header="Last name:"><Editors:TextEdit/></Layout:LayoutItem>
            </Layout:LayoutGroup>
            <Layout:LayoutItem HeaderPosition="Top" Header="Notes:"><Editors:TextEdit/></Layout:LayoutIter
        </Layout:LayoutGroup>
        <Layout:LayoutGroup Orientation="Horizontal">
            <Layout:LayoutItem Header="Phone:"><Editors:TextEdit/></Layout:LayoutItem>
            <Layout:LayoutItem Header="E-mail:"><Editors:TextEdit/></Layout:LayoutItem>
            <Layout:LayoutItem Header="Skype:"><Editors:TextEdit/></Layout:LayoutItem>
        </Layout:LayoutGroup>
    </Layout:LayoutGroup>
</Layout:LayoutControl>
```

LayoutGroup Members

A group of horizontally or vertically aligned items.

The following tables list the members exposed by the LayoutGroup type.

Public Constructors

	Name	Description
	LayoutGroup	Initializes a new instance of the LayoutGroup class.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedItemsControl.Header via the veHeaderedItemsControl.HeaderStringFormat property. (Inherited from **veHeaderedItemsControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualViewState	(Inherited from **DevExpress.UI.Xaml.Layout.LayoutAwareHeaderedItemsContainer**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowExpand	Gets or sets whether the LayoutGroup supports the expand functionality.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

	GroupStyleSelector	(Inherited from **Windows.UI.Xaml.Controls.ItemsControl**)
	GroupStyleSelectorProperty	(Inherited from **Windows.UI.Xaml.Controls.ItemsControl**)
	HasHeader	Gets whether the control's veHeaderedItemsControl.Header is not empty. (Inherited from **veHeaderedItemsControl**)
	HasHeaderTemplate	Gets whether the veHeaderedItemsControl.HeaderTemplate is not empty. (Inherited from **veHeaderedItemsControl**)
	HasItems	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veItemsControl**)
	Header	Gets or sets the control's header. (Inherited from **veHeaderedItemsControl**)
	HeaderStringFormat	Gets or sets a composite format string for the veHeaderedItemsControl.Header object. (Inherited from **veHeaderedItemsControl**)
	HeaderStyle	Gets or sets the style applied to the container's header. (Inherited from

© 2018 Developer Express Inc.

		HeaderedItemsContainer)
	HeaderTemplate	Gets or sets the template used to render the veHeaderedItemsControl.Header object. (Inherited from **veHeaderedItemsControl**)
	HeaderTemplateSelector	Gets or sets an object that chooses a header template based on custom logic. (Inherited from **veHeaderedItemsControl**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalHeaderAlignment	Gets or sets the horizontal alignment of the container's header. (Inherited from **HeaderedItemsContainer**)
	HorizontalItemSizeMode	Gets or sets the way items within the current group are resized when the items are horizontally aligned. (Inherited from **LayoutGroupBase**)
	HorizontalItemSpacing	Gets or sets the space between adjacent items when they are horizontally arranged within the group. (Inherited from **LayoutGroupBase**)
	Index	Gets or sets a layout cell index where a layout item will be placed. This is an attached property.
	IsAdaptive	(Inherited from **LayoutGroupBase**)
	IsAttachedToVisualTree	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veItemsControl**)
	IsDisposing	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veItemsControl**)

LayoutGroup Constructor

Initializes a new instance of the LayoutGroup class.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public LayoutGroup()
```

LayoutGroup Properties

A group of horizontally or vertically aligned items.

The following tables list the members exposed by the LayoutGroup type.

Public Constructors

	Name	Description
	LayoutGroup	Initializes a new instance of the LayoutGroup class.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedItemsControl.Header via the veHeaderedItemsControl.HeaderStringFormat property. (Inherited from **veHeaderedItemsControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualViewState	(Inherited from **DevExpress.UI.Xaml.Layout.LayoutAwareHeaderedItemsContainer**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowExpand	Gets or sets whether the LayoutGroup supports the expand functionality.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

	GroupStyleSelector	(Inherited from **Windows.UI.Xaml.Controls.ItemsControl**)
	GroupStyleSelectorProperty	(Inherited from **Windows.UI.Xaml.Controls.ItemsControl**)
	HasHeader	Gets whether the control's veHeaderedItemsControl.Header is not empty. (Inherited from **veHeaderedItemsControl**)
	HasHeaderTemplate	Gets whether the veHeaderedItemsControl.HeaderTemplate is not empty. (Inherited from **veHeaderedItemsControl**)
	HasItems	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veItemsControl**)
	Header	Gets or sets the control's header. (Inherited from **veHeaderedItemsControl**)
	HeaderStringFormat	Gets or sets a composite format string for the veHeaderedItemsControl.Header object. (Inherited from **veHeaderedItemsControl**)
	HeaderStyle	Gets or sets the style applied to the container's header. (Inherited from

© 2018 Developer Express Inc.

		HeaderedItemsContainer)
	HeaderTemplate	Gets or sets the template used to render the veHeaderedItemsControl.Header object. (Inherited from **veHeaderedItemsControl**)
	HeaderTemplateSelector	Gets or sets an object that chooses a header template based on custom logic. (Inherited from **veHeaderedItemsControl**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalHeaderAlignment	Gets or sets the horizontal alignment of the container's header. (Inherited from **HeaderedItemsContainer**)
	HorizontalItemSizeMode	Gets or sets the way items within the current group are resized when the items are horizontally aligned. (Inherited from **LayoutGroupBase**)
	HorizontalItemSpacing	Gets or sets the space between adjacent items when they are horizontally arranged within the group. (Inherited from **LayoutGroupBase**)
	Index	Gets or sets a layout cell index where a layout item will be placed. This is an attached property.
	IsAdaptive	(Inherited from **LayoutGroupBase**)
	IsAttachedToVisualTree	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veItemsControl**)
	IsDisposing	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veItemsControl**)

AllowExpand Property

Gets or sets whether the LayoutGroup supports the expand functionality.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowExpand As DefaultBoolean
```

C#

```
public DefaultBoolean AllowExpand { get; set; }
```

Property Value

true if the LayoutGroup supports the expand functionality; otherwise, **false**.

Remarks

An expandable LayoutGroup contains an Expand button in its header, allowing an end-user to expand/collapse the group:

To expand/collapse the group in code, use the Expanded property.

ExpandButtonStyle Property

Gets or sets the style applied to the Expand button.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ExpandButtonStyle As Style
```

C#

```
public Style ExpandButtonStyle { get; set; }
```

Property Value

The style applied to the Expand button.

Remarks

The **TargetType** is **ExpandButton**.

Expanded Property

Gets or sets whether the group is expanded. This property is supported if the expand functionality is enabled.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Expanded As Boolean
```

C#

```
public bool Expanded { get; set; }
```

Property Value

true if the group is expanded; otherwise, **false**.

Remarks

To enable the expand functionality for a LayoutGroup, set the AllowExpand property to **true**.

The **Expanded** property allows you to expand/collapse a group in code.

Index Attached Property

Gets or sets a layout cell index where a layout item will be placed. This is an attached property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
See GetIndex, SetIndex
```

C#

```
See GetIndex, SetIndex
```

Property Value

A zero-based layout cell index of a specific layout item.

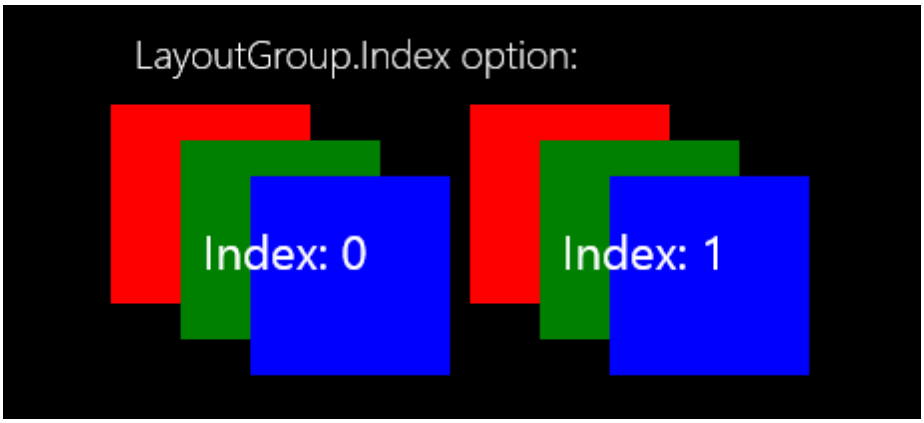
Remarks

You can use the **Index** attached property to combine two or more layout items into a single layout cell, so that they overlap each other. For instance, this might be useful if you want to display text above another control.

To combine layout items into one layout cell, set the **Index** attached property for these items to the same value. A value of **0** means that items will be displayed at the beginning of the LayoutGroup. A value of **1** means that items will be displayed at the second position within the LayoutGroup, etc.

Example

The following example shows how to combine items into layout cells using the Index attached property. Eight items are combined into two cells and so overlap each other. Due to different alignment settings applied to the items, you can see all of them at the same time.



Xaml

IsExpandButtonVisible Property

Gets whether the expand button is visible.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsExpandButtonVisible As Boolean
```

C#

```
public bool IsExpandButtonVisible { get; }
```

Property Value

true, if the expand button is visible; otherwise, **false**.

See Also

LayoutGroup Class
LayoutGroup Members
DevExpress.UI.Xaml.Layout Namespace

IsExpanded Property

Gets whether the group is expanded.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsExpanded As Boolean
```

C#

```
public bool IsExpanded { get; }
```

Property Value

true, if the group is expanded; otherwise, **false**.

Remarks

Use the Expanded property to expand/collapse the group in code. An end-user can expand/collapse the group via an Expand button.

SizeMode Attached Property

Allows you to set size mode for any object within the LayoutGroup. This is an attached property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
See GetSizeMode, SetSizeMode
```

C#

```
See GetSizeMode, SetSizeMode
```

Property Value

An ItemSizeMode value that is the size mode for the specified object within the LayoutGroup.

Remarks

The default size mode for all items within a LayoutGroup is specified by the LayoutGroupBase.HorizontalItemSizeMode and LayoutGroupBase.VerticalItemSizeMode properties. To override the default sizing behavior for individual items, you can use:

- the LayoutItem.SizeMode property for LayoutItem objects;
- the **LayoutGroup.SizeMode** attached property for a group's items that are not of the LayoutItem type.

LayoutGroupBase.VerticalItemSizeMode
LayoutItem.SizeMode

© 2018 Developer Express Inc.

StretchRatio Attached Property

Gets or sets a LayoutGroup item's stretch ratio. The property is in effect when an item's size mode is ItemSizeMode.Stretch. This is an attached property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
See GetStretchRatio, SetStretchRatio
```

C#

```
See GetStretchRatio, SetStretchRatio
```

Property Value

A LayoutGroup item's stretch ratio.

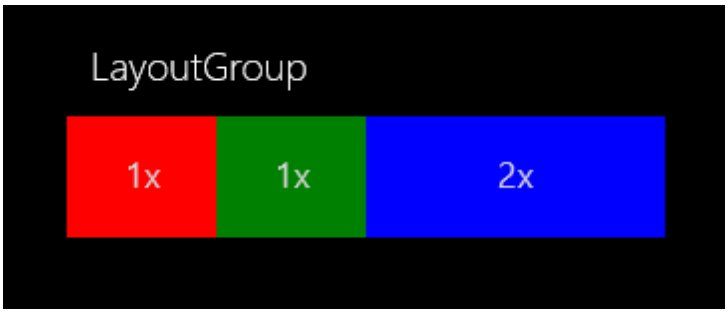
Remarks

Items within a LayoutGroup are either stretched or auto-sized, according to the LayoutGroupBase.HorizontalItemSizeMode, LayoutGroupBase.VerticalItemSizeMode, LayoutItem.SizeMode and SizeMode properties.

When items are stretched, each of them occupies a portion of the available space specified by the **StretchRatio** property. The total length of the available space is the sum of the ratios of the stretched items within the group.

Example

This example sets the StretchRatio property for three items within a group. The items are resized according to the assigned values:



Xaml

```
xmlns:dxLayout="using:DevExpress.UI.Xaml.Layout"
<dxLayout:LayoutControl Width="300" Height="200">
    <dxLayout:LayoutGroup Header="LayoutGroup" Height="125" HorizontalItemSizeMode="Stretch">
        <Border Background="Red" dxLayout:LayoutGroup.StretchRatio="1">
            <TextBlock FontSize="18" Foreground="LightGray" Text="1x" VerticalAlignment="Center" Horizonta
        </Border>
        <Border Background="Green" dxLayout:LayoutGroup.StretchRatio="1">
            <TextBlock FontSize="18" Foreground="LightGray" Text="1x" VerticalAlignment="Center" Horizonta
        </Border>
        <Border Background="Blue" dxLayout:LayoutGroup.StretchRatio="2">
            <TextBlock FontSize="18" Foreground="LightGray" Text="2x" VerticalAlignment="Center" Horizonta
        </Border>
    </dxLayout:LayoutGroup>
</dxLayout:LayoutControl>
```

GetDesiredHeight Method

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic

```
static Public Function GetDesiredHeight(
   ByVal dObj As DependencyObject
) As Double
```

C#

```
public static Double GetDesiredHeight(
   DependencyObject dObj
)
```

Parameters
dObj

Return Value

GetDesiredWidth Method

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic

```
static Public Function GetDesiredWidth(
   ByVal dObj As DependencyObject
) As Double
```

C#

```
public static Double GetDesiredWidth(
   DependencyObject dObj
)
```

Parameters
dObj

Return Value

GetIndex Method

Gets the value of the Index attached property for a specific object.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
static Public Function GetIndex(
   ByVal dObj As DependencyObject
) As Integer
```

C#

```
public static int GetIndex(
   DependencyObject dObj
)
```

Parameters

dObj
An object whose value of the Index property is to be returned.

Return Value

The value of the Index property for a specific object.

GetSizeMode Method

Gets the value of the SizeMode attached property for a specific object.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic

```
static Public Function GetSizeMode(
   ByVal dObj As DependencyObject
) As ItemSizeMode
```

C#

```
public static ItemSizeMode GetSizeMode(
   DependencyObject dObj
)
```

Parameters
dObj
An object whose value of the SizeMode property is to be returned.

Return Value

The value of the SizeMode property for a specific object.

GetStretchRatio Method

Gets the value of the StretchRatio attached property for a specific object.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
static Public Function GetStretchRatio(
   ByVal dObj As DependencyObject
) As Double
```

C#

```
public static Double GetStretchRatio(
   DependencyObject dObj
)
```

Parameters

dObj
An object whose value of the StretchRatio property is to be returned.

Return Value

The value of the StretchRatio property for a specific object.

SetIndex Method

Sets the value of the Index attached property for a specific object.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic

```
static Public Sub SetIndex(
   ByVal dObj As DependencyObject,
   ByVal index As Integer
)
```

C#

```
public static void SetIndex(
   DependencyObject dObj,
   int index
)
```

Parameters
dObj
An object whose Index attached property is to be set.
index
A new value of the Index attached property for the specified object.

SetSizeMode Method

Sets the value of the StretchRatio attached property for a specific object.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
static Public Sub SetSizeMode(
   ByVal dObj As DependencyObject,
   ByVal strategy As ItemSizeMode
)
```
C#
```
public static void SetSizeMode(
   DependencyObject dObj,
   ItemSizeMode strategy
)
```

Parameters
dObj
An object whose StretchRatio attached property is to be set.
strategy
A new value of the StretchRatio attached property for the specified object.

SetStretchRatio Method

Sets the value of the StretchRatio attached property for a specific object.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
static Public Sub SetStretchRatio(
   ByVal dObj As DependencyObject,
   ByVal size As Double
)
```

C#

```
public static void SetStretchRatio(
   DependencyObject dObj,
   Double size
)
```

Parameters

dObj
An object whose StretchRatio attached property is to be set.
size
A new value of the StretchRatio attached property for the specified object.

LayoutItem Class

A control that consists of a header and content regions.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class LayoutItem Inherits LayoutAwareHeaderedContentContainer, IHeaderedElement,
  IItemSizeModeProvider
```

C#

```
public class LayoutItem : LayoutAwareHeaderedContentContainer, IHeaderedElement,
  IItemSizeModeProvider
```

Remarks

Visually a LayoutItem consists of a header and content regions that can be specified via the inherited **Header** and **Content** properties.

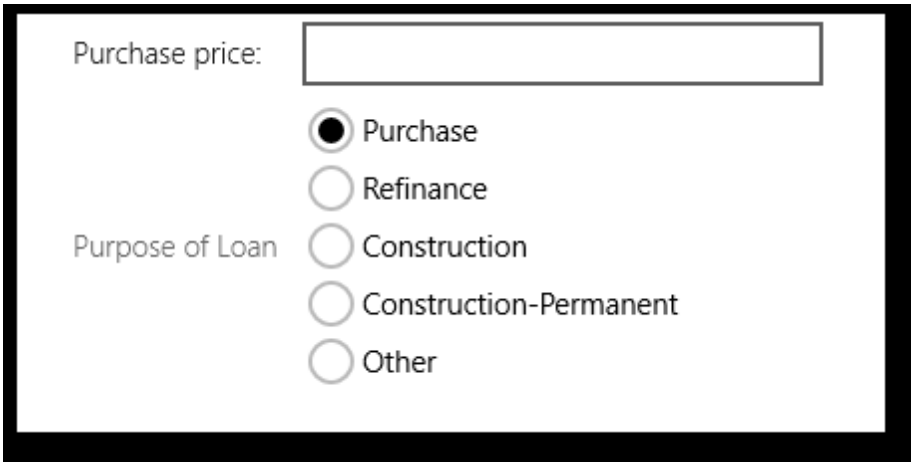
You can place any control as the item's content, and if required, visualize it using the corresponding template. When declaring a LayoutItem object in XAML, any object defined between the LayoutItem start and end tags is used to initialize the **Content** property.

Typically, LayoutItem objects are used as elements of a LayoutControl and LayoutGroups. When they are used this way, the content regions of LayoutItems are aligned according to the items' headers. This feature is controlled by the LayoutGroupBase.ItemHeadersAlignment properties of the LayoutControl and LayoutGroups where the items reside and by the HeaderAlignment properties of the items themselves.

To specify the position of the item's header relative to the content region, use the HeaderPosition property.

Example

The following XAML code creates a LayoutControl with two LayoutItems. The first item displays a text editor, while the second item displays a group of radio buttons:



Xaml

LayoutItem Members

A control that consists of a header and content regions.

The following tables list the members exposed by the LayoutItem type.

Public Constructors

	Name	Description
	LayoutItem	Initializes a new instance of the LayoutItem class.

Public Properties

	Name	Description
	ActualContentIndent	Gets the actual space between an item's header and content.
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualViewState	(Inherited from **DevExpress.UI.Xaml.Layout.LayoutAwareHeaderedContentContainer**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowHeaderHighlighting	
	AllowHeaderHighligting	Obsolete. Gets or sets whether an item's header is highlighted (painted bold) when the item's content is focused.
	AllowHeaderTextContentVerticalCorrection	Gets or sets whether the item's header position is adjusted by a few pixels so that the header is lined up with the

© 2018 Developer Express Inc.

		text of the editor displayed in the content region.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

LayoutItem Constructor

Initializes a new instance of the LayoutItem class.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public LayoutItem()
```

LayoutItem Properties

A control that consists of a header and content regions.

The following tables list the members exposed by the LayoutItem type.

Public Constructors

	Name	Description
	LayoutItem	Initializes a new instance of the LayoutItem class.

Public Properties

	Name	Description
	ActualContentIndent	Gets the actual space between an item's header and content.
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualViewState	(Inherited from **DevExpress.UI.Xaml.Layout.LayoutAwareHeaderedContentContainer**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowHeaderHighlighting	
	AllowHeaderHighligting	Obsolete. Gets or sets whether an item's header is highlighted (painted bold) when the item's content is focused.
	AllowHeaderTextContentVerticalCorrection	Gets or sets whether the item's header position is adjusted by a few pixels so that the header is lined up with the

© 2018 Developer Express Inc.

		text of the editor displayed in the content region.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)

		not empty. (Inherited from **veHeaderedContentControl**)
	HasHeaderTemplate	Gets whether the veHeaderedContentControl.HeaderTemplate is not empty. (Inherited from **veHeaderedContentControl**)
	Header	Gets or sets the control's header. (Inherited from **veHeaderedContentControl**)
	HeaderAlignment	Gets or sets whether the item's content is aligned according to the group's LayoutGroupBase.ItemHeadersAlignment option.
	HeaderPosition	Gets or sets the position of the item's header.
	HeaderStringFormat	Gets or sets a composite format string for the veHeaderedContentControl.Header object. (Inherited from **veHeaderedContentControl**)
	HeaderStyle	Gets or sets the style applied to the container's header. (Inherited from **HeaderedContentContainer**)
	HeaderTemplate	Gets or sets the template used to render the veHeaderedContentControl.Header object. (Inherited from **veHeaderedContentControl**)
	HeaderTemplateSelector	Gets or sets an object that chooses a header template based on custom logic. (Inherited from **veHeaderedContentControl**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	HorizontalContentIndent	Gets or sets the space between the item's header and content when the content and header are horizontally lined up.
	HorizontalHeaderAlignment	Gets or sets the horizontal alignment of the container's header. (Inherited from **HeaderedContentContainer**)
	IsContentEnabled	Gets whether the control placed as the item's content is enabled.
	IsContentFocused	Gets whether the control placed as the item's content is focused.
	IsDisposing	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControlBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsHeaderVisible	Gets whether the item's header is visible.
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHorizontal	Gets whether the item's header is displayed at the left of the item's content.
	IsLoaded	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControl**)
	IsRequired	Gets whether the current item's header is painted semi-bold, indicating to an end-user that the current field is required.
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

ActualContentIndent Property

Gets the actual space between an item's header and content.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualContentIndent As Double
```

C#

```
public Double ActualContentIndent { get; }
```

Property Value

The actual space between an item's header and content.

Remarks

The **ActualContentIndent** property returns the actual space between an item's header and content, taking into account the item's orientation and default indents. To specify the space between an item's header and content, use the HorizontalContentIndent and VerticalContentIndent properties.

AllowHeaderHighlighting Property

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Property AllowHeaderHighlighting As Boolean
```
C#
```
public bool AllowHeaderHighlighting { get; set; }
```

Property Value

See Also

AllowHeaderHighligting Property

NOTE: This member is now obsolete.

'AllowHeaderHighligting' is obsolete. Use 'AllowHeaderHighlighting' instead.

Gets or sets whether an item's header is highlighted (painted bold) when the item's content is focused.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowHeaderHighligting As Boolean
```

C#

```
public bool AllowHeaderHighligting { get; set; }
```

Property Value

true if an item's header is highlighted (painted bold) when the item's content is focused; otherwise, **false**.

Remarks

By default, the **AllowHeaderHighligting** property is set to **true**. Set the property to **false** to prevent highlighting the header.

AllowHeaderTextContentVerticalCorrection Property

Gets or sets whether the item's header position is adjusted by a few pixels so that the header is lined up with the text of the editor displayed in the content region.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowHeaderTextContentVerticalCorrection As Boolean
```

C#

```
public bool AllowHeaderTextContentVerticalCorrection { get; set; }
```

Property Value

true, to line up the item's header and text in the edit box; otherwise, **false**.

HeaderAlignment Property

Gets or sets whether the item's content is aligned according to the group's LayoutGroupBase.ItemHeadersAlignment option.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderAlignment As HeaderAlignment
```

C#

```
public HeaderAlignment HeaderAlignment { get; set; }
```

Property Value

The HeaderAlignment value that specifies if the item's content is aligned according to the group's alignment setting.

Remarks

By default, LayoutItems placed into a LayoutGroup are aligned by their headers according to the group's LayoutGroupBase.ItemHeadersAlignment property. You can set the **HeaderAlignment** property to **None** to auto-size this item's header and to ignore this item while calculating header alignment of other items.

HeaderPosition Property

Gets or sets the position of the item's header.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderPosition As HeaderPosition
```

C#

```
public HeaderPosition HeaderPosition { get; set; }
```

Property Value

The position of the item's header.

Remarks

You can use the **HeaderPosition** property to position the header above or to the left of the item's content.

HorizontalContentIndent Property

Gets or sets the space between the item's header and content when the content and header are horizontally lined up.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HorizontalContentIndent As Double
```

C#

```
public Double HorizontalContentIndent { get; set; }
```

Property Value

The horizontal space between the item's header and content.

IsContentEnabled Property

Gets whether the control placed as the item's content is enabled.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsContentEnabled As Boolean
```

C#

```
public bool IsContentEnabled { get; }
```

Property Value

true if the control placed as the item's content is enabled; otherwise, **false**.

See Also

LayoutItem Class
LayoutItem Members

IsContentFocused Property

Gets whether the control placed as the item's content is focused.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsContentFocused As Boolean
```

C#

```
public bool IsContentFocused { get; }
```

Property Value

true, if the control placed as the item's content is focused; otherwise, **false**.

See Also

LayoutItem Class
LayoutItem Members

IsHeaderVisible Property

Gets whether the item's header is visible.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsHeaderVisible As Boolean
```

C#

```
public bool IsHeaderVisible { get; }
```

Property Value

true, if the item's header is visible; otherwise, **false**.

Remarks

Use the ShowHeader property to specify the visibility of the item's header.

ShowHeader

© 2018 Developer Express Inc.

IsHorizontal Property

Gets whether the item's header is displayed at the left of the item's content.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsHorizontal As Boolean
```

C#

```
public bool IsHorizontal { get; }
```

Property Value

true if the item's header is displayed at the left of the item's content; otherwise, **false**.

IsRequired Property

Gets whether the current item's header is painted semi-bold, indicating to an end-user that the current field is required.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsRequired As Boolean
```

C#

```
public bool IsRequired { get; }
```

Property Value

true, if the current item's header is painted semi-bold, indicating to an end-user that the current field is required; otherwise, **false**.

Remarks

The **IsRequired** property is read-only. Use the Required property to change the corresponding setting.

Required

© 2018 Developer Express Inc.

Required Property

Gets or sets whether the current item's header is painted semi-bold, indicating to an end-user that the current field is required.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Required As Boolean
```

C#

```
public bool Required { get; set; }
```

Property Value

true, if the current item's header is painted semi-bold, indicating to an end-user that the current field is required; otherwise, **false**.

ShowHeader Property

Gets or sets whether the item's header is visible.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowHeader As DefaultBoolean
```

C#

```
public DefaultBoolean ShowHeader { get; set; }
```

Property Value

A DefaultBoolean value that specifies whether the item's header is visible.

Remarks

If the **ShowHeader** property is set to Default or True, the item's header (veHeaderedContentControl.Header) is visible. Otherwise, the header is hidden.

SizeMode Property

Gets or sets how the current item is resized.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SizeMode As ItemSizeMode
```

C#

```
public ItemSizeMode SizeMode { get; set; }
```

Property Value

An ItemSizeMode that specifies how the current item is resized.

Remarks

By default, layout items are resized according to the LayoutGroupBase.HorizontalItemSizeMode and LayoutGroupBase.VerticalItemSizeMode properties of the group where the items reside. The **LayoutItem.SizeMode** property allows you to specify the size mode for individual LayoutItems, overriding the default size mode imposed by the group's settings.

To specify a size mode for a LayoutGroup's items that are not of the LayoutItem type, use the LayoutGroup.SizeMode attached property.

VerticalContentIndent Property

Gets or sets the space between the item's header and content when the content and header are vertically lined up.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property VerticalContentIndent As Double
```

C#

```
public Double VerticalContentIndent { get; set; }
```

Property Value

The vertical space between the item's header and content.

LayoutOrientation Enumeration

Enumerates values that specify how LayoutItems are arranged within a LayoutGroup.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Enum LayoutOrientation
```
C#
```
public enum LayoutOrientation
```

Members

Name	Description
Default	Vertical arrangement of items in the snapped app state. Horizontal arrangement of items in other app states.
Horizontal	Horizontal arrangement of items.
Vertical	Vertical arrangement of items.

Remarks

Use the LayoutGroupBase.Orientation and LayoutGroupBase.PortraitOrientation properties to specify how LayoutItems are arranged within a LayoutGroup.

MasterDetailPageContent Class

Allows you to implement the Master-Detail Pattern.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class MasterDetailPageContent Inherits ContentControl, INestedGoBackListener
```

C#

```
public class MasterDetailPageContent : ContentControl, INestedGoBackListener
```

Remarks

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T578750.

This example illustrates how to create a basic application that uses the Master-Detail Pattern based on the MVVM design pattern.

MasterDetailPageContent Members

Allows you to implement the Master-Detail Pattern.

The following tables list the members exposed by the MasterDetailPageContent type.

Public Constructors

	Name	Description
	MasterDetailPageContent	Initializes a new instance of the MasterDetailPageContent class.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowBackButton	
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AlwaysShowContentPaneInSideBySideState	
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Content	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplate	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateRoot	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateSelector	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateSelectorProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)

© 2018 Developer Express Inc.

	ContentTransitions	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTransitionsProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	EnableAdaptiveLayout	Gets or sets whether to enable the adaptive layout behavior.
	EnableSplitter	Gets or sets whether to enable the splitter that allows end-users to change the relative width of the master and content areas. This is a dependency property.
	ExtendSplitterAreaForTouch	
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsContentPaneVisible	Gets or sets whether the content pane is visible.
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MasterPane	Gets or sets the control used as the master pane content.
	MasterPaneBackground	Gets or sets the brush used to paint the background of the master pane.
	MasterPaneMaxWidthInSideBySideState	Gets or sets the maximum width, in pixels, of the master pane in the SideBySide display mode.
	MasterPaneMinWidthInSideBySideState	Gets or sets the minimum width, in pixels, of the master pane in the SideBySide display mode.
	MasterPaneWidthInSideBySideState	Gets or sets the current width, in pixels, of the master pane in the SideBySide display mode.
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

MasterDetailPageContent Constructor

Initializes a new instance of the MasterDetailPageContent class.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public MasterDetailPageContent()
```

MasterDetailPageContent Properties

Allows you to implement the Master-Detail Pattern.

The following tables list the members exposed by the MasterDetailPageContent type.

Public Constructors

	Name	Description
	MasterDetailPageContent	Initializes a new instance of the MasterDetailPageContent class.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowBackButton	
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AlwaysShowContentPaneInSideBySideState	
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Content	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplate	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateRoot	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateSelector	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateSelectorProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)

AllowBackButton Property

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Property AllowBackButton As Boolean
```
C#
```
public bool AllowBackButton { get; set; }
```

Property Value

AlwaysShowContentPaneInSideBySideState Property

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Property AlwaysShowContentPaneInSideBySideState As Boolean
```
C#
```
public bool AlwaysShowContentPaneInSideBySideState { get; set; }
```

Property Value

See Also

EnableAdaptiveLayout Property

Gets or sets whether to enable the adaptive layout behavior.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property EnableAdaptiveLayout As Boolean
```

C#

```
public bool EnableAdaptiveLayout { get; set; }
```

Property Value

true to enable the adaptive layout behavior; otherwise, **false**.

Remarks

The Master-Detail Pattern is able to automatically change its display mode based on its current width. This behavior is regulated by the **EnableAdaptiveLayout** property.

The StackedStateThreshold property specifies the width, in pixels, at which the **Stacked** display mode is automatically enabled. The current display mode is specified by the ViewState property.

EnableSplitter Property

Gets or sets whether to enable the splitter that allows end-users to change the relative width of the master and content areas. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property EnableSplitter As Boolean
```

C#

```
public bool EnableSplitter { get; set; }
```

Property Value

true, to display the splitter; otherwise, **false**.

Remarks

The splitter can only be shown if the ViewState property is set to **SideBySide**.

The MasterPaneMinWidthInSideBySideState and MasterPaneMaxWidthInSideBySideState properties specify the limits within which end-users can resize the master and content areas. The MasterPaneWidthInSideBySideState property specifies the current width of the master pane.

IsContentPaneVisible Property

Gets or sets whether the content pane is visible.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IsContentPaneVisible As Boolean
```

C#

```
public bool IsContentPaneVisible { get; set; }
```

Property Value

true, if the content pane is currently visible; otherwise, **false**.

MasterPane Property

Gets or sets the control used as the master pane content.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property MasterPane As UIElement
```

C#

```
public UIElement MasterPane { get; set; }
```

Property Value

A UIElement object that specifies the control used as the master pane content.

MasterPaneBackground Property

Gets or sets the brush used to paint the background of the master pane.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property MasterPaneBackground As Brush
```

C#

```
public Brush MasterPaneBackground { get; set; }
```

Property Value

A Windows.UI.Xaml.Media.Brush value.

MasterPaneMaxWidthInSideBySideState Property

Gets or sets the maximum width, in pixels, of the master pane in the SideBySide display mode.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property MasterPaneMaxWidthInSideBySideState As Double
```

C#

```
public Double MasterPaneMaxWidthInSideBySideState { get; set; }
```

Property Value

A double value that specifies the maximum width, in pixels, of the master pane in the SideBySide display mode.

Remarks

If the EnableSplitter property is set to **true**, end-users can change the relative width of the master and content areas. The MasterPaneMinWidthInSideBySideState and **MasterPaneMaxWidthInSideBySideState** properties specify the limits within which end-users can resize these areas. The MasterPaneWidthInSideBySideState property specifies the current width of the master pane.

If the ViewState propery is set to MasterDetailPageContentViewState.Stacked, the **MasterPaneMaxWidthInSideBySideState** property is not in effect.

MasterPaneMinWidthInSideBySideState Property

Gets or sets the minimum width, in pixels, of the master pane in the SideBySide display mode.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property MasterPaneMinWidthInSideBySideState As Double
```

C#

```
public Double MasterPaneMinWidthInSideBySideState { get; set; }
```

Property Value

A double value that specifies the minimum width, in pixels, of the master pane in the SideBySide display mode.

Remarks

If the EnableSplitter property is set to **true**, end-users can change the relative width of the master and content areas. The **MasterPaneMinWidthInSideBySideState** and MasterPaneMaxWidthInSideBySideState properties specify the limits within which end-users can resize these areas. The MasterPaneWidthInSideBySideState property specifies the current width of the master pane.

If the ViewState propery is set to MasterDetailPageContentViewState.Stacked, the **MasterPaneMinWidthInSideBySideState** property is not in effect.

MasterPaneWidthInSideBySideState Property

Gets or sets the current width, in pixels, of the master pane in the SideBySide display mode.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property MasterPaneWidthInSideBySideState As Double
```

C#

```
public Double MasterPaneWidthInSideBySideState { get; set; }
```

Property Value

A double value that specifies the current width, in pixels, of the master pane in the SideBySide display mode.

Remarks

If the EnableSplitter property is set to **true**, end-users can change the relative width of the master and content areas. The MasterPaneMinWidthInSideBySideState and MasterPaneMaxWidthInSideBySideState properties specify the limits within which end-users can resize these areas. The **MasterPaneWidthInSideBySideState** property specifies the current width of the master pane.

If the ViewState propery is set to MasterDetailPageContentViewState.Stacked, the **MasterPaneWidthInSideBySideState** property is not in effect.

ShowContentPaneCommand Property

Returns a command that shows the content pane.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ShowContentPaneCommand As ICommand
```

C#

```
public ICommand ShowContentPaneCommand { get; }
```

Property Value

A System.Windows.Input.ICommand object.

SplitterMode Property

Gets or sets the splitter's display mode.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SplitterMode As MasterDetailPageContentSplitterMode
```

C#

```
public MasterDetailPageContentSplitterMode SplitterMode { get; set; }
```

Property Value

A MasterDetailPageContentSplitterMode enumeration value.

StackedStateThreshold Property

Gets or sets the width, in pixels, at which the Master-Detail Pattern is automatically displayed in the Stacked state.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property StackedStateThreshold As Double
```

C#

```
public Double StackedStateThreshold { get; set; }
```

Property Value

A double value that specifies the width, in pixels, at which the Stacked state is automatically enabled.

Remarks

The ThresholdMode property specifies whether the stacked state threshold is the total width or the width of the detail pane contents.

The **StackedStateThreshold** property is only in effect if the EnableAdaptiveLayout property is set to **true**.

ThresholdMode Property

Gets or sets whether the stacked state threshold is the total width of master and content panes or the width of the content pane.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ThresholdMode As MasterDetailPageContentThresholdMode
```

C#

```
public MasterDetailPageContentThresholdMode ThresholdMode { get; set; }
```

Property Value

A MasterDetailPageContentThresholdMode enumeration value.

Remarks

The StackedStateThreshold property specifies the width, in pixels, at which the Master-Detail Pattern is automatically displayed in the Stacked state.

The **ThresholdMode** property is only in effect if the EnableAdaptiveLayout property is set to **true**.

ViewState Property

Gets or sets the current display mode.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ViewState As MasterDetailPageContentViewState
```

C#

```
public MasterDetailPageContentViewState ViewState { get; set; }
```

Property Value

A MasterDetailPageContentViewState enumeration value.

Remarks

The Master-Detail Pattern is able to automatically change its display mode based on its current width. This behavior is regulated by the EnableAdaptiveLayout property.

The StackedStateThreshold property specifies the width, in pixels, at which the **Stacked** display mode is automatically enabled.

MasterDetailPageContentSplitterMode Enumeration

Lists values that specify the visual representation of the splitter.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Enum MasterDetailPageContentSplitterMode
```

C#

```
public enum MasterDetailPageContentSplitterMode
```

Members

Name	Description
OverlayHidden	The splitter does not have a visual representation.
OverlayVisible	The splitter is represented by a grey bar when hovered.

Remarks

Values listed by this enumeration are used to set the value of the MasterDetailPageContent.SplitterMode property.

MasterDetailPageContentThresholdMode Enumeration

Lists values that specify whether the stacked state threshold is the total width of master and content panes or the width of the content pane.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Enum MasterDetailPageContentThresholdMode
```

C#

```
public enum MasterDetailPageContentThresholdMode
```

Members

Name	Description
Content	The stacked state threshold is the width of the content pane.
Self	The stacked state threshold is the total width of master and content panes.

Remarks

Values listed by this enumeration are used to set the value of the MasterDetailPageContent.ThresholdMode property.

MasterDetailPageContentViewState Enumeration

Lists values that specify the current display mode.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Enum MasterDetailPageContentViewState
```

C#

```
public enum MasterDetailPageContentViewState
```

Members

Name	Description
SideBySide	Both the master and detail panes are shown simultaneously.
Stacked	The master pane takes all the available space. When a selection is made, the detail pane gets all the available space.

Remarks

Values listed by this enumeration are used to set the value of the MasterDetailPageContent.ViewState property.

TabbedContainer Class

Presents items as tab pages with tab headers displayed at the top.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
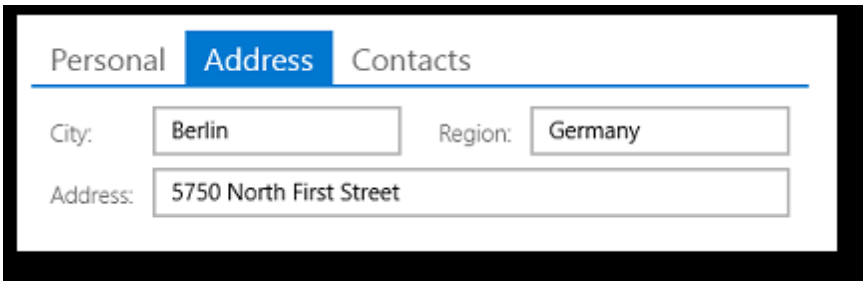
Public Class TabbedContainer Inherits ContentSelectorContainer
```

C#

```
public class TabbedContainer : ContentSelectorContainer
```

Remarks

The **TabbedContainer** displays its elements (TabbedContainerItem objects) as tab pages. The **TabbedContainerItem.Header** property allows you to specify a tab header for each page.



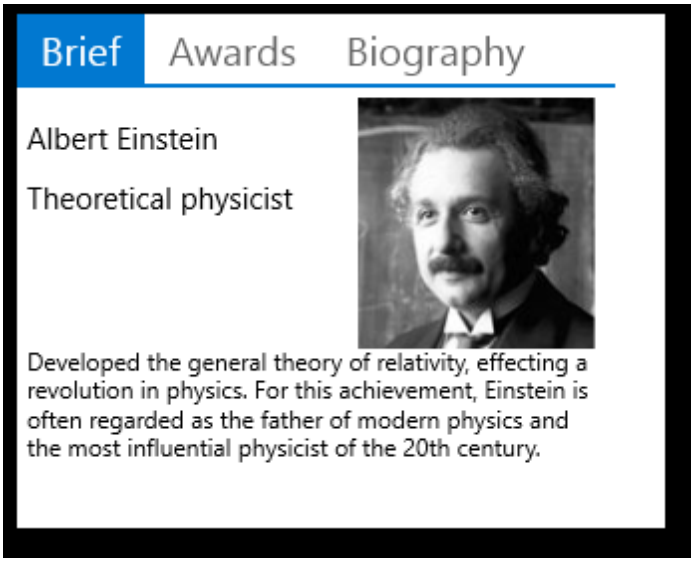
In code, you can switch between tab pages via the veSelector.SelectedIndex inherited property. The currently selected item is specified by the veSelector.SelectedItem property.

Items can also be populated via the **ItemsSource** inherited property. To render these items, use the following templates and template selectors:

- **ItemTemplate** and **ItemTemplateSelector** properties - Specify templates used to render item headers.
- **ContentTemplate** and **ContentTemplateSelector** properties - Specify templates used to render item content.

Example

This example creates a TabbedContainer with three tabs, each of which displays custom controls:



Xaml

TabbedContainer Constructor

Initializes a new instance of the TabbedContainer class.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public TabbedContainer()
```

TabbedContainerItem Class

An item within the TabbedContainer control.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class TabbedContainerItem Inherits ContentSelectorContainerItem
```

C#

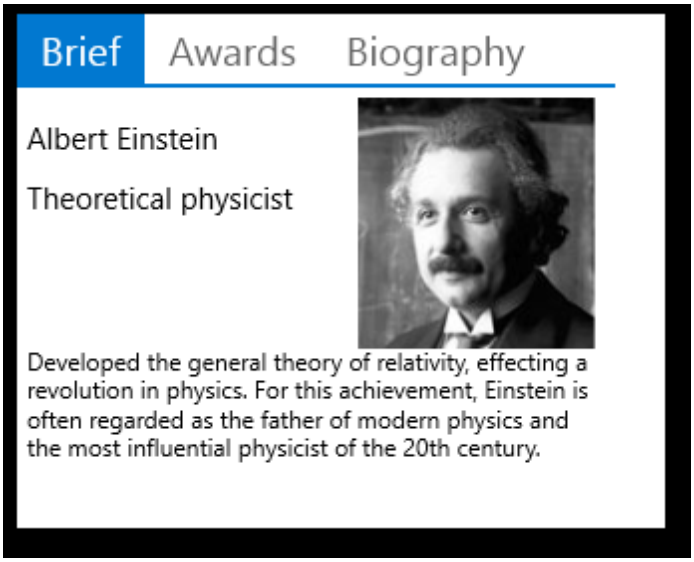
```
public class TabbedContainerItem : ContentSelectorContainerItem
```

Remarks

Use the **Header** inherited property to specify an object to be displayed in a tab.

Example

This example creates a TabbedContainer with three tabs, each of which displays custom controls:



Xaml

TabbedContainerItem Members

An item within the TabbedContainer control.

The following tables list the members exposed by the TabbedContainerItem type.

Public Constructors

	Name	Description
	TabbedContainerItem	Initializes a new instance of the TabbedContainerItem class.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

TabbedContainerItem Constructor

Initializes a new instance of the TabbedContainerItem class.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public TabbedContainerItem()
```

Tile Class

Represent a simple tile that can display a notification header, can be checked and selected.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class Tile Inherits TileBase
```

C#

```
public class Tile : TileBase
```

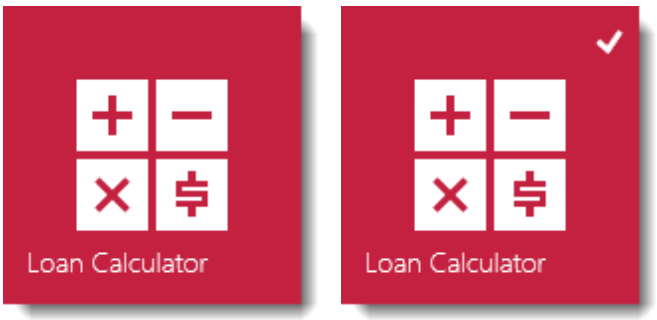
Remarks

The Tile control represents a tile that, in addition to the header (see veHeaderedContentControl.Header), can display the notification header, check mark and selection frame. To specify the notification header, use the TileBase.NotificationHeader property. The notification header can be aligned relative to the tile using the TileBase.HorizontalNotificationHeaderAlignment and TileBase.VerticalNotificationHeaderAlignment properties.

The TileBase.NotificationHeaderStyle, TileBase.NotificationHeaderTemplate and TileBase.NotificationHeaderTemplateSelector properties provides the notification header styling and templating functionality.

The figure below shows a sample Tile control that displays a content, header and notification header.

If the TileBase.AllowCheck property is set to **True**, the tile can be checked when right tapped/clicked (or tapped/clicked). The TileBase.CheckMode property specifies the touch gesture used to change the tile check state. To respond to changing the check state, handle the TileBase.CheckedChanged event. The following figure shows the same tile displayed in the unchecked and checked states.



If the TileBase.AllowSelection property is set to **True**, the tile displays the selection frame when the TileBase.Selected property equals **True**. In this state, the tile is displayed enclosed with a frame, whose color and thickness can be specified by the TileBase.SelectionFrameBrush and TileBase.SelectionFrameThickness properties. See the sample below.

© 2018 Developer Express Inc.

The following code snippet shows how to create a simple tile with the slide animation effect.

C#

```
xmlns:Layout="using:DevExpress.UI.Xaml.Layout"
<Layout:Tile Header="Beverages" AllowCheck="True" Checked="True" Background="Orchid" CheckMode="Tap">
    <StackPanel>
        <StackPanel.Resources>
            <Style TargetType="TextBlock">
                <Setter Property="FontSize" Value="24"/>
                <Setter Property="HorizontalAlignment" Value="Center"/>
            </Style>
        </StackPanel.Resources>
        <TextBlock Text="Soft Drinks:"/>
        <Layout:SlideDecorator Orientation="Horizontal">
            <TextBlock Text="Coffee"/>
            <TextBlock Text="Ice Tea"/>
            <TextBlock Text="Juice"/>
        </Layout:SlideDecorator>
    </StackPanel>
</Layout:Tile>
```

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T283589.

This example demonstrates how to create tiles with various animation effects: flip, swing, slide and mosaic.

Tile Members

Represent a simple tile that can display a notification header, can be checked and selected.

The following tables list the members exposed by the Tile type.

Public Constructors

	Name	Description
	Tile	Initializes a new instance of the Tile class with the default settings.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualNotificationHeader	Gets the actual notification header. This is a dependency property. (Inherited from **TileBase**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowCheck	Gets or sets whether the Tile can be displayed in the checked state. This is a dependency property. (Inherited from **TileBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowHover	Gets or sets whether the Tile can be displayed in the hovered state. This is a dependency property. (Inherited from **TileBase**)
	AllowSelection	Gets or sets whether the Tile can be displayed in the selected state. This is a dependency property. (Inherited from **TileBase**)

© 2018 Developer Express Inc.

	AnimationInterval	Gets or sets the amount of time between tile flips. This is a dependency property.
	BackContent	Gets or sets the content displayed on the tile back side, which is visible when the tile is flipped. This is a dependency property.
	BackContentTemplate	Gets or sets the DataTemplate used to render the back side content of the current tile. This is a dependency property.
	BackContentTemplateSelector	Gets or sets the DataTemplateSelector that returns a DataTemplate used to render the back side content of the current tile. This is a dependency property.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	Checked	Gets or sets whether the Tile is checked. This is a dependency property. (Inherited from **TileBase**)
	CheckMarkStyle	Gets or sets the style applied to the check mark displayed in the Tile in the checked state. This is a dependency property. (Inherited from **TileBase**)
	CheckMode	Gets or sets the touch gesture used to check and uncheck the Tile. This is a dependency property. (Inherited from **TileBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Command	Gets or sets the command associated with the Tile. This is a dependency property. (Inherited from **TileBase**)
	CommandParameter	Gets or sets the parameter passed to the command associated with the Tile. This is a dependency property. (Inherited from **TileBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Content	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplate	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateRoot	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateSelector	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)

	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HasContent	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControl**)
	HasHeader	Gets whether the control's veHeaderedContentControl.Header is not empty. (Inherited from **veHeaderedContentControl**)
	HasHeaderTemplate	Gets whether the veHeaderedContentControl.HeaderTemplate is not empty. (Inherited from **veHeaderedContentControl**)
	HasNotificationHeader	Gets whether the TileBase.NotificationHeader property is not empty. This is a dependency property. (Inherited from **TileBase**)
	HasNotificationHeaderTemplate	(Inherited from **TileBase**)
	Header	Gets or sets the control's header. (Inherited from **veHeaderedContentControl**)
	HeaderStringFormat	Gets or sets a composite format string for the veHeaderedContentControl.Header object. (Inherited from **veHeaderedContentControl**)
	HeaderStyle	Gets or sets the style applied to the container's header. (Inherited from **HeaderedContentContainer**)

© 2018 Developer Express Inc.

	HeaderTemplate	Gets or sets the template used to render the veHeaderedContentControl.Header object. (Inherited from **veHeaderedContentControl**)
	HeaderTemplateSelector	Gets or sets an object that chooses a header template based on custom logic. (Inherited from **veHeaderedContentControl**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalHeaderAlignment	Gets or sets the horizontal alignment of the container's header. (Inherited from **HeaderedContentContainer**)
	HorizontalNotificationHeaderAlignment	Gets or sets the horizontal alignment of the TileBase.NotificationHeader relative to the Tile. This is a dependency property. (Inherited from **TileBase**)
	HoverFrameBrush	Gets or sets the Brush object used to paint the frame enclosing the Tile when it is hovered over with the mouse pointer. This is a dependency property. (Inherited from **TileBase**)
	IsChecked	Gets whether the Tile is actually checked. This is a dependency property. (Inherited from **TileBase**)
	IsCheckMarkVisible	Gets whether the check mark is actually visible. This is a dependency property. (Inherited from **TileBase**)
	IsDisposing	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControlBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)

Tile Constructor

Initializes a new instance of the Tile class with the default settings.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public Tile()
```

Tile Properties

Represent a simple tile that can display a notification header, can be checked and selected.

The following tables list the members exposed by the Tile type.

Public Constructors

	Name	Description
	Tile	Initializes a new instance of the Tile class with the default settings.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualNotificationHeader	Gets the actual notification header. This is a dependency property. (Inherited from **TileBase**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowCheck	Gets or sets whether the Tile can be displayed in the checked state. This is a dependency property. (Inherited from **TileBase**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowHover	Gets or sets whether the Tile can be displayed in the hovered state. This is a dependency property. (Inherited from **TileBase**)
	AllowSelection	Gets or sets whether the Tile can be displayed in the selected state. This is a dependency property. (Inherited from **TileBase**)

© 2018 Developer Express Inc.

	AnimationInterval	Gets or sets the amount of time between tile flips. This is a dependency property.
	BackContent	Gets or sets the content displayed on the tile back side, which is visible when the tile is flipped. This is a dependency property.
	BackContentTemplate	Gets or sets the DataTemplate used to render the back side content of the current tile. This is a dependency property.
	BackContentTemplateSelector	Gets or sets the DataTemplateSelector that returns a DataTemplate used to render the back side content of the current tile. This is a dependency property.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	Checked	Gets or sets whether the Tile is checked. This is a dependency property. (Inherited from **TileBase**)
	CheckMarkStyle	Gets or sets the style applied to the check mark displayed in the Tile in the checked state. This is a dependency property. (Inherited from **TileBase**)
	CheckMode	Gets or sets the touch gesture used to check and uncheck the Tile. This is a dependency property. (Inherited from **TileBase**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Command	Gets or sets the command associated with the Tile. This is a dependency property. (Inherited from **TileBase**)
	CommandParameter	Gets or sets the parameter passed to the command associated with the Tile. This is a dependency property. (Inherited from **TileBase**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Content	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplate	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateRoot	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateSelector	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateSelectorProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTransitions	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)

© 2018 Developer Express Inc.

	ContentTransitionsProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

© 2018 Developer Express Inc.

		)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HasContent	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControl**)
	HasHeader	Gets whether the control's veHeaderedContentControl.Header is not empty. (Inherited from **veHeaderedContentControl**)
	HasHeaderTemplate	Gets whether the veHeaderedContentControl.HeaderTemplate is not empty. (Inherited from **veHeaderedContentControl**)
	HasNotificationHeader	Gets whether the TileBase.NotificationHeader property is not empty. This is a dependency property. (Inherited from **TileBase**)
	HasNotificationHeaderTemplate	(Inherited from **TileBase**)
	Header	Gets or sets the control's header. (Inherited from **veHeaderedContentControl**)
	HeaderStringFormat	Gets or sets a composite format string for the veHeaderedContentControl.Header object. (Inherited from **veHeaderedContentControl**)
	HeaderStyle	Gets or sets the style applied to the container's header. (Inherited from **HeaderedContentContainer**)

© 2018 Developer Express Inc.

	HeaderTemplate	Gets or sets the template used to render the veHeaderedContentControl.Header object. (Inherited from **veHeaderedContentControl**)
	HeaderTemplateSelector	Gets or sets an object that chooses a header template based on custom logic. (Inherited from **veHeaderedContentControl**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalHeaderAlignment	Gets or sets the horizontal alignment of the container's header. (Inherited from **HeaderedContentContainer**)
	HorizontalNotificationHeaderAlignment	Gets or sets the horizontal alignment of the TileBase.NotificationHeader relative to the Tile. This is a dependency property. (Inherited from **TileBase**)
	HoverFrameBrush	Gets or sets the Brush object used to paint the frame enclosing the Tile when it is hovered over with the mouse pointer. This is a dependency property. (Inherited from **TileBase**)
	IsChecked	Gets whether the Tile is actually checked. This is a dependency property. (Inherited from **TileBase**)
	IsCheckMarkVisible	Gets whether the check mark is actually visible. This is a dependency property. (Inherited from **TileBase**)
	IsDisposing	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControlBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoverFrameVisible	Gets whether the frame indicating that the Tile is hovered over with the mouse pointer is actually visible. This is a dependency property. (Inherited from **TileBase**)
	IsLoaded	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControl**)
	IsNotificationHeaderVisible	Gets whether the notification header is actually visible. This is a dependency property. (Inherited from **TileBase**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsSelected	Gets whether the Tile is actually selected. This is a dependency property. (Inherited from **TileBase**)
	IsSelectionFrameVisible	Gets whether the selection frame is actually visible. This is a dependency property. (Inherited from **TileBase**)
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

AnimationInterval Property

Gets or sets the amount of time between tile flips. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property AnimationInterval As TimeSpan
```

C#

```
public TimeSpan AnimationInterval { get; set; }
```

Property Value

A TimeSpan structure that specifies the amount of time between tile flips. The default is 5 seconds.

Remarks

If the tile's back side content is specified using the BackContent property, the tile automatically flips from side to side. The **AnimationInterval** property allows you to set the amount of time between tile flips.

The code snippet below show how to set the flip interval to 10 seconds.

Xaml

```
<Layout:HubTile Content="Tile" BackContent="Back" AnimationInterval="0:0:10"/>
```

BackContent Property

Gets or sets the content displayed on the tile back side, which is visible when the tile is flipped. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property BackContent As Object
```

C#

```
public object BackContent { get; set; }
```

Property Value

An Object that is the content displayed on the back side of the current tile.

Remarks

Use the **BackContent** property to specify the content for the tile's back side. The BackContentTemplate and BackContentTemplateSelector properties allow you to provide a DataTemplate used to render this content.

BackContentTemplate Property

Gets or sets the DataTemplate used to render the back side content of the current tile. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property BackContentTemplate As DataTemplate
```

C#

```
public DataTemplate BackContentTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that defines the presentation of the back side content of the current tile.

BackContentTemplateSelector Property

Gets or sets the DataTemplateSelector that returns a DataTemplate used to render the back side content of the current tile. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property BackContentTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector BackContentTemplateSelector { get; set; }
```

Property Value

A DataTemplateSelector that returns a DataTemplate used to render the back side content of the current tile.

OnBackContentTemplateChanged Method

This member supports the internal infrastructure, and is not intended to be used directly from your code.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Sub OnBackContentTemplateChanged(
   ByVal oldValue As DataTemplate,
   ByVal newValue As DataTemplate
)
```

C#

```
public void OnBackContentTemplateChanged(
   DataTemplate oldValue,
   DataTemplate newValue
)
```

Parameters

oldValue

newValue

TileBase Members

The base class for tiles.

The following tables list the members exposed by the TileBase type.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualNotificationHeader	Gets the actual notification header. This is a dependency property.
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowCheck	Gets or sets whether the Tile can be displayed in the checked state. This is a dependency property.
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowHover	Gets or sets whether the Tile can be displayed in the hovered state. This is a dependency property.
	AllowSelection	Gets or sets whether the Tile can be displayed in the selected state. This is a dependency property.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Checked	Gets or sets whether the Tile is checked. This is a dependency property.
	CheckMarkStyle	Gets or sets the style applied to the check mark displayed in the Tile in the checked state. This is a dependency property.
	CheckMode	Gets or sets the touch gesture used to check and uncheck the Tile. This is a dependency property.
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Command	Gets or sets the command associated with the Tile. This is a dependency property.
	CommandParameter	Gets or sets the parameter passed to the command associated with the Tile. This is a dependency property.
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Content	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplate	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)

	HasContent	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControl**)
	HasHeader	Gets whether the control's veHeaderedContentControl.Header is not empty. (Inherited from **veHeaderedContentControl**)
	HasHeaderTemplate	Gets whether the veHeaderedContentControl.HeaderTemplate is not empty. (Inherited from **veHeaderedContentControl**)
	HasNotificationHeader	Gets whether the NotificationHeader property is not empty. This is a dependency property.
	HasNotificationHeaderTemplate	
	Header	Gets or sets the control's header. (Inherited from **veHeaderedContentControl**)
	HeaderStringFormat	Gets or sets a composite format string for the veHeaderedContentControl.Header object. (Inherited from **veHeaderedContentControl**)
	HeaderStyle	Gets or sets the style applied to the container's header. (Inherited from **HeaderedContentContainer**)
	HeaderTemplate	Gets or sets the template used to render the veHeaderedContentControl.Header object. (Inherited from **veHeaderedContentControl**)
	HeaderTemplateSelector	Gets or sets an object that chooses a header template based on custom logic. (Inherited from **veHeaderedContentControl**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HorizontalHeaderAlignment	Gets or sets the horizontal alignment of the container's header. (Inherited from **HeaderedContentContainer**)
	HorizontalNotificationHeaderAlignment	Gets or sets the horizontal alignment of the NotificationHeader relative to the Tile. This is a dependency property.
	HoverFrameBrush	Gets or sets the Brush object used to paint the frame enclosing the Tile when it is hovered over with the mouse pointer. This is a dependency property.
	IsChecked	Gets whether the Tile is actually checked. This is a dependency property.
	IsCheckMarkVisible	Gets whether the check mark is actually visible. This is a dependency property.
	IsDisposing	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControlBase**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoverFrameVisible	Gets whether the frame indicating that the Tile is hovered over with the mouse pointer is actually visible. This is a dependency property.
	IsLoaded	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControl**)
	IsNotificationHeaderVisible	Gets whether the notification header is actually visible. This is a dependency

	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	NavigationTargetParameter	Gets or sets the parameter to be passed to the target page, invoked when tapping/clicking the Tile. This is a dependency property.
	NavigationTargetType	Allows you to specify the name of the Page class to be opened when an end-user taps/clicks the Tile. This is a dependency property.

© 2018 Developer Express Inc.

	NotificationHeader	Gets or sets the notification header displayed in the Tile. This is a dependency property.
	NotificationHeaderStringFormat	Gets or sets the composite format string for the NotificationHeader object. This is a dependency property.
	NotificationHeaderStyle	Gets or sets the style applied to the tile's notification header. This is a dependency property.
	NotificationHeaderTemplate	Gets or sets the template used to render the NotificationHeader object. This is a dependency property.
	NotificationHeaderTemplateSelector	Gets or sets an object that chooses a template used to render the NotificationHeader object based on custom logic. This is a dependency property.
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)

		be used directly from your code.
S	CheckedStates	This member supports the internal infrastructure, and is not intended to be used directly from your code.
S	CheckMarkStyleProperty	Identifies the CheckMarkStyle dependency property.
S	CheckModeProperty	Identifies the CheckMode dependency property.
S	CommandParameterProperty	Identifies the CommandParameter dependency property.
S	CommandProperty	Identifies the Command dependency property.
S	HasContentProperty	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControl**)
S	HasHeaderProperty	Identifies the HasHeader dependency property. (Inherited from **veHeaderedContentControl**)
S	HasHeaderTemplateProperty	Identifies the HasHeaderTemplate dependency property. (Inherited from **veHeaderedContentControl**)
S	HasNotificationHeaderProperty	Identifies the HasNotificationHeader dependency property.
S	HasNotificationHeaderTemplateProperty	Identifies the HasNotificationHeaderTemplate dependency property.
S	HeaderProperty	Identifies the Header dependency property. (Inherited from **veHeaderedContentControl**)
S	HeaderStringFormatProperty	Identifies the HeaderStringFormat dependency property. (Inherited from **veHeaderedContentControl**)
S	HeaderStyleProperty	Identifies the HeaderStyle dependency property. (Inherited from **HeaderedContentContainer**)
S	HeaderTemplateProperty	Identifies the HeaderTemplate dependency property. (Inherited from **veHeaderedContentControl**)
S	HeaderTemplateSelectorProperty	Identifies the HeaderTemplateSelector dependency property. (Inherited from **veHeaderedContentControl**)
S	HorizontalHeaderAlignmentProperty	Identifies the HorizontalHeaderAlignment dependency property. (Inherited from **HeaderedContentContainer**)
S	HorizontalNotificationHeaderAlignmentProperty	Identifies the HorizontalNotificationHeaderAlignment dependency property.
S	HoverFrameBrushProperty	Identifies the HoverFrameBrush dependency property.

© 2018 Developer Express Inc.

S	IsCheckedProperty	Identifies the IsChecked dependency property.
S	IsCheckMarkVisibleProperty	Identifies the IsCheckMarkVisible dependency property.
S	IsHoverFrameVisibleProperty	Identifies the IsHoverFrameVisible dependency property.
S	IsNotificationHeaderVisibleProperty	Identifies the IsNotificationHeaderVisible dependency property.
S	IsSelectedProperty	Identifies the IsSelected dependency property.
S	IsSelectionFrameVisibleProperty	Identifies the IsSelectionFrameVisible dependency property.
S	NavigationTargetParameterProperty	Identifies the NavigationTargetParameter dependency property.
S	NavigationTargetTypeProperty	Identifies the NavigationTargetType dependency property.
S	NotificationHeaderProperty	Identifies the NotificationHeader dependency property.
S	NotificationHeaderStringFormatProperty	Identifies the NotificationHeaderStringFormat dependency property.
S	NotificationHeaderStyleProperty	Identifies the NotificationHeaderStyle dependency property.
S	NotificationHeaderTemplateProperty	Identifies the NotificationHeaderTemplate dependency property.
S	NotificationHeaderTemplateSelectorProperty	Identifies the NotificationHeaderTemplateSelector dependency property.
S	SelectedProperty	Identifies the Selected dependency property.
S	SelectedState	This member supports the internal infrastructure, and is not intended to be used directly from your code.
S	SelectedStates	This member supports the internal infrastructure, and is not intended to be used directly from your code.
S	SelectionFrameBrushProperty	Identifies the SelectionFrameBrush dependency property.
S	SelectionFrameThicknessProperty	Identifies the SelectionFrameThickness dependency property.
S	ShowNotificationHeaderProperty	Identifies the ShowNotificationHeader dependency property.
S	SizeProperty	Identifies the Size dependency property.

© 2018 Developer Express Inc.

TileBase Properties

The base class for tiles.

The following tables list the members exposed by the TileBase type.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualNotificationHeader	Gets the actual notification header. This is a dependency property.
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowCheck	Gets or sets whether the Tile can be displayed in the checked state. This is a dependency property.
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowHover	Gets or sets whether the Tile can be displayed in the hovered state. This is a dependency property.
	AllowSelection	Gets or sets whether the Tile can be displayed in the selected state. This is a dependency property.
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Checked	Gets or sets whether the Tile is checked. This is a dependency property.
	CheckMarkStyle	Gets or sets the style applied to the check mark displayed in the Tile in the checked state. This is a dependency property.
	CheckMode	Gets or sets the touch gesture used to check and uncheck the Tile. This is a dependency property.
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Command	Gets or sets the command associated with the Tile. This is a dependency property.
	CommandParameter	Gets or sets the parameter passed to the command associated with the Tile. This is a dependency property.
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Content	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplate	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateRoot	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateSelector	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateSelectorProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTransitions	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTransitionsProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	HasContent	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veContentControl**)
	HasHeader	Gets whether the control's veHeaderedContentControl.Header is not empty. (Inherited from **veHeaderedContentControl**)
	HasHeaderTemplate	Gets whether the veHeaderedContentControl.HeaderTemplate is not empty. (Inherited from **veHeaderedContentControl**)
	HasNotificationHeader	Gets whether the NotificationHeader property is not empty. This is a dependency property.
	HasNotificationHeaderTemplate	
	Header	Gets or sets the control's header. (Inherited from **veHeaderedContentControl**)
	HeaderStringFormat	Gets or sets a composite format string for the veHeaderedContentControl.Header object. (Inherited from **veHeaderedContentControl**)
	HeaderStyle	Gets or sets the style applied to the container's header. (Inherited from **HeaderedContentContainer**)
	HeaderTemplate	Gets or sets the template used to render the veHeaderedContentControl.Header object. (Inherited from **veHeaderedContentControl**)
	HeaderTemplateSelector	Gets or sets an object that chooses a header template based on custom logic. (Inherited from **veHeaderedContentControl**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

ActualNotificationHeader Property

Gets the actual notification header. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualNotificationHeader As Object
```

C#

```
public object ActualNotificationHeader { get; }
```

Property Value

An Object that specifies the actual notification header.

Remarks

The **ActualNotificationHeader** property returns the actual notification header specified by the NotificationHeader property and formatted using the composite format string specified by the NotificationHeaderStringFormat property.

AllowCheck Property

Gets or sets whether the Tile can be displayed in the checked state. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowCheck As DefaultBoolean
```

C#

```
public DefaultBoolean AllowCheck { get; set; }
```

Property Value

A DefaultBoolean enumeration value that specifies whether the Tile can be displayed in the checked state. The default is **Default**.

Remarks

If the **AllowCheck** property is set to **Default** or **False**, the Tile cannot be displayed in the checked state (see Checked). Set the **AllowCheck** property to **True** to enable the checked state.

AllowHover Property

Gets or sets whether the Tile can be displayed in the hovered state. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowHover As DefaultBoolean
```

C#

```
public DefaultBoolean AllowHover { get; set; }
```

Property Value

A DefaultBoolean enumeration value that specifies whether the Tile can be displayed in the hovered state. The default is **Default**.

Remarks

If the **AllowHover** property is set to **Default** or **True**, the Tile is displayed enclosed by a frame when hovered over with the mouse pointer. Set the **AllowHover** property to **False** to prevent this.

AllowSelection Property

Gets or sets whether the Tile can be displayed in the selected state. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property AllowSelection As DefaultBoolean
```

C#

```
public DefaultBoolean AllowSelection { get; set; }
```

Property Value

A DefaultBoolean enumeration value that specifies whether the Tile can be displayed in the selected state. The default is **Default**.

Remarks

If the **AllowSelection** property is set to **Default** or **False**, the Tile cannot be displayed in the selected state (see Selected). Set the **AllowSelection** property to **True** to enable the selected state.

Checked Property

Gets or sets whether the Tile is checked. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Checked As Boolean
```

C#

```
public bool Checked { get; set; }
```

Property Value

true, if the Tile is in the checked state; otherwise, **false**. The default is **false**.

Remarks

If the AllowCheck property is set to **True**, a Tile can be in the checked state. When the Tile is checked (the **Checked** property is set to **true**), it displays a check mark, as demonstrated below.

By default, the tick symbol is used to indicate checked Tiles. You can override the default check mark using the CheckMarkStyle property.

At runtime, end-users can change the check state by tapping/clicking Tiles. To specify how a Tile can be checked/unchecked, use the CheckMode property.

If the AllowCheck property is set to **Default** or **False**, the Tile is not displayed in the checked state even if the **Checked** property is set to **True**. To get whether the Tile is actually displayed checked, read the IsChecked property.

To respond to changing the check state, handle the CheckedChanged event. This event fires when the IsChecked property value changes.

CheckMarkStyle Property

Gets or sets the style applied to the check mark displayed in the Tile in the checked state. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property CheckMarkStyle As Style
```

C#

```
public Style CheckMarkStyle { get; set; }
```

Property Value

A Style object applied to the check mark displayed in the Tile in the checked state.

Remarks

Target type: **DevExpress.UI.Xaml.Layout.TileCheck**.

CheckMode Property

Gets or sets the touch gesture used to check and uncheck the Tile. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property CheckMode As CheckMode
```

C#

```
public CheckMode CheckMode { get; set; }
```

Property Value

A CheckMode enumeration value that specifies the touch gesture used to check and uncheck the Tile. The default is **Default**.

Remarks

The **CheckMode** property specifies the touch gesture with which an end-user can check and uncheck the Tile. The **CheckMode** enumeration provides the following values:

- **Default** — the default value that is equivalent to the **RightTap** value;
- **RightTap** — the check state is changed when the Tile is right tapped or right clicked;
- **Tap** — the check state is changed when the Tile is tapped or clicked.

Command Property

Gets or sets the command associated with the Tile. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Command As ICommand
```

C#

```
public ICommand Command { get; set; }
```

Property Value

An object implementing the System.Windows.Input.ICommand interface that represents a command associated with the Tile.

Remarks

To pass a parameter to the command, use the CommandParameter property.

CommandParameter Property

Gets or sets the parameter passed to the command associated with the Tile. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property CommandParameter As Object
```

C#

```
public object CommandParameter { get; set; }
```

Property Value

An Object that represents a parameter to pass to the command.

Remarks

To associate a command with the Tile, use the Command property.

HasNotificationHeader Property

Gets whether the NotificationHeader property is not empty. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property HasNotificationHeader As Boolean
```

C#

```
public bool HasNotificationHeader { get; }
```

Property Value

true, if the NotificationHeader property is not empty; otherwise, **false**.

HorizontalNotificationHeaderAlignment Property

Gets or sets the horizontal alignment of the NotificationHeader relative to the Tile. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HorizontalNotificationHeaderAlignment As HorizontalAlignment
```

C#

```
public HorizontalAlignment HorizontalNotificationHeaderAlignment { get; set; }
```

Property Value

A HorizontalAlignment enumeration value that specifies the horizontal alignment of the notification header relative to the Tile.

HoverFrameBrush Property

Gets or sets the Brush object used to paint the frame enclosing the Tile when it is hovered over with the mouse pointer. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HoverFrameBrush As Brush
```

C#

```
public Brush HoverFrameBrush { get; set; }
```

Property Value

A **Windows.UI.Xaml.Media.Brush** object used to paint the frame enclosing the Tile when it is hovered over with the mouse pointer.

Remarks

If the AllowHover property is set to **Default** or **True**, the Tile is displayed enclosed in a frame when hovered over with the mouse pointer. The **HoverFrameBrush** property allows you to specify the **Brush** object used to paint the frame. You can also use the SelectionFrameThickness property to specify the thickness of the frame displayed in the selected and hovered states.

IsChecked Property

Gets whether the Tile is actually checked. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsChecked As Boolean
```

C#

```
public bool IsChecked { get; }
```

Property Value

true, if the Tile is checked; otherwise, **false**.

Remarks

If the AllowCheck property is set to **True**, the Tile can be displayed in the checked state (see Checked). If the AllowCheck property is set to **Default** or **False**, the Tile is not displayed checked even if the Checked property equals **true**. The **IsChecked** property returns whether the Tile is actually displayed in the checked state.

When the **IsChecked** property value changes, the CheckedChanged event is raised.

IsCheckMarkVisible Property

Gets whether the check mark is actually visible. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsCheckMarkVisible As Boolean
```

C#

```
public bool IsCheckMarkVisible { get; }
```

Property Value

true, if the check mark is actually visible; otherwise, **false**.

IsHoverFrameVisible Property

Gets whether the frame indicating that the Tile is hovered over with the mouse pointer is actually visible. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsHoverFrameVisible As Boolean
```

C#

```
public bool IsHoverFrameVisible { get; }
```

Property Value

true, if the frame indicating that the Tile is hovered over with the mouse pointer is actually visible; otherwise, **false**.

IsNotificationHeaderVisible Property

Gets whether the notification header is actually visible. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsNotificationHeaderVisible As Boolean
```

C#

```
public bool IsNotificationHeaderVisible { get; }
```

Property Value

true, if the notification header is actually visible; otherwise, **false**.

IsSelected Property

Gets whether the Tile is actually selected. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsSelected As Boolean
```

C#

```
public bool IsSelected { get; }
```

Property Value

true, if the Tile is actually selected; otherwise, **false**.

Remarks

If the AllowSelection property is set to **True**, the Tile can be selected (see Selected). If the AllowSelection property is set to **Default** or **False**, the Tile is not displayed selected even if the Selected property equals **True**. The **IsSelected** property returns whether the Tile is actually displayed in the selected state.

When the **IsSelected** property value changes, the SelectionChanged event is raised.

IsSelectionFrameVisible Property

Gets whether the selection frame is actually visible. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsSelectionFrameVisible As Boolean
```

C#

```
public bool IsSelectionFrameVisible { get; }
```

Property Value

true, if the selection frame is actually visible; otherwise, **false**.

NavigationTargetParameter Property

Gets or sets the parameter to be passed to the target page, invoked when tapping/clicking the Tile. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property NavigationTargetParameter As Object
```

C#

```
public object NavigationTargetParameter { get; set; }
```

Property Value

A parameter to be passed to the page specified by the NavigationTargetType property, which is invoked on tapping/clicking the Tile.

Remarks

You can interpret the parameter passed to a page by overriding the page's **OnNavigatedTo** method.

See Also

TileBase Class
TileBase Members
DevExpress.UI.Xaml.Layout Namespace
NavigationTargetType

© 2018 Developer Express Inc.

NavigationTargetType Property

Allows you to specify the name of the Page class to be opened when an end-user taps/clicks the Tile. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property NavigationTargetType As String
```

C#

```
public string NavigationTargetType { get; set; }
```

Property Value

A String value that specifies the name of the Page class to be opened when an end-user taps/clicks the Tile.

Remarks

The **NavigationTargetType** property specifies the name of the Page class to be opened when an end-user clicks the Tile.

For the **NavigationTargetType** property to work, perform the following modifications in the App.xaml.cs (.vb) file.

1. Change the type of the *rootFrame* object from the **Frame** class to the **DevExpress.UI.Xaml.Layout.DXFrame** class.
2. Initialize the *rootFrame* object as follows:

C#

```
using DevExpress.UI.Xaml.Layout;
// Create a Frame to act as the navigation context and navigate to the first page
rootFrame = new DXFrame() { NavigationTypeProvider = new NavigationTypeProvider() };
```

3. Declare the NavigationTypeProvider class as shown in the code below:

C#

```
using System.Reflection;
public class NavigationTypeProvider : TypeProviderBase {
    public override IEnumerable<System.Reflection.Assembly> Assemblies {
        get {
            yield return typeof(App).GetTypeInfo().Assembly;
        }
    }
}
```

NotificationHeader Property

Gets or sets the notification header displayed in the Tile. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property NotificationHeader As Object
```

C#

```
public object NotificationHeader { get; set; }
```

Property Value

An Object that specifies the notification header displayed in the Tile.

Remarks

Using the **NotificationHeader** property you can provide a notification header to be displayed in the Tile. The figure below shows Tiles that display notification headers.

By default, the notification header is aligned at the bottom right of the Tile. You can use the VerticalNotificationHeaderAlignment and HorizontalNotificationHeaderAlignment properties to customize the notification header alignment.

By default, if the **NotificationHeader** property is specified, the notification header is automatically displayed in the Tile. You can use the ShowNotificationHeader property to explicitly specify whether to display the notification header.

The NotificationHeaderTemplate, NotificationHeaderTemplateSelector and NotificationHeaderStyle properties provide the notification header templating and styling functionality.

You can also specify a format string used to used to render the notification header (see NotificationHeaderStringFormat).

NotificationHeaderStringFormat Property

Gets or sets the composite format string for the NotificationHeader object. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property NotificationHeaderStringFormat As String
```

C#

```
public string NotificationHeaderStringFormat { get; set; }
```

Property Value

A String value that specifies the composite format string for the notification header.

Remarks

The Composite Formatting feature is used to format the NotificationHeader object according to the **NotificationHeaderStringFormat**. Formatting is performed via the **String.Format** method.

See the Composite Formatting article in MSDN to learn about the formatting functionality.

NotificationHeaderStyle Property

Gets or sets the style applied to the tile's notification header. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property NotificationHeaderStyle As Style
```

C#

```
public Style NotificationHeaderStyle { get; set; }
```

Property Value

A Style object applied to the notification header displayed in the Tile.

Remarks

Target type: **DevExpress.UI.Xaml.Layout.TileBaseNotificationHeader**.

NotificationHeaderTemplate Property

Gets or sets the template used to render the NotificationHeader object. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property NotificationHeaderTemplate As DataTemplate
```

C#

```
public DataTemplate NotificationHeaderTemplate { get; set; }
```

Property Value

A DataTemplate used to render the NotificationHeader object.

Remarks

See the **Data Templating Overview** topic in MSDN to learn more.

See Also

NotificationHeaderTemplateSelector Property

Gets or sets an object that chooses a template used to render the NotificationHeader object based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property NotificationHeaderTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector NotificationHeaderTemplateSelector { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template used to render the NotificationHeader object based on custom logic.

Remarks

See the **Data Templating Overview** topic in MSDN to learn more.

Selected Property

Gets or sets whether the Tile is selected. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Selected As Boolean
```

C#

```
public bool Selected { get; set; }
```

Property Value

true, if the Tile is selected; otherwise, **false**. The default is **false**.

Remarks

If the AllowSelection property is set to **True**, the Tile can be selected. In this state, the Tile is rendered enclosed by a selection frame. To select the Tile, set the **Selected** property to **True**. In the following figures, you can see the same TileBase displayed in the normal and selected states, respectively.

You can specify the color and thickness of the selection frame using the SelectionFrameBrush and SelectionFrameThickness properties, respectively.

If the AllowSelection property is set to **Default** or **False**, the Tile is not displayed in the selected state even if the **Selected** property is set to **True**. To get whether the Tile is actually displayed selected, read the IsSelected property.

To respond to changing the selection state, handle the SelectionChanged event. This event fires when the IsSelected property value changes.

SelectionFrameBrush Property

Gets or sets the Brush object used to paint the selection frame. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectionFrameBrush As Brush
```

C#

```
public Brush SelectionFrameBrush { get; set; }
```

Property Value

A **Windows.UI.Xaml.Media.Brush** object that is used to paint the selection frame.

Remarks

If the Tile is selected, it is rendered enclosed by a frame. The **SelectionFrameBrush** property allows you to specify the Brush object used to paint the selection frame. You can also specify the frame thickness using the SelectionFrameThickness property.

SelectionFrameThickness Property

Gets or sets the thickness of the frame around the Tile displayed in the selected and hovered states.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectionFrameThickness As Thickness
```

C#

```
public Thickness SelectionFrameThickness { get; set; }
```

Property Value

A **Windows.UI.Xaml.Thickness** structure that describes the thickness of the frame around the Tile displayed in the selected and hovered states.

Remarks

If the Tile is selected or hovered over with the mouse pointer, it is rendered enclosed in a frame. The **SelectionFrameThickness** property allows you to specify the thickness of the frame. You can also use the SelectionFrameBrush and HoverFrameBrush properties to specify the Brush objects used to paint the corresponding frames.

ShowNotificationHeader Property

Gets or sets whether the NotificationHeader is displayed. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowNotificationHeader As DefaultBoolean
```

C#

```
public DefaultBoolean ShowNotificationHeader { get; set; }
```

Property Value

A DefaultBoolean enumeration value that specifies whether the notification header is displayed. The default is **Default**.

Remarks

If the **ShowNotificationHeader** property is set to **Default** or **True**, the notification header is displayed in the Tile. Set this property to **False** to prevent the notification header from being displayed.

Size Property

Gets or sets the size of the Tile. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Size As TileSize
```

C#

```
public TileSize Size { get; set; }
```

Property Value

A TileSize enumeration value that specifies the size of the Tile.

Remarks

The Size property allows you to specify the size of the Tile. The TileSize enumeration provides the following values:

- **Default** equivalent to the Medium value;
- **Medium** specifies a tile of 150x150 pixels;
- **Small** specifies a tile of 70x70 pixels;
- **Large** specifies a tile of 310x310 pixels;
- **Wide** specifies a tile of 310x150 pixels.

VerticalNotificationHeaderAlignment Property

Gets or sets the vertical alignment of the NotificationHeader relative to the Tile. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property VerticalNotificationHeaderAlignment As VerticalAlignment
```

C#

```
public VerticalAlignment VerticalNotificationHeaderAlignment { get; set; }
```

Property Value

A VerticalAlignment enumeration value that specifies the vertical alignment of the notification header relative to the Tile.

CheckedChanged Event

Fires when the IsChecked property value is changed.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
event Public CheckedChanged As EventHandler
```

C#

```
public event EventHandler CheckedChanged
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

ViewStateVisibility Enumeration

A set of flags that enumerate app states.

Namespace: DevExpress.UI.Xaml.Layout
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Enum ViewStateVisibility
```
C#
```
public enum ViewStateVisibility
```

Members

Name	Description
Default	The app state is specified by the LayoutAwareDecorator.DefaultViewStateVisibility property.
Filled	The current app's view has been reduced to a partial screen view as the result of another app snapping.
FullScreen	Either the FullScreenLandscape or FullScreenPortrait app state.
FullScreenLandscape	The current app's view is in full-screen (has no snapped app adjacent to it), and has changed to landscape orientation.
FullScreenPortrait	The current app's view is in full-screen (has no snapped app adjacent to it), and has changed to portrait orientation.
Snapped	The current app's view has been snapped.
Unsnapped	Either the FullScreenLandscape, FullScreenPortrait or Filled app state.

Remarks

Use the LayoutAwareDecorator.ViewStateVisibility attached property to specify the app state(s) in which an object will be visible when it is wrapped into a LayoutAwareDecorator.

LayoutGroupBase Members

The base class for controls arranging their items either horizontally or vertically and supporting various layout options.

The following tables list the members exposed by the LayoutGroupBase type.

Public Constructors

	Name	Description
	LayoutGroupBase	Initializes a new instance of the LayoutGroupBase class.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedItemsControl.Header via the veHeaderedItemsControl.HeaderStringFormat property. (Inherited from **veHeaderedItemsControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualViewState	(Inherited from **DevExpress.UI.Xaml.Layout.LayoutAwareHeaderedItemsContainer**)

LayoutGroupBase Constructor

Initializes a new instance of the LayoutGroupBase class.

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public LayoutGroupBase()
```

LayoutGroupBase Properties

The base class for controls arranging their items either horizontally or vertically and supporting various layout options.

The following tables list the members exposed by the LayoutGroupBase type.

Public Constructors

	Name	Description
	LayoutGroupBase	Initializes a new instance of the LayoutGroupBase class.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedItemsControl.Header via the veHeaderedItemsControl.HeaderStringFormat property. (Inherited from **veHeaderedItemsControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualViewState	(Inherited from **DevExpress.UI.Xaml.Layout.LayoutAwareHeaderedItemsContainer**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)

HorizontalItemSizeMode Property

Gets or sets the way items within the current group are resized when the items are horizontally aligned.

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HorizontalItemSizeMode As ItemSizeMode
```

C#

```
public ItemSizeMode HorizontalItemSizeMode { get; set; }
```

Property Value

An ItemSizeMode value that specifies how items within the current group are resized when the items are horizontally aligned.

Remarks

You can specify the size mode for individual LayoutItems, and as such override the **HorizontalItemSizeMode** property, via the LayoutItem.SizeMode property. To specify the size mode for other types of items within a group, use the LayoutGroup.SizeMode attached property.

HorizontalItemSpacing Property

Gets or sets the space between adjacent items when they are horizontally arranged within the group.

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HorizontalItemSpacing As Double
```

C#

```
public Double HorizontalItemSpacing { get; set; }
```

Property Value

A Double value that is the space between adjacent items when they are horizontally arranged.

IsAdaptive Property

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Property IsAdaptive As Boolean
```
C#
```
public bool IsAdaptive { get; set; }
```

Property Value

IsHeaderVisible Property

Gets whether the group's header is visible.

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsHeaderVisible As Boolean
```

C#

```
public bool IsHeaderVisible { get; }
```

Property Value

true, if the group's header is visible; otherwise, **false**.

Remarks

Use the ShowHeader property to specify the visibility of the group's header.

IsHorizontal Property

Gets whether items in the group are horizontally arranged.

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsHorizontal As Boolean
```

C#

```
public bool IsHorizontal { get; }
```

Property Value

true, if items in the group are horizontally arranged; otherwise, **false**.

Remarks

The Orientation and PortraitOrientation properties and device orientation are taken into account when calculating the **IsHorizontal** property value.

ItemHeadersAlignment Property

Gets or sets how LayoutItem headers are aligned within the current LayoutGroupBase object.

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemHeadersAlignment As HeadersAlignment
```

C#

```
public HeadersAlignment ItemHeadersAlignment { get; set; }
```

Property Value

A HeadersAlignment value that specifies how LayoutItem headers are aligned within the current LayoutGroupBase object.

Remarks

Use the **ItemHeadersAlignment** property to control how LayoutItem headers are aligned within a LayoutGroupBase object. To override this setting for individual items, use the LayoutItem.HeaderAlignment property.

Orientation Property

Gets or sets the arrangement of items within the group when the device is in landscape orientation.

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Orientation As LayoutOrientation
```

C#

```
public LayoutOrientation Orientation { get; set; }
```

Property Value

A LayoutOrientation value that is the arrangement of items within the group when the device is in landscape orientation.

PortraitOrientation

© 2018 Developer Express Inc.

PortraitOrientation Property

Gets or sets the arrangement of items within the group when the device is in portrait orientation.

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property PortraitOrientation As LayoutOrientation
```

C#

```
public LayoutOrientation PortraitOrientation { get; set; }
```

Property Value

A LayoutOrientation value that is the arrangement of items within the group when the device is in portrait orientation.

ShowHeader Property

Gets or sets whether the group's Header (specified by the veHeaderedItemsControl.Header inherited property) is visible.

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic
```
Public Property ShowHeader As DefaultBoolean
```
C#
```
public DefaultBoolean ShowHeader { get; set; }
```

Property Value

true, if the group's Header is visible; otherwise, **false**.

VerticalItemSizeMode Property

Gets or sets the way items within the current group are resized when the items are vertically aligned.

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property VerticalItemSizeMode As ItemSizeMode
```

C#

```
public ItemSizeMode VerticalItemSizeMode { get; set; }
```

Property Value

An ItemSizeMode value that specifies how items within the current group are resized when the items are vertically aligned.

Remarks

You can specify the size mode for individual LayoutItems, and as such override the **VerticalItemSizeMode** property, via the LayoutItem.SizeMode property. To specify a size mode for other types of items within a group, use the LayoutGroup.SizeMode attached property.

VerticalItemSpacing Property

Gets or sets the space between adjacent items when they are vertically arranged within the group.

Namespace: DevExpress.UI.Xaml.Layout.Base
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property VerticalItemSpacing As Double
```

C#

```
public Double VerticalItemSpacing { get; set; }
```

Property Value

A Double value that is the space between adjacent items when they are vertically arranged.

HamburgerMenuIconButton Constructor

Initializes a new instance of the HamburgerMenuIconButton class with the default settings.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public New()
```

C#

```
public HamburgerMenuIconButton()
```

Icon Property

Gets or sets the icon displayed by the button. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Icon As IconElement
```

C#

```
public IconElement Icon { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.IconElement object that represents the icon displayed by the button.

Remarks

You can use the following objects to specify the icon:

- **Windows.UI.Xaml.Controls.BitmapIcon**,
- **Windows.UI.Xaml.Controls.FontIcon**,
- **Windows.UI.Xaml.Controls.PathIcon**,
- **Windows.UI.Xaml.Controls.SymbolIcon**.

IconFill Property

Specifies the icon color. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IconFill As SolidColorBrush
```

C#

```
public SolidColorBrush IconFill { get; set; }
```

Property Value

A Windows.UI.Xaml.Media.SolidColorBrush object that defines the icon color.

IconHeight Property

Gets or sets the icon's height. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IconHeight As Double
```

C#

```
public Double IconHeight { get; set; }
```

Property Value

A System.Double value that is the icon's height.

Remarks

The size unit for the **IconHeight** property is specified by the IconSizeUnit property.

IconSizeUnit Property

Specifies whether the icon size is set in pixels or points. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IconSizeUnit As IconSizeUnit
```

C#

```
public IconSizeUnit IconSizeUnit { get; set; }
```

Property Value

An IconSizeUnit enumeration value.

IconSource Property

Gets or sets the source of the icon. This is a dependency property

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IconSource As Object
```

C#

```
public object IconSource { get; set; }
```

Property Value

An object that is the source of the icon.

IconStretch Property

Gets or sets the stretch mode for the icon. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IconStretch As Stretch
```

C#

```
public Stretch IconStretch { get; set; }
```

Property Value

A Windows.UI.Xaml.Media.Stretch enumeration value.

IconTemplate Property

Specifies the icon template. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IconTemplate As DataTemplate
```

C#

```
public DataTemplate IconTemplate { get; set; }
```

Property Value

A Windows.UI.Xaml.DataTemplate object that represents the icon template.

IconWidth Property

Gets or sets the icon's width. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property IconWidth As Double
```

C#

```
public Double IconWidth { get; set; }
```

Property Value

A System.Double value that is the icon's width.

Remarks

The size unit is specified by the IconSizeUnit property.

HamburgerMenuNavigationIconButton Constructor

Initializes a new instance of the HamburgerMenuNavigationIconButton class with the default settings.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public New()
```

C#

```
public HamburgerMenuNavigationIconButton()
```

HamburgerMenuNavigationIconButton Properties

Provides navigation options for menu items.

The following tables list the members exposed by the HamburgerMenuNavigationIconButton type.

Public Constructors

	Name	Description
	HamburgerMenuNavigationIconButton	Initializes a new instance of the HamburgerMenuNavigationIconButton class with the default settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

ClearNavigationHistory Property

Gets or sets whether clicking/tapping the button clears the menu's navigation history.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ClearNavigationHistory As Boolean
```

C#

```
public bool ClearNavigationHistory { get; set; }
```

Property Value

true to clear the navigation history when the end-user clicks/taps the button; otherwise, **false**.

NavigationTargetParameter Property

Gets or sets the parameter to be passed to the target page, invoked when tapping/clicking the menu item.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property NavigationTargetParameter As Object
```

C#

```
public object NavigationTargetParameter { get; set; }
```

Property Value

A parameter to be passed to the page specified by the NavigationTargetType or NavigationTargetTypeName property, which is invoked on tapping/clicking the menu item.

Remarks

You can interpret the parameter passed to a page by overriding the page's **OnNavigatedTo** method.

NavigationTargetType Property

Allows you to specify the Page class to be opened when an end-user taps/clicks the menu item.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property NavigationTargetType As Type
```

C#

```
public Type NavigationTargetType { get; set; }
```

Property Value

A System.Type value that specifies the Page class to be opened when an end-user taps/clicks the menu item.

NavigationTargetTypeName Property

Allows you to specify the name of the Page class to be opened when an end-user taps/clicks the menu item.

Namespace: DevExpress.UI.Xaml.Layout.Internal
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property NavigationTargetTypeName As String
```

C#

```
public string NavigationTargetTypeName { get; set; }
```

Property Value

A String value that specifies the name of the Page class to be opened when an end-user taps/clicks the menu item.

DevExpress.UI.Xaml.Layout.VisualElements

Contains classes that are ancestors of visual layout elements.

Classes

	Class	Description
	veContentSelector	The base class for containers capable of visualizing items' contents using templates.
	veHeaderedContentControl	The base class for headered controls displaying specific content.
	veHeaderedItemsControl	The base class for headered item containers.
	veSelector	The base class for containers that support item selection.
	veSelectorItem	An item within the veSelector control.

© 2018 Developer Express Inc.

veContentSelector Class

The base class for containers capable of visualizing items' contents using templates.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class veContentSelector Inherits veSelector, IContentSelector
```

C#

```
public abstract class veContentSelector : veSelector, IContentSelector
```

ContentTemplate Property

Gets or sets a template used to visualize an item's content.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ContentTemplate As DataTemplate
```

C#

```
public DataTemplate ContentTemplate { get; set; }
```

Property Value

A DataTemplate object used to visualize an item's content.

Remarks

See the **Data Templating Overview** topic in MSDN to learn more.

ContentTemplateSelector Property

Gets or sets an object that chooses an item content template based on custom logic.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property ContentTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ContentTemplateSelector { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

See the **Data Templating Overview** topic in MSDN to learn more.

SelectedContent Property

Gets the content of the currently selected item.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property SelectedContent As Object
```

C#

```
public object SelectedContent { get; }
```

Property Value

An object that is the selected item's content.

SelectedContentTemplate Property

Gets a template used to visualize the selected item's content.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property SelectedContentTemplate As DataTemplate
```

C#

```
public DataTemplate SelectedContentTemplate { get; }
```

Property Value

A DataTemplate object used to visualize the selected item's content.

Remarks

To specify a common content template for all items, use the ContentTemplate property. A content template can also be specified for individual items via their **ContentTemplate** properties, which if set, override the common content template. The **SelectedContentTemplate** returns the resulting content template calculated based on the ContentTemplate setting and the currently selected item's **ContentTemplate** property.

See the **Data Templating Overview** topic in MSDN to learn more.

SelectedContentTemplateSelector Property

Gets an object that chooses the selected item's content template based on custom logic.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property SelectedContentTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector SelectedContentTemplateSelector { get; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

To specify a common content template selector for all items, use the ContentTemplateSelector property. A content template selector can also be specified for individual items via their **ContentTemplateSelector** properties, which if set, override the common content template selector. The **SelectedContentTemplateSelector** returns the resulting content template selector calculated based on the ContentTemplateSelector setting and the currently selected item's **ContentTemplateSelector** property.

See the **Data Templating Overview** topic in MSDN to learn more.

Select Method

Selects the specified item.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax
Visual Basic

```
Public Sub Select(
   ByVal item As IContentSelectorItem
)
```

C#

```
public void Select(
   IContentSelectorItem item
)
```

Parameters
item
An item to be selected.

veHeaderedContentControl Members

The base class for headered controls displaying specific content.

The following tables list the members exposed by the veHeaderedContentControl type.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the Header via the HeaderStringFormat property.
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)

ActualHeader Property

Gets the control's actual header, taking into account the additional formatting applied to the Header via the HeaderStringFormat property.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualHeader As Object
```

C#

```
public object ActualHeader { get; }
```

Property Value

The control's actual header.

HasHeader Property

Gets whether the control's Header is not empty.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property HasHeader As Boolean
```

C#

```
public bool HasHeader { get; }
```

Property Value

true if the control's header is not empty; otherwise, **false**.

HasHeaderTemplate Property

Gets whether the HeaderTemplate is not empty.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property HasHeaderTemplate As Boolean
```

C#

```
public bool HasHeaderTemplate { get; }
```

Property Value

true if the HeaderTemplate is not empty; otherwise, **false**.

Header Property

Gets or sets the control's header.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Header As Object
```

C#

```
public object Header { get; set; }
```

Property Value

An object that is the control's header.

Remarks

To render the **Header** object in a specific manner, you can provide a template via the HeaderTemplate and HeaderTemplateSelector properties.

You can apply additional formatting to the **Header** object via the HeaderStringFormat property. In this case, to return the actual header text, use ActualHeader.

HeaderStringFormat Property

Gets or sets a composite format string for the Header object.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderStringFormat As String
```

C#

```
public string HeaderStringFormat { get; set; }
```

Property Value

A composite format string for the Header object

Remarks

The Composite Formatting feature is used to format the Header object according to the **HeaderStringFormat**. Formatting is performed via the **String.Format** method.

See the Composite Formatting article in MSDN to learn about the formatting functionality.

HeaderTemplate Property

Gets or sets the template used to render the Header object.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderTemplate As DataTemplate
```

C#

```
public DataTemplate HeaderTemplate { get; set; }
```

Property Value

The DataTemplate used to render the Header object.

Remarks

See the **Data Templating Overview** topic in MSDN to learn more.

HeaderTemplateSelector Property

Gets or sets an object that chooses a header template based on custom logic.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector HeaderTemplateSelector { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

See the **Data Templating Overview** topic in MSDN to learn more.

veHeaderedItemsControl Properties

The base class for headered item containers.

The following tables list the members exposed by the veHeaderedItemsControl type.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the Header via the HeaderStringFormat property.
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

	GroupStyle	(Inherited from **Windows.UI.Xaml.Controls.ItemsControl**)
	GroupStyleSelector	(Inherited from **Windows.UI.Xaml.Controls.ItemsControl**)
	GroupStyleSelectorProperty	(Inherited from **Windows.UI.Xaml.Controls.ItemsControl**)
	HasHeader	Gets whether the control's Header is not empty.
	HasHeaderTemplate	Gets whether the HeaderTemplate is not empty.
	HasItems	(Inherited from **DevExpress.UI.Xaml.Layout.VisualElements.veItemsControl**)
	Header	Gets or sets the control's header.
	HeaderStringFormat	Gets or sets a composite format string for the Header object.
	HeaderTemplate	Gets or sets the template used to render the Header object.
	HeaderTemplateSelector	Gets or sets an object that chooses a header template based on custom logic.
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

ActualHeader Property

Gets the control's actual header, taking into account the additional formatting applied to the Header via the HeaderStringFormat property.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualHeader As Object
```

C#

```
public object ActualHeader { get; }
```

Property Value

The control's actual header.

HasHeader Property

Gets whether the control's Header is not empty.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property HasHeader As Boolean
```

C#

```
public bool HasHeader { get; }
```

Property Value

true if the control's header is not empty; otherwise, **false**.

HasHeaderTemplate Property

Gets whether the HeaderTemplate is not empty.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property HasHeaderTemplate As Boolean
```

C#

```
public bool HasHeaderTemplate { get; }
```

Property Value

true if the HeaderTemplate is not empty; otherwise, **false**.

Header Property

Gets or sets the control's header.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property Header As Object
```

C#

```
public object Header { get; set; }
```

Property Value

An object that is the control's header.

Remarks

To render the **Header** object in a specific manner, you can provide a template via the HeaderTemplate and HeaderTemplateSelector properties.

You can apply additional formatting to the **Header** object via the HeaderStringFormat property. In this case, to return the actual header text, use ActualHeader.

HeaderStringFormat Property

Gets or sets a composite format string for the Header object.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderStringFormat As String
```

C#

```
public string HeaderStringFormat { get; set; }
```

Property Value

A composite format string for the Header object

Remarks

The Composite Formatting feature is used to format the Header object according to the **HeaderStringFormat**. Formatting is performed via the **String.Format** method.

See the Composite Formatting article in MSDN to learn about the formatting functionality.

HeaderTemplate Property

Gets or sets the template used to render the Header object.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderTemplate As DataTemplate
```

C#

```
public DataTemplate HeaderTemplate { get; set; }
```

Property Value

The DataTemplate used to render the Header object.

Remarks

See the **Data Templating Overview** topic in MSDN to learn more.

HeaderTemplateSelector Property

Gets or sets an object that chooses a header template based on custom logic.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector HeaderTemplateSelector { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

See the **Data Templating Overview** topic in MSDN to learn more.

veSelector Class

The base class for containers that support item selection.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Class veSelector Inherits veItemsControl, ISelector
```

C#

```
public abstract class veSelector : veItemsControl, ISelector
```

SelectedIndex Property

Gets or sets the index of the selected item.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedIndex As Integer
```

C#

```
public int SelectedIndex { get; set; }
```

Property Value

An integer value that is the zero-based index of the selected item.

SelectedItem Property

Gets or sets the selected item.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedItem As Object
```

C#

```
public object SelectedItem { get; set; }
```

Property Value

An object that is the selected item.

SelectionChanged Event

Fires when an item is selected.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
event Public SelectionChanged As SelectionChangedEventHandler
```

C#

```
public event SelectionChangedEventHandler SelectionChanged
```

Event Data

The event handler receives an argument of type Windows.UI.Xaml.Controls.SelectionChangedEventArgs containing data related to this event.

veSelectorItem Members

An item within the veSelector control.

The following tables list the members exposed by the veSelectorItem type.

Public Properties

	Name	Description
	ActualHeader	Gets the control's actual header, taking into account the additional formatting applied to the veHeaderedContentControl.Header via the veHeaderedContentControl.HeaderStringFormat property. (Inherited from **veHeaderedContentControl**)
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
S	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

IsSelected Property

Gets whether the item is selected.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsSelected As Boolean
```

C#

```
public bool IsSelected { get; }
```

Property Value

true, if the item is selected; otherwise, **false**.

Owner Property

Gets the item's owner.

Namespace: DevExpress.UI.Xaml.Layout.VisualElements
Assembly: DevExpress.UI.Xaml.Layout.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Owner As ISelector
```

C#

```
public ISelector Owner { get; }
```

Property Value

The item's owner.

DevExpress.Ui.Xaml.Map

Contains classes which implement the main functionality of the Map Control.

Classes

	Class	Description
	BingMapDataProvider	The class that loads map images from the Bing Maps data provider.
	BingMapTileSource	The class that implements loading image tiles from the **Bing Maps** data provider.
	CacheOptions	Contains settings that define parameters of a local cache to store image tiles.
	ChoroplethColorizer	Represents the Choropleth-like colorizer.
	ColorCollection	A collection of colors.
	ColorizerBase<T>	The base class for all colorizers.
	ColorizerRangeDistributionBase	The base for classes that define distribution of color ranges in a colorizer.
	ColorizerValueProviderBase	The base class for all colorizer value providers.
	ColorLegend	The base class for all color legends.
	ColorListLegend	A color legend represented as a list of colors.
	ColorScaleLegend	A color legend represented as a color scale.
	EllipticalMercatorProjection	A class that defines methods specific to the Elliptical Mercator Projection.
	EqualAreaProjection	A class that defines methods specific to the Equal Area Projection.
	EquationRangeDistribution	The base for classes that define exponential and logarithmic distribution of color ranges in a colorizer.
	EquirectangularProjection	A class that defines methods specific to the Equirectangular Projection.
	ExponentialRangeDistribution	Represents the exponential distribution of color ranges in a colorizer.
	GeoPoint	A geographical point on the map.
	GeoPointCollection	A collection of geo points.
	GraphColorizer	Represents the Graph colorizer that tries to paint shapes that have a common border using different colors.
	ImageTilesLayer	A layer that displays image tiles obtained from one of the supported map providers.

© 2018 Developer Express Inc.

	KmlReader	Provides functionality to load shape data from an external file in the KML format.
	LayerBase	Serves as the base class for all layers.
	LayerCollection	A collection of layers.
	LayerMapItemCollection	A collection of map items within a layer.
	LinearRangeDistribution	Represents the linear distribution of color ranges in a colorizer.
	LogarithmicRangeDistribution	Represents the logarithmic distribution of color ranges in a colorizer.
	MapColorizer	The base class for all colorizers that are used in a Map control.
	MapControl	A Map control to display raster and vector maps.
	MapCustomElement	The class used to draw any custom element on a map.
	MapDataProviderBase	The base class for all data providers.
	MapDependencyObject	Enables WinRT property system services for its derived model classes.
	MapDot	The class used to draw a dot on a map.
	MapElement	The base class for different map elements (e.g., layers).
	MapElementCollection<T>	A collection of map elements.
	MapEllipse	The class used to draw an ellipse on a map.
	MapFileReaderBase	The base for classes that provide functionality to load shape data from an external file.
	MapFileSourceBase	The base class for all file sources.
	MapHttpFileSource	Represents a source that loads a file using the Http URL.
	MapItem	The base class for different map items.
	MapItemAttribute	An attribute that can be applied to map items.
	MapItemAttributeCollection	A collection of attributes for an individual map item.
	MapItemCollection	A collection of map items.
	MapItemEventArgs	Provides data for the MapItemLoaded event.
	MapItemsLayerBase	The base class for layers that display map items.
	MapLine	The class used to draw a line on a map.
	MapPackageFileSource	Represents a source that loads a file from a package.

© 2018 Developer Express Inc.

	MapPath	The class used to draw a path on a map.
	MapPolygon	The class used to draw a polygon on a map.
	MapPolyline	The class used to draw a polyline on a map.
	MapPushpin	The class used to draw a pushpin on a map.
	MapRectangle	The class used to draw a rectangle on a map.
	MapShape	The class used to draw a shape on a map.
	MapStorageFileSource	Represents a source that loads a file from storage on a disk.
	MapTileSourceBase	The base for all classes that can load image tiles from external map data providers.
	MapVisualItem	The base class for visual map items.
	MillerProjection	A class that defines methods specific to the Miller Projection.
	MultiScaleTileSource	The class that provides functionality to load image tiles for different zoom scales from an external image tile source.
	NavigationPanelOptions	Contains options that define the appearance, position and layout of the Navigation Panel element.
	OpenStreetMapDataProvider	The class that loads map images from a web resource that provides data in the **OpenStreetMap** format.
	OpenStreetMapTileSource	The class that implements loading image tiles from the **OpenStreetMap** data provider.
	ProjectionBase	The base class for all projections used in the MapControl.
	ShapeAttributeValueProvider	The class that is used to obtain an attribute from a shape file source (Shapefile or KML file) that is applied to shape items.
	ShapefileReader	Provides functionality to load shape data from an external file in the Shapefiles format.
	SphericalMercatorProjection	A class that defines methods specific to the Spherical Mercator Projection.
	ToolTipInfo	Contains settings that define the appearance and behavior of built-in map tooltips.
	VectorFileLayer	A layer that displays vector elements loaded from a file (e.g., Shapefile or KML).
	VectorItemsLayer	A layer that displays a collection of vector elements.
	VectorLayer	The base class for layers that contain various vector elements (e.g., lines, circles, polygons, or elements loaded from shape data files).

© 2018 Developer Express Inc.

	ViewportChangedEventArgs	Provides data for the ViewportChanged event.

Interfaces

	Interface	Description
	IColorizerValueProvider	If implemented by a class, defines methods that provide values for a colorizer.

Structures

	Structure	Description
	MapUnit	A class that contains a location in internal map units.

Delegates

	Delegate	Description
	MapItemEventHandler	A method that will handle the MapItemLoaded event.
	ViewportChangedEventHandler	A method that will handle the ViewportChanged event.

Enumerations

	Enumeration	Description
	BingMapKind	Lists the values used to specify the kind of maps to be obtained from the BingMapDataProvider.
	MapDotShapeKind	Lists the values used to specify the shape of map dots.
	NavigationPanelLocation	Lists the values used to specify the location of a Navigation Panel.
	StorageFolderType	Lists the values used to specify the type of a folder to store map files (e.g., images or other resources).

© 2018 Developer Express Inc.

BingMapDataProvider Class

The class that loads map images from the Bing Maps data provider.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class BingMapDataProvider Inherits MapDataProviderBase
```

C#

```
public class BingMapDataProvider : MapDataProviderBase
```

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4321.

This lesson demonstrates how to create a simple map application which connects to the Bing Maps data provider.

Xaml

```
 (MainPage.xaml)
<Page
    xmlns="http://schemas.microsoft.com/winfx/2006/xaml/presentation"
    xmlns:x="http://schemas.microsoft.com/winfx/2006/xaml"
    xmlns:local="using:BingMapsLesson"
    xmlns:d="http://schemas.microsoft.com/expression/blend/2008"
    xmlns:mc="http://schemas.openxmlformats.org/markup-compatibility/2006"
    xmlns:Map="using:DevExpress.UI.Xaml.Map"
    x:Class="BingMapsLesson.MainPage"
    mc:Ignorable="d">
    <Grid Background="{StaticResource ApplicationPageBackgroundThemeBrush}">
        <Map:MapControl ZoomLevel="3" >
            <Map:MapControl.Layers>
                <Map:ImageTilesLayer>
                    <Map:ImageTilesLayer.DataProvider>
                        <Map:BingMapDataProvider Kind="Area"
                             BingKey="YOUR BING MAPS KEY" />
                    </Map:ImageTilesLayer.DataProvider>
                </Map:ImageTilesLayer>
            </Map:MapControl.Layers>
        </Map:MapControl>
    </Grid>
</Page>
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject
          MapDependencyObject
            MapDataProviderBase
              BingMapDataProvider

BingMapDataProvider Members

The class that loads map images from the Bing Maps data provider.

The following tables list the members exposed by the BingMapDataProvider type.

Public Constructors

	Name	Description
	BingMapDataProvider	Initializes a new instance of the BingMapDataProvider class with default settings.

Public Properties

	Name	Description
	ActualCulture	Gets the actual culture of a data provider.
	BingKey	Get or sets the key that is required to connect to the **Bing Maps** data provider.
	CacheOptions	Gets or sets the settings for a map's cache. (Inherited from **MapDataProviderBase**)
	Culture	Specifies the culture that should be used when obtaining data from the **Bing Maps** service.
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Kind	Gets or sets a value specifying the type of images to be displayed on a map.
	Owner	Provides access to the owner of the current data provider. (Inherited from **MapDataProviderBase**)
	Projection	Returns the projection supported by BingMapDataProvider.
	TileSource	Returns a tile source associated with the current data provider. (Inherited from **MapDataProviderBase**)

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)

© 2018 Developer Express Inc.

	Dispose	Disposes the BingMapDataProvider object. (Inherited from **MapDataProviderBase**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetMapSizeInPixels	Returns the map size (in pixels) for the specified zoom level.
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	BingKeyProperty	Identifies the BingKey dependency property.
S	CultureProperty	Identifies the Culture dependency property.

© 2018 Developer Express Inc.

	KindProperty	Identifies the Kind dependency property.

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the BingMapDataProvider class properties has changed its value. (Inherited from **MapDependencyObject**)

ActualCulture Property

Gets the actual culture of a data provider.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualCulture As String
```

C#

```
public string ActualCulture { get; }
```

Property Value

A String value.

See Also

BingMapDataProvider Class

BingKey Property

Get or sets the key that is required to connect to the **Bing Maps** data provider.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property BingKey As String
```

C#

```
public string BingKey { get; set; }
```

Property Value

A System.String that stores a Bing Maps key.

Remarks

For more information on obtaining a valid Bing Maps key, refer to the corresponding tutorial in this documentation: How to: Get a Bing Maps Key.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4321.

This lesson demonstrates how to create a simple map application which connects to the Bing Maps data provider.

Xaml

```
 (MainPage.xaml)
<Page
    xmlns="http://schemas.microsoft.com/winfx/2006/xaml/presentation"
    xmlns:x="http://schemas.microsoft.com/winfx/2006/xaml"
    xmlns:local="using:BingMapsLesson"
    xmlns:d="http://schemas.microsoft.com/expression/blend/2008"
    xmlns:mc="http://schemas.openxmlformats.org/markup-compatibility/2006"
    xmlns:Map="using:DevExpress.UI.Xaml.Map"
    x:Class="BingMapsLesson.MainPage"
    mc:Ignorable="d">
    <Grid Background="{StaticResource ApplicationPageBackgroundThemeBrush}">
        <Map:MapControl ZoomLevel="3" >
            <Map:MapControl.Layers>
                <Map:ImageTilesLayer>
                    <Map:ImageTilesLayer.DataProvider>
                        <Map:BingMapDataProvider Kind="Area"
                             BingKey="YOUR BING MAPS KEY" />
                    </Map:ImageTilesLayer.DataProvider>
                </Map:ImageTilesLayer>
            </Map:MapControl.Layers>
        </Map:MapControl>
    </Grid>
</Page>
```

Culture Property

Specifies the culture that should be used when obtaining data from the **Bing Maps** service.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property Culture As String
```
C#
```
public string Culture { get; set; }
```

Property Value

A System.String value.

See Also

Kind Property

Gets or sets a value specifying the type of images to be displayed on a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Kind As BingMapKind
```

C#

```
public BingMapKind Kind { get; set; }
```

Property Value

A BingMapKind enumeration value.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4321.

This lesson demonstrates how to create a simple map application which connects to the Bing Maps data provider.

Xaml

```
 (MainPage.xaml)
<Page
    xmlns="http://schemas.microsoft.com/winfx/2006/xaml/presentation"
    xmlns:x="http://schemas.microsoft.com/winfx/2006/xaml"
    xmlns:local="using:BingMapsLesson"
    xmlns:d="http://schemas.microsoft.com/expression/blend/2008"
    xmlns:mc="http://schemas.openxmlformats.org/markup-compatibility/2006"
    xmlns:Map="using:DevExpress.UI.Xaml.Map"
    x:Class="BingMapsLesson.MainPage"
    mc:Ignorable="d">
    <Grid Background="{StaticResource ApplicationPageBackgroundThemeBrush}">
        <Map:MapControl ZoomLevel="3" >
            <Map:MapControl.Layers>
                <Map:ImageTilesLayer>
                    <Map:ImageTilesLayer.DataProvider>
                        <Map:BingMapDataProvider Kind="Area"
                             BingKey="YOUR BING MAPS KEY" />
                    </Map:ImageTilesLayer.DataProvider>
                </Map:ImageTilesLayer>
            </Map:MapControl.Layers>
        </Map:MapControl>
    </Grid>
</Page>
```

Projection Property

Returns the projection supported by BingMapDataProvider.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public ReadOnly Property Projection As ProjectionBase
```
C#
```
public override ProjectionBase Projection { get; }
```

Property Value

Always **SphericalMercatorProjection**.

BingMapDataProvider Methods

The class that loads map images from the Bing Maps data provider.

The following tables list the members exposed by the BingMapDataProvider type.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Dispose	Disposes the BingMapDataProvider object. (Inherited from **MapDataProviderBase**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetMapSizeInPixels	Returns the map size (in pixels) for the specified zoom level.
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)

GetMapSizeInPixels Method

Returns the map size (in pixels) for the specified zoom level.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GetMapSizeInPixels(
   ByVal zoomLevel As Double
) As Size
```

C#

```
public override Size GetMapSizeInPixels(
   Double zoomLevel
)
```

Parameters

zoomLevel
A double value representing the map zoom level.

Return Value

A Size object that is the map size.

BingMapKind Enumeration

Lists the values used to specify the kind of maps to be obtained from the BingMapDataProvider.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Enum BingMapKind
```

C#

```
public enum BingMapKind
```

Members

Name	Description
Area	The map shows photo images of the Earth's surface.
Hybrid	The map shows a combination of Earth images and road schemas.
Road	The map shows road schemas.

Remarks

The values listed by the **BingMapKind** enumeration are used to set the BingMapDataProvider.Kind property.

BingMapTileSource Class

The class that implements loading image tiles from the **Bing Maps** data provider.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Class BingMapTileSource Inherits MapTileSourceBase
```
C#
```
public class BingMapTileSource : MapTileSourceBase
```

Inheritance Hierarchy

System.Object
  MultiScaleTileSource
    MapTileSourceBase
      BingMapTileSource

GetTileByZoomLevel Method

Returns the path to the image tile using the X and Y positions for the required zoom level.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GetTileByZoomLevel(
   ByVal zoomLevel As Integer,
   ByVal tilePositionX As Integer,
   ByVal tilePositionY As Integer
) As Uri
```

C#

```
public override Uri GetTileByZoomLevel(
   int zoomLevel,
   int tilePositionX,
   int tilePositionY
)
```

Parameters

zoomLevel
A System.Int32 value specifying the zoom level.
tilePositionX
A System.Int32 value specifying the X position of the image tile.
tilePositionY
A System.Int32 value specifying the Y position of the image tile.

Return Value

A System.Uri value specifying the path to the image tile.

CacheOptions Members

Contains settings that define parameters of a local cache to store image tiles.

The following tables list the members exposed by the CacheOptions type.

Public Constructors

	Name	Description
	CacheOptions	Initializes a new instance of the CacheOptions class with default settings.

Public Properties

	Name	Description
	DiskExpireTime	Specifies the time interval after which tile images are updated from a map data provider.
	DiskFolder	Gets or sets a directory to which the saved image tiles of the map control are stored.
	DiskLimit	Specifies the maximum allowed size allocated by the file cache on a disk. When this size is exceeded, the file cache is cleared to load new tile images from a map data provider.
	DiskSubFolder	Gets or sets a sub-directory to which the saved image tiles of the map control are stored.
	MemoryLimit	Specifies the maximum allowed size allocated by the file cache in system memory. When this size is exceeded, the file cache is cleared to load new tile images from a map data provider.

Public Methods

	Name	Description

ChoroplethColorizer Class

Represents the Choropleth-like colorizer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class ChoroplethColorizer Inherits MapColorizer, ISupportColorLegend
```

C#

```
public class ChoroplethColorizer : MapColorizer, ISupportColorLegend
```

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279980.

To create a analytical map, it is necessary to use the ChoroplethColorizer class. Perform the following steps to create the map.

- Provide a required vector map to map control. (To learn how to do this, refer to Providing Data).
- Create an ChoroplethColorizer object and assign it to the MapControl.Colorizer property.
- Specify the MapColorizer.Colors collection of the colorizer.
- Specify the RangeStops collection of the colorizer.
- Specify the ValueProvider property of the colorizer.

Xaml

```
 (MainPage.xaml)
<Map:MapControl.Colorizer>
    <Map:ChoroplethColorizer
        RangeStops="0 3000 10000 18000 28000 44000 82000 185000 1000000 2500000 15000000">
        <Map:ChoroplethColorizer.ValueProvider>
            <Map:ShapeAttributeValueProvider AttributeName="GDP_MD_EST"/>
        </Map:ChoroplethColorizer.ValueProvider>
        <Map:ChoroplethColorizer.Colors>
            <Color>#FFFF5A19</Color>
            <Color>#FFE5E335</Color>
            <Color>#FF6EC95C</Color>
        </Map:ChoroplethColorizer.Colors>
        <Map:ChoroplethColorizer.Legend>
            <Map:ColorScaleLegend Margin="0" Header="GDP by Countries" Description="In US dollars"
                                  RangeStopsFormat="0,B" MinWidth="400" FontSize="10"/>
        </Map:ChoroplethColorizer.Legend>
    </Map:ChoroplethColorizer>
</Map:MapControl.Colorizer>
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject
          ColorizerBase<MapItem>

ChoroplethColorizer Members

Represents the Choropleth-like colorizer.

The following tables list the members exposed by the ChoroplethColorizer type.

Public Constructors

	Name	Description
	ChoroplethColorizer	Initializes a new instance of the ChoroplethColorizer class with default settings.

Public Properties

	Name	Description
	ApproximateColors	Gets or sets a value specifying whether to apply an approximation algorithm to colors in a colorizer.
	Colors	Provides access to the collection of colors with which to colorize map shapes. (Inherited from **MapColorizer**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Legend	Gets or sets a map legend (color list or color scale legend type).
	RangeDistribution	Gets or sets the distribution type of range colors in a colorizer.
	RangeStops	Gets range stops for the Choropleth colorizer.
	ValueProvider	Provides values from the data source (Shapefile or KML file) to color map shapes according to data.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ColorizeElement	Obsolete. Colorize a map element. (Inherited from **ColorizerBase<T>**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	Equals	(Inherited from **System.Object**)

© 2018 Developer Express Inc.

	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetItemColor	Returns the color of the corresponding map item obtained from the Choropleth colorizer.
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	ApproximateColorsProperty	Identifies the ApproximateColors dependency property.
S	ColorsProperty	Identifies the Colors dependency property. (Inherited from **MapColorizer**)
S	LegendProperty	Identifies the Legend dependency property.
S	RangeDistributionProperty	Identifies the RangeDistribution dependency property.
S	RangeStopsProperty	Identifies the RangeStops dependency property.

© 2018 Developer Express Inc.

	ValueProviderProperty	Identifies the ValueProvider dependency property.

	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	ApproximateColorsProperty	Identifies the ApproximateColors dependency property.
S	ColorsProperty	Identifies the Colors dependency property. (Inherited from **MapColorizer**)
S	LegendProperty	Identifies the Legend dependency property.
S	RangeDistributionProperty	Identifies the RangeDistribution dependency property.
S	RangeStopsProperty	Identifies the RangeStops dependency property.

© 2018 Developer Express Inc.

	ValueProviderProperty	Identifies the ValueProvider dependency property.

ApproximateColors Property

Gets or sets a value specifying whether to apply an approximation algorithm to colors in a colorizer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ApproximateColors As Boolean
```

C#

```
public bool ApproximateColors { get; set; }
```

Property Value

true, if an approximation algorithm is applied to colors; otherwise, **false**.

See Also

Legend Property

Gets or sets a map legend (color list or color scale legend type).

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Legend As ColorLegend
```

C#

```
public ColorLegend Legend { get; set; }
```

Property Value

A ColorLegend class descendant representing a map legend.

See Also

ChoroplethColorizer Class

RangeDistribution Property

Gets or sets the distribution type of range colors in a colorizer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property RangeDistribution As ColorizerRangeDistributionBase
```

C#

```
public ColorizerRangeDistributionBase RangeDistribution { get; set; }
```

Property Value

A ColorizerRangeDistributionBase class descendant.

See Also

ChoroplethColorizer Class

© 2018 Developer Express Inc.

RangeStops Property

Gets range stops for the Choropleth colorizer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property RangeStops As DoubleCollection
```

C#

```
public DoubleCollection RangeStops { get; set; }
```

Property Value

A collection of double values that represents colorizer range stops.

Remarks

Use the **RangeStops** property to get access to the collection of range stops to automatically color map shapes with the Choropleth colorizer.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279980.

To create a analytical map, it is necessary to use the ChoroplethColorizer class. Perform the following steps to create the map.

- Provide a required vector map to map control. (To learn how to do this, refer to Providing Data).
- Create an ChoroplethColorizer object and assign it to the MapControl.Colorizer property.
- Specify the MapColorizer.Colors collection of the colorizer.
- Specify the RangeStops collection of the colorizer.
- Specify the ValueProvider property of the colorizer.

Xaml

```
 (MainPage.xaml)
<Map:MapControl.Colorizer>
    <Map:ChoroplethColorizer
        RangeStops="0 3000 10000 18000 28000 44000 82000 185000 1000000 2500000 15000000">
        <Map:ChoroplethColorizer.ValueProvider>
            <Map:ShapeAttributeValueProvider AttributeName="GDP_MD_EST"/>
        </Map:ChoroplethColorizer.ValueProvider>
        <Map:ChoroplethColorizer.Colors>
            <Color>#FFFF5A19</Color>
            <Color>#FFE5E335</Color>
            <Color>#FF6EC95C</Color>
        </Map:ChoroplethColorizer.Colors>
        <Map:ChoroplethColorizer.Legend>
            <Map:ColorScaleLegend Margin="0" Header="GDP by Countries" Description="In US dollars"
                                  RangeStopsFormat="0,B" MinWidth="400" FontSize="10"/>
        </Map:ChoroplethColorizer.Legend>
    </Map:ChoroplethColorizer>
</Map:MapControl.Colorizer>
```

ValueProvider Property

Provides values from the data source (Shapefile or KML file) to color map shapes according to data.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ValueProvider As IColorizerValueProvider
```

C#

```
public IColorizerValueProvider ValueProvider { get; set; }
```

Property Value

An object that implements the IColorizerValueProvider interface.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279980.

To create a analytical map, it is necessary to use the ChoroplethColorizer class. Perform the following steps to create the map.

- Provide a required vector map to map control. (To learn how to do this, refer to Providing Data).
- Create an ChoroplethColorizer object and assign it to the MapControl.Colorizer property.
- Specify the MapColorizer.Colors collection of the colorizer.
- Specify the RangeStops collection of the colorizer.
- Specify the ValueProvider property of the colorizer.

Xaml

```
 (MainPage.xaml)
<Map:MapControl.Colorizer>
    <Map:ChoroplethColorizer
        RangeStops="0 3000 10000 18000 28000 44000 82000 185000 1000000 2500000 15000000">
        <Map:ChoroplethColorizer.ValueProvider>
            <Map:ShapeAttributeValueProvider AttributeName="GDP_MD_EST"/>
        </Map:ChoroplethColorizer.ValueProvider>
        <Map:ChoroplethColorizer.Colors>
            <Color>#FFFF5A19</Color>
            <Color>#FFE5E335</Color>
            <Color>#FF6EC95C</Color>
        </Map:ChoroplethColorizer.Colors>
        <Map:ChoroplethColorizer.Legend>
            <Map:ColorScaleLegend Margin="0" Header="GDP by Countries" Description="In US dollars"
                                  RangeStopsFormat="0,B" MinWidth="400" FontSize="10"/>
        </Map:ChoroplethColorizer.Legend>
    </Map:ChoroplethColorizer>
</Map:MapControl.Colorizer>
```

ChoroplethColorizer Methods

Represents the Choropleth-like colorizer.

The following tables list the members exposed by the ChoroplethColorizer type.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ColorizeElement	Obsolete. Colorize a map element. (Inherited from **ColorizerBase<T>**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	Equals	(Inherited from **System.Object**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetItemColor	Returns the color of the corresponding map item obtained from the Choropleth colorizer.
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

© 2018 Developer Express Inc.

	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

GetItemColor Method

Returns the color of the corresponding map item obtained from the Choropleth colorizer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Function GetItemColor(
   ByVal item As MapItem
) As Color
```
C#
```
public override Color GetItemColor(
   MapItem item
)
```

Parameters
item
A MapItem object.

Return Value

A **System.Windows.Media.Color** structure that is the color of the corresponding map item.

See Also
ChoroplethColorizer Class

DevExpress.UI.Xaml.Map Namespace

© 2018 Developer Express Inc.

ColorCollection Class

A collection of colors.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class ColorCollection Inherits ObservableCollection(of Color)
```

C#

```
public class ColorCollection : ObservableCollection<Color>
```

Remarks

The MapColorizer contains a collection of colors that should be used to colorize shapes on a map. This collection is represented by a **ColorCollection** object returned via the MapColorizer.Colors property.

Inheritance Hierarchy

System.Object
  System.Collections.ObjectModel.Collection<Windows.UI.Color>
    System.Collections.ObjectModel.ObservableCollection<Windows.UI.Color>
      ColorCollection

Item Property

Provides indexed access to individual items in the collection.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Item(
   ByVal index As Integer
) As Color
```

C#

```
public Color this[
   int index
] { get; set; }
```

Parameters

index
A zero-based integer specifying the desired item's position within the collection. If it's negative or exceeds the last available index, an exception is raised.

Property Value

A Color object which represents an item at the specified position.

Remarks

Use this property to access items using index notation.

ColorizeElement Method

NOTE: This member is now obsolete.

The ColorizeElement method is now obsolete. Use the GetItemColor method instead.

Colorize a map element.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overridable Public Sub ColorizeElement(
   ByVal element As T
)
```

C#

```
public virtual void ColorizeElement(
   T element
)
```

Parameters

element
A MapItem object that represents a map element to colorize.

GetItemColor Method

Returns the color of the corresponding map item obtained from the map colorizer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
abstract Public Function GetItemColor(
   ByVal item As T
) As Color
```
C#
```
public abstract Color GetItemColor(
   T item
)
```

Parameters
item
A MapItem object.

Return Value

A **System.Windows.Media.Color** structure that is the color of the corresponding map item.

ConvertRangeValue Method

Converts the specified range value.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic

```
abstract Public Function ConvertRangeValue(
   ByVal value As Double
) As Double
```

C#

```
public abstract Double ConvertRangeValue(
   Double value
)
```

Parameters
value
A value to be converted.

Return Value

A Double object that is the result of the conversion.

ColorLegend Class

The base class for all color legends.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class ColorLegend Inherits Control
```

C#

```
public abstract class ColorLegend : Control
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject
          Windows.UI.Xaml.UIElement
            Windows.UI.Xaml.FrameworkElement
              Windows.UI.Xaml.Controls.Control
                ColorLegend
                  Derived classes

ColorLegendItems Property

Returns a collection of color legend items.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ColorLegendItems As IList(of ColorLegendItem)
```

C#

```
public IList<ColorLegendItem> ColorLegendItems { get; set; }
```

Property Value

An IList<ColorLegendItem> object.

RangeStopsFormat Property

Specifies the display format of range stops on a color legend.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property RangeStopsFormat As String
```

C#

```
public string RangeStopsFormat { get; set; }
```

Property Value

A string value that specifies the text representation of range stops on a color legend.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279980.

To create a analytical map, it is necessary to use the ChoroplethColorizer class. Perform the following steps to create the map.

- Provide a required vector map to map control. (To learn how to do this, refer to Providing Data).
- Create an ChoroplethColorizer object and assign it to the MapControl.Colorizer property.
- Specify the MapColorizer.Colors collection of the colorizer.
- Specify the ChoroplethColorizer.RangeStops collection of the colorizer.
- Specify the ChoroplethColorizer.ValueProvider property of the colorizer.

Xaml

```
 (MainPage.xaml)
<Map:MapControl.Colorizer>
    <Map:ChoroplethColorizer
        RangeStops="0 3000 10000 18000 28000 44000 82000 185000 1000000 2500000 15000000">
        <Map:ChoroplethColorizer.ValueProvider>
            <Map:ShapeAttributeValueProvider AttributeName="GDP_MD_EST"/>
        </Map:ChoroplethColorizer.ValueProvider>
        <Map:ChoroplethColorizer.Colors>
            <Color>#FFFF5A19</Color>
            <Color>#FFE5E335</Color>
            <Color>#FF6EC95C</Color>
        </Map:ChoroplethColorizer.Colors>
        <Map:ChoroplethColorizer.Legend>
            <Map:ColorScaleLegend Margin="0" Header="GDP by Countries" Description="In US dollars"
                                  RangeStopsFormat="0,B" MinWidth="400" FontSize="10"/>
        </Map:ChoroplethColorizer.Legend>
    </Map:ChoroplethColorizer>
</Map:MapControl.Colorizer>
```

ColorListLegend Members

A color legend represented as a list of colors.

The following tables list the members exposed by the ColorListLegend type.

Public Constructors

	Name	Description
	ColorListLegend	Initializes a new instance of the ColorListLegend class with default settings.

Public Properties

	Name	Description

ColorListLegend Constructor

Initializes a new instance of the ColorListLegend class with default settings.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public ColorListLegend()
```

ColorScaleLegend Class

A color legend represented as a color scale.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class ColorScaleLegend Inherits ColorLegend, INotifyPropertyChanged
```

C#

```
public class ColorScaleLegend : ColorLegend, INotifyPropertyChanged
```

Description Property

Gets or sets the description of the color legend.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Description As String
```

C#

```
public string Description { get; set; }
```

Property Value

A System.String value that specifies the text of the color legend.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279980.

To create a analytical map, it is necessary to use the ChoroplethColorizer class. Perform the following steps to create the map.

- Provide a required vector map to map control. (To learn how to do this, refer to Providing Data).
- Create an ChoroplethColorizer object and assign it to the MapControl.Colorizer property.
- Specify the MapColorizer.Colors collection of the colorizer.
- Specify the ChoroplethColorizer.RangeStops collection of the colorizer.
- Specify the ChoroplethColorizer.ValueProvider property of the colorizer.

Xaml

```
 (MainPage.xaml)
<Map:MapControl.Colorizer>
    <Map:ChoroplethColorizer
        RangeStops="0 3000 10000 18000 28000 44000 82000 185000 1000000 2500000 15000000">
        <Map:ChoroplethColorizer.ValueProvider>
            <Map:ShapeAttributeValueProvider AttributeName="GDP_MD_EST"/>
        </Map:ChoroplethColorizer.ValueProvider>
        <Map:ChoroplethColorizer.Colors>
            <Color>#FFFF5A19</Color>
            <Color>#FFE5E335</Color>
            <Color>#FF6EC95C</Color>
        </Map:ChoroplethColorizer.Colors>
        <Map:ChoroplethColorizer.Legend>
            <Map:ColorScaleLegend Margin="0" Header="GDP by Countries" Description="In US dollars"
                                  RangeStopsFormat="0,B" MinWidth="400" FontSize="10"/>
        </Map:ChoroplethColorizer.Legend>
    </Map:ChoroplethColorizer>
</Map:MapControl.Colorizer>
```

DescriptionVisible Property

Gets or sets a value indicating whether the legend description should be visible.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property DescriptionVisible As Visibility
```

C#

```
public Visibility DescriptionVisible { get; }
```

Property Value

true to show the legend description; **false** to hide it.

Header Property

Gets or sets the content of the color legend's header.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Header As String
```

C#

```
public string Header { get; set; }
```

Property Value

A System.String value that specifies the content of the color legend's header.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279980.

To create a analytical map, it is necessary to use the ChoroplethColorizer class. Perform the following steps to create the map.

PropertyChanged Event

Occurs every time any of the ColorScaleLegend class properties has changed its value.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
event Public PropertyChanged As PropertyChangedEventHandler
```

C#

```
public event PropertyChangedEventHandler PropertyChanged
```

Event Data

The event handler receives an argument of type System.ComponentModel.PropertyChangedEventArgs containing data related to this event.

The following **PropertyChangedEventArgs** properties provide information specific to this event.

EllipticalMercatorProjection Members

A class that defines methods specific to the Elliptical Mercator Projection.

The following tables list the members exposed by the EllipticalMercatorProjection type.

Public Constructors

	Name	Description
	EllipticalMercatorProjection	Initializes a new instance of the EllipticalMercatorProjection class with default settings.

Public Properties

	Name	Description
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	OffsetX	Gets or sets the horizontal offset for this projection. (Inherited from **ProjectionBase**)
	OffsetY	Gets or sets the vertical offset for this projection. (Inherited from **ProjectionBase**)
	ScaleX	Gets or sets a value that defines the ratio of map units to degrees of longitude (in radians). (Inherited from **ProjectionBase**)
	ScaleY	Gets or sets a value that defines the ratio of map units to degrees of latitude (in radians). (Inherited from **ProjectionBase**)

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	Equals	(Inherited from **System.Object**)
	GeoPointToMapUnit	EllipticalMercatorProjection
	GeoToKilometersSize	Converts the specified size in geographical points into the corresponding size in kilometers for the specified anchor point. (Inherited from **ProjectionBase**)

© 2018 Developer Express Inc.

	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	KilometersToGeoSize	Converts the specified size in kilometers into the corresponding size in geographical points for the specified anchor point. (Inherited from **ProjectionBase**)
	MapUnitToGeoPoint	Converts the specified map unit into the corresponding geographical point.
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	LatToKilometersRatio	Defines the ratio of **1** latitude degree to **1** kilometer. (Inherited from **ProjectionBase**)
S	LonToKilometersRatio	Defines the ratio of **1** longitude degree to **1** kilometer. (Inherited from **ProjectionBase**)
S	MaxLatitude	The maximum possible latitude for this projection.

© 2018 Developer Express Inc.

S	MaxLongitude	The maximum possible longitude for this projection.
S	MinLatitude	The minimum possible latitude for this projection.
S	MinLongitude	The minimum possible longitude for this projection.

GeoPointToMapUnit Method

EllipticalMercatorProjection

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GeoPointToMapUnit(
   ByVal geoPoint As GeoPoint
) As MapUnit
```

C#

```
public override MapUnit GeoPointToMapUnit(
   GeoPoint geoPoint
)
```

Parameters

geoPoint
A GeoPoint object to be converted.

Return Value

A MapUnit object containing internal map coordinates.

© 2018 Developer Express Inc.

MapUnitToGeoPoint Method

Converts the specified map unit into the corresponding geographical point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Function MapUnitToGeoPoint(
   ByVal mapUnit As MapUnit
) As GeoPoint
```
C#
```
public override GeoPoint MapUnitToGeoPoint(
   MapUnit mapUnit
)
```

Parameters
mapUnit
A MapUnit object to be converted.

Return Value

A GeoPoint object containing geographical coordinates.

	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	KilometersToGeoSize	Converts the specified size in kilometers into the corresponding size in geographical points for the specified anchor point. (Inherited from **ProjectionBase**)
	MapUnitToGeoPoint	Converts the specified map unit into the corresponding geographical point.
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	LatToKilometersRatio	Defines the ratio of **1** latitude degree to **1** kilometer. (Inherited from **ProjectionBase**)
S	LonToKilometersRatio	Defines the ratio of **1** longitude degree to **1** kilometer. (Inherited from **ProjectionBase**)

© 2018 Developer Express Inc.

S	MaxLatitude	The maximum possible latitude for this projection.
S	MaxLongitude	The maximum possible longitude for this projection.
S	MinLatitude	The minimum possible latitude for this projection.
S	MinLongitude	The minimum possible longitude for this projection.

EqualAreaProjection Methods

A class that defines methods specific to the Equal Area Projection.

The following tables list the members exposed by the EqualAreaProjection type.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	Equals	(Inherited from **System.Object**)
	GeoPointToMapUnit	Converts the specified geographical point into internal map units.
	GeoToKilometersSize	Converts the specified size in geographical points into the corresponding size in kilometers for the specified anchor point. (Inherited from **ProjectionBase**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	KilometersToGeoSize	Converts the specified size in kilometers into the corresponding size in geographical points for the specified anchor point. (Inherited from **ProjectionBase**)
	MapUnitToGeoPoint	Converts the specified map unit into the corresponding geographical point.
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)

GeoPointToMapUnit Method

Converts the specified geographical point into internal map units.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GeoPointToMapUnit(
   ByVal geoPoint As GeoPoint
) As MapUnit
```

C#

```
public override MapUnit GeoPointToMapUnit(
   GeoPoint geoPoint
)
```

Parameters

geoPoint
A GeoPoint object to be converted.

Return Value

A MapUnit object containing internal map coordinates.

MapUnitToGeoPoint Method

Converts the specified map unit into the corresponding geographical point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function MapUnitToGeoPoint(
   ByVal mapUnit As MapUnit
) As GeoPoint
```

C#

```
public override GeoPoint MapUnitToGeoPoint(
   MapUnit mapUnit
)
```

Parameters

mapUnit
A MapUnit object to be converted.

Return Value

A GeoPoint object containing geographical coordinates.

EquationRangeDistribution Members

The base for classes that define exponential and logarithmic distribution of color ranges in a colorizer.

The following tables list the members exposed by the EquationRangeDistribution type.

Public Properties

	Name	Description
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Factor	Gets or sets the factor specifying the percentages of the starting color and the ending color in the colorizer.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ConvertRangeValue	Converts the specified range value. (Inherited from **ColorizerRangeDistributionBase**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)

© 2018 Developer Express Inc.

	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
	FactorProperty	Identifies the Factor dependency property.

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the EquationRangeDistribution class properties has changed its value. (Inherited from **ColorizerRangeDistributionBase**)

Factor Property

Gets or sets the factor specifying the percentages of the starting color and the ending color in the colorizer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Factor As Double
```

C#

```
public Double Factor { get; set; }
```

Property Value

A factor that specifies the percentages of the starting color and the ending color to be used at the corresponding position in the colorizer.

GeoPointToMapUnit Method

Converts the specified geographical point into internal map units.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GeoPointToMapUnit(
   ByVal geoPoint As GeoPoint
) As MapUnit
```

C#

```
public override MapUnit GeoPointToMapUnit(
   GeoPoint geoPoint
)
```

Parameters

geoPoint
A GeoPoint object to be converted.

Return Value

A MapUnit object containing internal map coordinates.

ConvertRangeValue Method

Converts the specified range value.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic

```
Overrides Public Function ConvertRangeValue(
   ByVal value As Double
) As Double
```

C#

```
public override Double ConvertRangeValue(
   Double value
)
```

Parameters
value
A value to be converted.

Return Value

A Double object that is the result of the conversion.

GeoPoint Members

A geographical point on the map.

The following tables list the members exposed by the GeoPoint type.

Public Constructors

	Name	Description
	GeoPoint	Overloaded. Initializes a new instance of the GeoPoint class with the specified latitude and longitude.

Public Properties

	Name	Description
S	Empty	Returns a GeoPoint object whose coordinates are not initialized.
	IsEmpty	Gets a value that indicates whether this GeoPoint object's coordinates are initialized.
	Latitude	Gets or sets a latitude value for the current geographical coordinate.
	Longitude	Gets or sets a longitude value for the current geographical coordinate.

Public Methods

	Name	Description
S	Equals	Overloaded. Determines whether the two specified GeoPoint objects are equal.
	Equals	Overloaded. Determines whether the specified object is equal to the current GeoPoint instance.
	GetHashCode	Gets the hash code (a number) that corresponds to the value of the current GeoPoint object.
	GetType	(Inherited from **System.Object**)
S	Normalize	Normalizes the specified geographical point's coordinates.
S	Parse	Converts the string representation of a geographical point to its GeoPoint equivalent.
S	ReferenceEquals	(Inherited from **System.Object**)
	ToString	Overloaded. Returns the textual representation of the GeoPoint.

GeoPoint Constructor (Double, Double)

Initializes a new instance of the GeoPoint class with the specified latitude and longitude.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public New(
   ByVal latitude As Double,
   ByVal longitude As Double
)
```

C#

```
public GeoPoint(
   Double latitude,
   Double longitude
)
```

Parameters

latitude
A System.Double value which specifies the latitude of the geographical point. This value is assigned to the Latitude property.
longitude
A System.Double value which specifies the longitude of the geographical point. This value is assigned to the Longitude property.

Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public ReadOnly Property IsEmpty As Boolean
```
C#
```
public bool IsEmpty { get; }
```

Property Value

true if the GeoPoint object is empty; otherwise **false**.

Latitude Property

Gets or sets a latitude value for the current geographical coordinate.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property Latitude As Double
```
C#
```
public Double Latitude { get; set; }
```

Property Value

A System.Double value that is the latitude for this GeoPoint.

Longitude Property

Gets or sets a longitude value for the current geographical coordinate.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Longitude As Double
```

C#

```
public Double Longitude { get; set; }
```

Property Value

A System.Double value that is the longitude for this GeoPoint.

GeoPoint Methods

A geographical point on the map.

The following tables list the members exposed by the GeoPoint type.

Public Methods

	Name	Description
	Equals	Overloaded. Determines whether the two specified GeoPoint objects are equal.
	Equals	Overloaded. Determines whether the specified object is equal to the current GeoPoint instance.
	GetHashCode	Gets the hash code (a number) that corresponds to the value of the current GeoPoint object.
	GetType	(Inherited from **System.Object**)
	Normalize	Normalizes the specified geographical point's coordinates.
	Parse	Converts the string representation of a geographical point to its GeoPoint equivalent.
	ReferenceEquals	(Inherited from **System.Object**)
	ToString	Overloaded. Returns the textual representation of the GeoPoint.

See Also
GeoPoint Members
DevExpress.UI.Xaml.Map Namespace

Equals Method

Determines whether the specified object is equal to the current GeoPoint instance.

Overload List

Name	Description
bool Equals(object o)	Determines whether the specified object is equal to the current GeoPoint instance.
static bool Equals(GeoPoint point1, GeoPoint point2)	Determines whether the two specified GeoPoint objects are equal.
static bool Equals(object objA, object objB)	Inherited from **System.Object**

See Also
GeoPoint Class
GeoPoint Members
DevExpress.UI.Xaml.Map Namespace
GeoPoint.Equals Overload List

Determines whether the specified object is equal to the current GeoPoint instance.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Function Equals(
   ByVal o As Object
) As Boolean
```
C#
```
public override bool Equals(
   object o
)
```

Parameters
o
The object to compare with the current object.

Return Value

true if the specified object is equal to the current GeoPoint instance; otherwise **false**.

Remarks

Two GeoPoint objects are considered equal if their Latitude and Longitude property values are equal.

See Also
GeoPoint Class
GeoPoint Members
DevExpress.UI.Xaml.Map Namespace
GeoPoint.Equals Overload List

Determines whether the two specified GeoPoint objects are equal.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic

© 2018 Developer Express Inc.

```
static Public Function Equals(
   ByVal point1 As GeoPoint,
   ByVal point2 As GeoPoint
) As Boolean
```

C#

```
public static bool Equals(
   GeoPoint point1,
   GeoPoint point2
)
```

Parameters

point1
A GeoPoint instance that specifies the first geographical point to compare.
point2
A GeoPoint instance that specifies the second geographical point to compare.

Return Value

true if specified objects are equal; otherwise **false**.

Remarks

Two GeoPoint objects are considered equal if their Latitude and Longitude property values are equal.

GetHashCode Method

Gets the hash code (a number) that corresponds to the value of the current GeoPoint object.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GetHashCode() As Integer
```

C#

```
public override int GetHashCode()
```

Return Value

An integer value that is the hash code for the current object.

Remarks

This function supports the .NET infrastructure. For more information on hash codes, see the System.Object.GetHashCode topic in **MSDN**.

Normalize Method

Normalizes the specified geographical point's coordinates.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
static Public Function Normalize(
   ByVal geoPoint As GeoPoint
) As GeoPoint
```

C#

```
public static GeoPoint Normalize(
   GeoPoint geoPoint
)
```

Parameters

geoPoint
A non-normalized GeoPoint object.

Return Value

A normalized GeoPoint object.

Remarks

The point's Latitude is normalized to a range from **-90** to **90**. If the specified value exceeds this range, it will be truncated during normalization.

The point's Longitude is normalized to a range from **-180** to **180**. If the specified value exceeds this range, it will be increased or decreased by **360** until it satisfies the normalized range.

Parse Method

Converts the string representation of a geographical point to its GeoPoint equivalent.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
static Public Function Parse(
   ByVal source As String
) As GeoPoint
```

C#

```
public static GeoPoint Parse(
   string source
)
```

Parameters

source
A string containing geographical coordinates, separated by a comma.

Return Value

A GeoPoint object that is equivalent to the specified string.

Returns the textual representation of the GeoPoint.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Function ToString(
   ByVal provider As IFormatProvider
) As String
```
C#
```
public string ToString(
   IFormatProvider provider
)
```

Parameters
provider
An object, implementing the System.IFormatProvider interface.

Return Value

A System.String value, which is the textual representation of the GeoPoint.

Parse Method

Converts the string representation of a collection to its GeoPointCollection equivalent.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
static Public Function Parse(
   ByVal source As String
) As GeoPointCollection
```

C#

```
public static GeoPointCollection Parse(
   string source
)
```

Parameters

source
A string containing collection item coordinates, separated by commas.

Return Value

A GeoPointCollection object that is equivalent to the specified string.

GraphColorizer Class

Represents the Graph colorizer that tries to paint shapes that have a common border using different colors.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class GraphColorizer Inherits MapColorizer
```

C#

```
public class GraphColorizer : MapColorizer
```

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279977.

To create a political map, it is necessary to use the GraphColorizer class. Perform the following steps to create the map.

- Provide a required vector map to map control. (To learn how to do this, refer to Providing Data).
- Create an GraphColorizer object and assign it to the MapControl.Colorizer property.
- Specify the MapColorizer.Colors collection of the colorizer.

Xaml

```
 (MainPage.xaml)
<Map:MapControl.Colorizer>
    <Map:GraphColorizer>
        <Map:GraphColorizer.Colors>
            <Color>#5b9bd5</Color>
            <Color>#ed7d31</Color>
            <Color>#a5a5a5</Color>
            <Color>#ffc000</Color>
            <Color>#4472c4</Color>
            <Color>#70ad47</Color>
        </Map:GraphColorizer.Colors>
    </Map:GraphColorizer>
</Map:MapControl.Colorizer>
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject
          ColorizerBase<MapItem>
            MapColorizer
              GraphColorizer

GetItemColor Method

Returns the color of the corresponding map item obtained from the graph colorizer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GetItemColor(
   ByVal item As MapItem
) As Color
```

C#

```
public override Color GetItemColor(
   MapItem item
)
```

Parameters

item
A MapItem object.

Return Value

A **System.Windows.Media.Color** structure that is the color of the corresponding map item.

Returns the value from the data source (e.g., Shapefile) that specifies how to color map shapes.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Function GetValue(
   ByVal item As Object
) As Double
```

C#

```
Double GetValue(
   object item
)
```

Parameters

item
An object representing the map item to color with a colorizer.

Return Value

A double value from the data source (e.g., Shapefile).

ImageTilesLayer Constructor

Initializes a new instance of the ImageTilesLayer class with default settings.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public ImageTilesLayer()
```

ImageTilesLayer Properties

A layer that displays image tiles obtained from one of the supported map providers.

The following tables list the members exposed by the ImageTilesLayer type.

Public Constructors

	Name	Description
	ImageTilesLayer	Initializes a new instance of the ImageTilesLayer class with default settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

DataProvider Property

Provides access to an object that obtains map data from online data providers.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property DataProvider As MapDataProviderBase
```

C#

```
public MapDataProviderBase DataProvider { get; set; }
```

Property Value

A MapDataProviderBase class descendant that is a specific data provider.

Remarks

For more information, refer to Map Image Data.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4321.

This lesson demonstrates how to create a simple map application which connects to the Bing Maps data provider.

Xaml

```
 (MainPage.xaml)
<Page
    xmlns="http://schemas.microsoft.com/winfx/2006/xaml/presentation"
    xmlns:x="http://schemas.microsoft.com/winfx/2006/xaml"
    xmlns:local="using:BingMapsLesson"
    xmlns:d="http://schemas.microsoft.com/expression/blend/2008"
    xmlns:mc="http://schemas.openxmlformats.org/markup-compatibility/2006"
    xmlns:Map="using:DevExpress.UI.Xaml.Map"
    x:Class="BingMapsLesson.MainPage"
    mc:Ignorable="d">
    <Grid Background="{StaticResource ApplicationPageBackgroundThemeBrush}">
        <Map:MapControl ZoomLevel="3" >
            <Map:MapControl.Layers>
                <Map:ImageTilesLayer>
                    <Map:ImageTilesLayer.DataProvider>
                        <Map:BingMapDataProvider Kind="Area"
                             BingKey="YOUR BING MAPS KEY" />
                    </Map:ImageTilesLayer.DataProvider>
                </Map:ImageTilesLayer>
            </Map:MapControl.Layers>
        </Map:MapControl>
    </Grid>
</Page>
```

KmlReader Class

Provides functionality to load shape data from an external file in the KML format.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class KmlReader Inherits MapFileReaderBase
```

C#

```
public class KmlReader : MapFileReaderBase
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject
          MapFileReaderBase

KmlReader Members

Provides functionality to load shape data from an external file in the KML format.

The following tables list the members exposed by the KmlReader type.

Public Constructors

	Name	Description
	KmlReader	Initializes a new instance of the KmlReader class with default settings.

Public Properties

	Name	Description
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	FileSource	Specifies the source for this file reader. (Inherited from **MapFileReaderBase**)
	KmlFileStream	Specifies the stream containing the KML file.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	Equals	(Inherited from **System.Object**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)

© 2018 Developer Express Inc.

	ReadAsync	Asynchronously reads a sequence of bytes from the specified file source and advances the position within the stream by the number of bytes read. (Inherited from **MapFileReaderBase**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Release	Releases the resources of the KML file reader.
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	FileSourceProperty	Identifies the FileSource dependency property. (Inherited from **MapFileReaderBase**)

KmlFileStream Property

Specifies the stream containing the KML file.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property KmlFileStream As Stream
```

C#

```
public Stream KmlFileStream { get; }
```

Property Value

A Stream object that contains the KML file to be loaded.

MaxZoomLevel Property

Gets or sets the maximum zoom level at which this layer should be visible.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property MaxZoomLevel As Integer
```

C#

```
public int MaxZoomLevel { get; set; }
```

Property Value

An integer value specifying the maximum zoom level.

Remarks

Use the MinZoomLevel property to specify the minimum zoom level at which this layer should be visible.

If you wish to get the current zoom level of a map control, use the MapControl.ZoomLevel property.

ViewportChanged Event

Occurs every time the current viewport is changed.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
event Public ViewportChanged As ViewportChangedEventHandler
```
C#
```
public event ViewportChangedEventHandler ViewportChanged
```

Event Data

The event handler receives an argument of type ViewportChangedEventArgs containing data related to this event.
The following **ViewportChangedEventArgs** properties provide information specific to this event.

Property	Description
BottomRight	Returns the bottom-right coordinate of the current viewport.
TopLeft	Returns the top-left coordinate of the current viewport.
ZoomLevel	Returns the zoom level of the current viewport.

GeoPointToMapUnit Method

Converts the specified geographical point into internal map units.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Function GeoPointToMapUnit(
   ByVal point As GeoPoint
) As MapUnit
```
C#
```
public MapUnit GeoPointToMapUnit(
   GeoPoint point
)
```

Parameters
point
A GeoPoint object to be converted.

Return Value

A MapUnit object containing internal map coordinates.

See Also

GeoToKilometersSize Method

Converts the specified size in geographical points into the corresponding size in kilometers for the specified anchor point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Function GeoToKilometersSize(
   ByVal anchorPoint As GeoPoint,
   ByVal size As Size
) As Size
```

C#

```
public Size GeoToKilometersSize(
   GeoPoint anchorPoint,
   Size size
)
```

Parameters

anchorPoint
A GeoPoint object containing geographical coordinates for which it is necessary to convert the size.
size
A **System.Windows.Size** value specifying the size to be converted.

Return Value

A Size in kilometers.

GeoToScreenPoint Method

Converts the specified geographical point into a point on the screen.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Function GeoToScreenPoint(
   ByVal point As GeoPoint
) As Point
```

C#

```
public Point GeoToScreenPoint(
   GeoPoint point
)
```

Parameters

point
A GeoPoint object to be converted.

Return Value

A Point value.

KilometersToGeoSize Method

Converts the specified size in kilometers into the corresponding size in geographical points for the specified anchor point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic

```
Public Function KilometersToGeoSize(
   ByVal anchorPoint As GeoPoint,
   ByVal size As Size
) As Size
```

C#

```
public Size KilometersToGeoSize(
   GeoPoint anchorPoint,
   Size size
)
```

Parameters
anchorPoint
A GeoPoint object containing geographical coordinates for which it is necessary to convert the size.
size
A **System.Windows.Size** value specifying the size to be converted.

Return Value

A Size in geographical points.

MapUnitToGeoPoint Method

Converts the specified map unit into the corresponding geographical point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Function MapUnitToGeoPoint(
   ByVal unit As MapUnit
) As GeoPoint
```

C#

```
public GeoPoint MapUnitToGeoPoint(
   MapUnit unit
)
```

Parameters

unit
A MapUnit object to be converted.

Return Value

A GeoPoint object containing geographical coordinates.

MapUnitToScreenPoint Method

Converts the specified map unit into the point on a screen.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Function MapUnitToScreenPoint(
   ByVal mapUnit As MapUnit
) As Point
```

C#

```
public Point MapUnitToScreenPoint(
   MapUnit mapUnit
)
```

Parameters

mapUnit
A MapUnit object to be converted.

Return Value

A Point value.

ScreenPointToMapUnit Method

Converts the specified screen point into internal map units.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Function ScreenPointToMapUnit(
   ByVal point As Point
) As MapUnit
```

C#

```
public MapUnit ScreenPointToMapUnit(
   Point point
)
```

Parameters

point
A **System.Windows.Point** value to be converted.

Return Value

A MapUnit object containing internal map coordinates.

ScreenToGeoPoint Method

Converts the specified screen point into the corresponding geographical point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Function ScreenToGeoPoint(
   ByVal point As Point
) As GeoPoint
```

C#

```
public GeoPoint ScreenToGeoPoint(
   Point point
)
```

Parameters

point
A **System.Windows.Point** value to be converted.

Return Value

A GeoPoint object containing geographical coordinates.

LayerCollection Class

A collection of layers.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class LayerCollection Inherits MapElementCollection(of LayerBase)
```

C#

```
public class LayerCollection : MapElementCollection<LayerBase>
```

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4321.

This lesson demonstrates how to create a simple map application which connects to the Bing Maps data provider.

Xaml

```
 (MainPage.xaml)
<Page
    xmlns="http://schemas.microsoft.com/winfx/2006/xaml/presentation"
    xmlns:x="http://schemas.microsoft.com/winfx/2006/xaml"
    xmlns:local="using:BingMapsLesson"
    xmlns:d="http://schemas.microsoft.com/expression/blend/2008"
    xmlns:mc="http://schemas.openxmlformats.org/markup-compatibility/2006"
    xmlns:Map="using:DevExpress.UI.Xaml.Map"
    x:Class="BingMapsLesson.MainPage"
    mc:Ignorable="d">
    <Grid Background="{StaticResource ApplicationPageBackgroundThemeBrush}">
        <Map:MapControl ZoomLevel="3" >
            <Map:MapControl.Layers>
                <Map:ImageTilesLayer>
                    <Map:ImageTilesLayer.DataProvider>
                        <Map:BingMapDataProvider Kind="Area"
                             BingKey="YOUR BING MAPS KEY" />
                    </Map:ImageTilesLayer.DataProvider>
                </Map:ImageTilesLayer>
            </Map:MapControl.Layers>
        </Map:MapControl>
    </Grid>
</Page>
```

Item Property

Provides indexed access to individual items in the collection.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Item(
   ByVal index As Integer
) As LayerBase
```

C#

```
public LayerBase this[
   int index
] { get; set; }
```

Parameters

index
A zero-based integer specifying the desired item's position within the collection. If it's negative or exceeds the last available index, an exception is raised.

Property Value

A LayerBase object which represents an item at the specified position.

Remarks

Use this property to access items using index notation.

ConvertRangeValue Method

Converts the specified range value.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function ConvertRangeValue(
   ByVal value As Double
) As Double
```

C#

```
public override Double ConvertRangeValue(
   Double value
)
```

Parameters

value
A value to be converted.

Return Value

A Double object that is the result of the conversion.

LogarithmicRangeDistribution Members

Represents the logarithmic distribution of color ranges in a colorizer.

The following tables list the members exposed by the LogarithmicRangeDistribution type.

Public Constructors

	Name	Description
	LogarithmicRangeDistribution	Initializes a new instance of the LogarithmicRangeDistribution class with default settings.

Public Properties

	Name	Description
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Factor	Gets or sets the factor specifying the percentages of the starting color and the ending color in the colorizer. (Inherited from **EquationRangeDistribution**)

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ConvertRangeValue	Converts the specified range value.
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)

© 2018 Developer Express Inc.

	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	FactorProperty	Identifies the Factor dependency property. (Inherited from **EquationRangeDistribution**)

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the LogarithmicRangeDistribution class properties has changed its value. (Inherited from **ColorizerRangeDistributionBase**)

MapColorizer Class

The base class for all colorizers that are used in a Map control.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class MapColorizer Inherits ColorizerBase(of MapItem), IOwnedElement
```

C#

```
public abstract class MapColorizer : ColorizerBase<MapItem>, IOwnedElement
```

Remarks

The **MapColorizer** class introduces the Colors property, which defines colors to be used for colorizing shapes on a map.

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass

Colors Property

Provides access to the collection of colors with which to colorize map shapes.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Colors As ColorCollection
```

C#

```
public ColorCollection Colors { get; set; }
```

Property Value

A ColorCollection object that contains colors to colorize map shapes.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279977.

To create a political map, it is necessary to use the GraphColorizer class. Perform the following steps to create the map.

- Provide a required vector map to map control. (To learn how to do this, refer to Providing Data).
- Create an GraphColorizer object and assign it to the MapControl.Colorizer property.
- Specify the Colors collection of the colorizer.

Xaml

```
 (MainPage.xaml)
<Map:MapControl.Colorizer>
    <Map:GraphColorizer>
        <Map:GraphColorizer.Colors>
            <Color>#5b9bd5</Color>
            <Color>#ed7d31</Color>
            <Color>#a5a5a5</Color>
            <Color>#ffc000</Color>
            <Color>#4472c4</Color>
            <Color>#70ad47</Color>
        </Map:GraphColorizer.Colors>
    </Map:GraphColorizer>
</Map:MapControl.Colorizer>
```

MapControl Class

A Map control to display raster and vector maps.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class MapControl Inherits Control, IAnimatable
```

C#

```
public class MapControl : Control, IAnimatable
```

Remarks

To learn more, see Map Control.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4321.

This lesson demonstrates how to create a simple map application which connects to the Bing Maps data provider.

Xaml

```
 (MainPage.xaml)
<Page
    xmlns="http://schemas.microsoft.com/winfx/2006/xaml/presentation"
    xmlns:x="http://schemas.microsoft.com/winfx/2006/xaml"
    xmlns:local="using:BingMapsLesson"
    xmlns:d="http://schemas.microsoft.com/expression/blend/2008"
    xmlns:mc="http://schemas.openxmlformats.org/markup-compatibility/2006"
    xmlns:Map="using:DevExpress.UI.Xaml.Map"
    x:Class="BingMapsLesson.MainPage"
    mc:Ignorable="d">
    <Grid Background="{StaticResource ApplicationPageBackgroundThemeBrush}">
        <Map:MapControl ZoomLevel="3" >
            <Map:MapControl.Layers>
                <Map:ImageTilesLayer>
                    <Map:ImageTilesLayer.DataProvider>
                        <Map:BingMapDataProvider Kind="Area"
                             BingKey="YOUR BING MAPS KEY" />
                    </Map:ImageTilesLayer.DataProvider>
                </Map:ImageTilesLayer>
            </Map:MapControl.Layers>
        </Map:MapControl>
    </Grid>
</Page>
```

	Tag	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Template	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ToolTipEnabled	Gets or sets a value that specifies whether or not tooltips are enabled for a map.
	ToolTipInfo	Provides access to the ToolTipInfo object that contains settings of built-in map tooltips.

© 2018 Developer Express Inc.

	ToolTipTemplate	Gets or sets the template that defines the presentation of the map tooltip.
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseSystemFocusVisuals	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	UseSystemFocusVisualsProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	VerticalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Width	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ZoomCommand	Returns a command that zooms a map.
	ZoomLevel	Gets or sets the current zoom level of a Map Control.

MapControl Constructor

Initializes a new instance of the MapControl class with default settings.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public MapControl()
```

MapControl Properties

A Map control to display raster and vector maps.

The following tables list the members exposed by the MapControl type.

Public Constructors

	Name	Description
	MapControl	Initializes a new instance of the MapControl class with default settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualNavigationPanelOptions	Gets the actual options of a Navigation Panel.
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CenterPoint	Gets or sets a point that should be placed at the center of the map.
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Colorizer	Gets or sets a value specifying the map colorizer (choropleth colorizer or graph colorizer) with which to colorize map shapes.
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	EnableAnimation	Gets or sets a value that specifies whether animation is enabled for a map control.
	EnableAntialiasing	Gets or sets a value that specifies whether anti-aliasing is enabled for a map control.
	EnableNavigation	Gets or sets whether to allow the end-user to scroll the map. This is a dependency property.
	EnableScrolling	Gets or sets a value indicating whether or not scrolling is enabled.
	EnableZooming	Gets or sets whether to allow the end-user to zoom the map. This is a dependency property.
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Layers	Provides access to the collection of layers to be displayed within the MapControl.
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	NavigationPanelOptions	Provides access to the navigation panel options of a map control.
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
S	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Padding	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	PaddingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

S	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
S	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

© 2018 Developer Express Inc.

	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ScrollCommand	Returns a command that scrolls a map.
	SelectionMode	Gets or sets a value specifying how the map control is selected.
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabIndex	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabIndexProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigation	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigationProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Tag	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Template	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ToolTipEnabled	Gets or sets a value that specifies whether or not tooltips are enabled for a map.
	ToolTipInfo	Provides access to the ToolTipInfo object that contains settings of built-in map tooltips.

© 2018 Developer Express Inc.

	ToolTipTemplate	Gets or sets the template that defines the presentation of the map tooltip.
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseSystemFocusVisuals	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	UseSystemFocusVisualsProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	VerticalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)
S	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Width	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ZoomCommand	Returns a command that zooms a map.
	ZoomLevel	Gets or sets the current zoom level of a Map Control.

© 2018 Developer Express Inc.

Public Methods

	Name	Description
	AddHandler	(Inherited from **Windows.UI.Xaml.UIElement**)

ActualNavigationPanelOptions Property

Gets the actual options of a Navigation Panel.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualNavigationPanelOptions As NavigationPanelOptions
```

C#

```
public NavigationPanelOptions ActualNavigationPanelOptions { get; }
```

Property Value

A NavigationPanelOptions object.

CenterPoint Property

Gets or sets a point that should be placed at the center of the map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property CenterPoint As GeoPoint
```

C#

```
public GeoPoint CenterPoint { get; set; }
```

Property Value

A GeoPoint object that specifies the map center in geographical coordinates.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279019.

Xaml

```
 (MainPage.xaml)
<Page xmlns:Map="using:DevExpress.UI.Xaml.Map"
    x:Class="MapLesson1.MainPage"
    xmlns="http://schemas.microsoft.com/winfx/2006/xaml/presentation"
    xmlns:x="http://schemas.microsoft.com/winfx/2006/xaml">
    <Grid
        Background="{ThemeResource ApplicationPageBackgroundThemeBrush}">
        <Map:MapControl
            ZoomLevel="4">
            <Map:MapControl.CenterPoint>
                <Map:GeoPoint
                    Latitude="55"
                    Longitude="25"/>
            </Map:MapControl.CenterPoint>
            <Map:ImageTilesLayer>
                <Map:ImageTilesLayer.DataProvider>
                    <Map:BingMapDataProvider
                        BingKey="Your Bing Key Here"
                        Kind="Area"/>
                </Map:ImageTilesLayer.DataProvider>
            </Map:ImageTilesLayer>
        </Map:MapControl>
    </Grid>
</Page>
```

Colorizer Property

Gets or sets a value specifying the map colorizer (choropleth colorizer or graph colorizer) with which to colorize map shapes.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Colorizer As MapColorizer
```

C#

```
public MapColorizer Colorizer { get; set; }
```

Property Value

A MapColorizer class descendant specifying the colorizer type.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279977.

To create a political map, it is necessary to use the GraphColorizer class. Perform the following steps to create the map.

- Provide a required vector map to map control. (To learn how to do this, refer to Providing Data).
- Create an GraphColorizer object and assign it to the Colorizer property.
- Specify the MapColorizer.Colors collection of the colorizer.

Xaml

```
 (MainPage.xaml)
<Map:MapControl.Colorizer>
    <Map:GraphColorizer>
        <Map:GraphColorizer.Colors>
            <Color>#5b9bd5</Color>
            <Color>#ed7d31</Color>
            <Color>#a5a5a5</Color>
            <Color>#ffc000</Color>
            <Color>#4472c4</Color>
            <Color>#70ad47</Color>
        </Map:GraphColorizer.Colors>
    </Map:GraphColorizer>
</Map:MapControl.Colorizer>
```

EnableAnimation Property

Gets or sets a value that specifies whether animation is enabled for a map control.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property EnableAnimation As Boolean
```

C#

```
public bool EnableAnimation { get; set; }
```

Property Value

true, if animation is enabled; otherwise, **false**.

EnableAntialiasing Property

Gets or sets a value that specifies whether anti-aliasing is enabled for a map control.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property EnableAntialiasing As Boolean
```

C#

```
public bool EnableAntialiasing { get; set; }
```

Property Value

true, if anti-aliasing is enabled; otherwise, **false**.

See Also

MapControl Class
MapControl Members

EnableNavigation Property

Gets or sets whether to allow the end-user to scroll the map. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property EnableNavigation As Boolean
```

C#

```
public bool EnableNavigation { get; set; }
```

Property Value

true, to allow the end-user to scroll the map; otherwise, **false**.

Remarks

Setting the **EnableNavigation** property to **false** prevents end-users from zooming using mouse wheel and gestures regardless of the current EnableZooming property value. In this case, end-users can zoom the map using the Navigation Panel.

EnableScrolling Property

Gets or sets a value indicating whether or not scrolling is enabled.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property EnableScrolling As Boolean
```
C#
```
public bool EnableScrolling { get; set; }
```

Property Value

true, if scrolling is enabled; otherwise, **false**.

EnableZooming Property

Gets or sets whether to allow the end-user to zoom the map. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property EnableZooming As Boolean
```

C#

```
public bool EnableZooming { get; set; }
```

Property Value

true, if zooming is enabled; otherwise, **false**.

Remarks

Setting the EnableNavigation property to **false** prevents the end-user from zooming using mouse wheel and gestures regardless of the current **EnableZooming** property value.

Layers Property

Provides access to the collection of layers to be displayed within the MapControl.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Layers As LayerCollection
```

C#

```
public LayerCollection Layers { get; }
```

Property Value

A LayerCollection object containing map layers.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4321.

This lesson demonstrates how to create a simple map application which connects to the Bing Maps data provider.

Xaml

```
 (MainPage.xaml)
<Page
    xmlns="http://schemas.microsoft.com/winfx/2006/xaml/presentation"
    xmlns:x="http://schemas.microsoft.com/winfx/2006/xaml"
    xmlns:local="using:BingMapsLesson"
    xmlns:d="http://schemas.microsoft.com/expression/blend/2008"
    xmlns:mc="http://schemas.openxmlformats.org/markup-compatibility/2006"
    xmlns:Map="using:DevExpress.UI.Xaml.Map"
    x:Class="BingMapsLesson.MainPage"
    mc:Ignorable="d">
    <Grid Background="{StaticResource ApplicationPageBackgroundThemeBrush}">
        <Map:MapControl ZoomLevel="3" >
            <Map:MapControl.Layers>
                <Map:ImageTilesLayer>
                    <Map:ImageTilesLayer.DataProvider>
                        <Map:BingMapDataProvider Kind="Area"
                             BingKey="YOUR BING MAPS KEY" />
                    </Map:ImageTilesLayer.DataProvider>
                </Map:ImageTilesLayer>
            </Map:MapControl.Layers>
        </Map:MapControl>
    </Grid>
</Page>
```

NavigationPanelOptions Property

Provides access to the navigation panel options of a map control.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property NavigationPanelOptions As NavigationPanelOptions
```

C#

```
public NavigationPanelOptions NavigationPanelOptions { get; set; }
```

Property Value

A NavigationPanelOptions object that contains the navigation panel settings.

Remarks

Use the **NavigationPanelOptions** property to access the navigation panel settings. After that, it becomes possible to control the visibility of navigation panel elements (e.g., NavigationPanelOptions.ShowScrollButtons, NavigationPanelOptions.ShowKilometersScale).

ScrollCommand Property

Returns a command that scrolls a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public ReadOnly Property ScrollCommand As ICommand
```
C#
```
public ICommand ScrollCommand { get; }
```

Property Value

An object that defines a command implementing the System.Windows.Input.ICommand interface.

SelectionMode Property

Gets or sets a value specifying how the map control is selected.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property SelectionMode As ElementSelectionMode
```
C#
```
public ElementSelectionMode SelectionMode { get; set; }
```

Property Value

An ElementSelectionMode enumeration member specifying the map's selection behavior.

ToolTipEnabled Property

Gets or sets a value that specifies whether or not tooltips are enabled for a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ToolTipEnabled As Boolean
```

C#

```
public bool ToolTipEnabled { get; set; }
```

Property Value

True - tooltips are enabled for a map; **False** - tooltips are disabled.

ToolTipInfo Property

Provides access to the ToolTipInfo object that contains settings of built-in map tooltips.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ToolTipInfo As ToolTipInfo
```

C#

```
public ToolTipInfo ToolTipInfo { get; }
```

Property Value

A ToolTipInfo object.

ToolTipTemplate Property

Gets or sets the template that defines the presentation of the map tooltip.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ToolTipTemplate As DataTemplate
```

C#

```
public DataTemplate ToolTipTemplate { get; set; }
```

Property Value

A **System.Windows.DataTemplate** object that contains the map template.

ZoomCommand Property

Returns a command that zooms a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ZoomCommand As ICommand
```

C#

```
public ICommand ZoomCommand { get; }
```

Property Value

An object that defines a command implementing the System.Windows.Input.ICommand interface.

ZoomLevel Property

Gets or sets the current zoom level of a Map Control.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ZoomLevel As Double
```

C#

```
public Double ZoomLevel { get; set; }
```

Property Value

A double value specifying the current zoom level.

Example

Show Me

MapControl Events

A Map control to display raster and vector maps.

The following tables list the members exposed by the MapControl type.

Public Events

	Name	Description
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	Drop	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	GotFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	Holding	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabledChanged	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	KeyDown	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUp	(Inherited from **Windows.UI.Xaml.UIElement**)
	LayoutUpdated	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loading	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LostFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ManipulationDelta	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCanceled	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLost	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEntered	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExited	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMoved	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressed	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleased	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChanged	(Inherited from **Windows.UI.Xaml.UIElement**)
	RightTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	SelectionChanged	Occurs when the map selection is changed.
	SizeChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Tapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	Unloaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

SelectionChanged Event

Occurs when the map selection is changed.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
event Public SelectionChanged As ElementSelectionChangedEventHandler
```

C#

```
public event ElementSelectionChangedEventHandler SelectionChanged
```

Event Data

The event handler receives an argument of type ElementSelectionChangedEventArgs containing data related to this event.
The following **ElementSelectionChangedEventArgs** properties provide information specific to this event.

Property	Description
Selection	Returns the list of currently selected objects.

MapControl Methods

A Map control to display raster and vector maps.

The following tables list the members exposed by the MapControl type.

Public Methods

	Name	Description
	AddHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	ApplyTemplate	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanScroll	Checks whether or not it is possible to scroll a map by the specified offset.
	CanZoom	Checks whether or not it is possible to zoom a map by the specified zoom level.
	CapturePointer	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	Equals	(Inherited from **System.Object**)
	FindName	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Focus	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetBindingExpression	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

© 2018 Developer Express Inc.

	GetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	InvalidateArrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	InvalidateMeasure	(Inherited from **Windows.UI.Xaml.UIElement**)
	Measure	(Inherited from **Windows.UI.Xaml.UIElement**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReleasePointerCapture	(Inherited from **Windows.UI.Xaml.UIElement**)
	ReleasePointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	RemoveHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	Scroll	Scrolls a map by the specified offset.
	SetBinding	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	SetIsTemplateFocusTarget	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	StartDragAsync	(Inherited from **Windows.UI.Xaml.UIElement**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

CanScroll Method

Checks whether or not it is possible to scroll a map by the specified offset.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Function CanScroll(
   ByVal offset As Point
) As Boolean
```

C#

```
public bool CanScroll(
   Point offset
)
```

Parameters

offset
A **System.Windows.Point** value specifying the offset by which a map should be scrolled.

Return Value

true, if scrolling is allowed; otherwise, **false**.

Remarks

To scroll a map, call the Scroll method.

See Also

CanZoom Method

Checks whether or not it is possible to zoom a map by the specified zoom level.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Function CanZoom(
   ByVal zoomLevel As Double
) As Boolean
```

C#

```
public bool CanZoom(
   Double zoomLevel
)
```

Parameters

zoomLevel
A double value specifying the level by which a map should be zoomed.

Return Value

true, if it is allowed to zoom; otherwise, **false**.

Scroll Method

Scrolls a map by the specified offset.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Sub Scroll(
   ByVal offset As Point
)
```
C#
```
public void Scroll(
   Point offset
)
```

Parameters
offset
A **System.Windows.Point** value specifying the offset by which a map should be scrolled.

Remarks

To verify whether or not it is possible to scroll a map, call the CanScroll method before calling the **Scroll** method.

Zooms a map to the specified level.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Sub Zoom(
   ByVal zoomLevel As Double
)
```
C#
```
public void Zoom(
   Double zoomLevel
)
```

Parameters
zoomLevel
An integer value specifying the level to which a map should be zoomed.

Remarks

To verify whether or not it is possible to zoom a map, call the CanZoom method before calling the **Zoom** method.

See Also

Zooms a map to the specified level around the specified anchor point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Sub Zoom(
   ByVal zoomLevel As Double,
   ByVal anchorPoint As Point
)
```
C#
```
public void Zoom(
   Double zoomLevel,
   Point anchorPoint
)
```

© 2018 Developer Express Inc.

Parameters
zoomLevel
An integer value specifying the level to which a map should be zoomed.
anchorPoint
An anchor point.

Remarks

To verify whether or not it is possible to zoom a map, call the CanZoom method before calling the **Zoom** method.

MapCustomElement Class

The class used to draw any custom element on a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class MapCustomElement Inherits MapVisualItem
```

C#

```
public class MapCustomElement : MapVisualItem
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject

MapCustomElement Members

The class used to draw any custom element on a map.

The following tables list the members exposed by the MapCustomElement type.

Public Constructors

	Name	Description
	MapCustomElement	Initializes a new instance of the MapCustomElement class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item. (Inherited from **MapItem**)
	Content	Gets or sets the custom element's content. This is a dependency property.
	ContentTemplate	Gets or sets the template that defines the presentation of the element's content, represented by the Content property. This is a dependency property.
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result. (Inherited from **MapItem**)
	Layer	Provides access to the map items layer object. (Inherited from **MapItem**)
	Location	Gets or sets a location of the custom element on a map.
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item. (Inherited from **MapItem**)
	Visible	Gets or sets a value indicating whether or not a map item should be displayed. (Inherited from **MapItem**)

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)

© 2018 Developer Express Inc.

	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	ContentProperty	Identifies the Content dependency property.
S	ContentTemplateProperty	Identifies the ContentTemplate dependency property.
S	IsHitTestVisibleProperty	Identifies the IsHitTestVisible dependency property. (Inherited from **MapItem**)

© 2018 Developer Express Inc.

	LocationProperty	Identifies the Location dependency property.
	ToolTipPatternProperty	Identifies the ToolTipPattern dependency property. (Inherited from **MapItem**)
	VisibleProperty	Identifies the Visible dependency property. (Inherited from **MapItem**)

Public Events

	Name	Description
	PointerPressed	Occurs when a mouse pointer hovers over the MapCustomElement, and the left mouse button has been pressed. (Inherited from **MapVisualItem**)
	PointerReleased	Occurs when a mouse pointer hovers over the MapCustomElement, and the left mouse button has been released. (Inherited from **MapVisualItem**)
	PropertyChanged	Occurs every time any of the MapCustomElement class properties has changed its value. (Inherited from **MapDependencyObject**)

MapCustomElement Properties

The class used to draw any custom element on a map.

The following tables list the members exposed by the MapCustomElement type.

Public Constructors

	Name	Description
	MapCustomElement	Initializes a new instance of the MapCustomElement class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item. (Inherited from **MapItem**)
	Content	Gets or sets the custom element's content. This is a dependency property.
	ContentTemplate	Gets or sets the template that defines the presentation of the element's content, represented by the Content property. This is a dependency property.
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result. (Inherited from **MapItem**)
	Layer	Provides access to the map items layer object. (Inherited from **MapItem**)
	Location	Gets or sets a location of the custom element on a map.
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item. (Inherited from **MapItem**)
	Visible	Gets or sets a value indicating whether or not a map item should be displayed. (Inherited from **MapItem**)

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)

© 2018 Developer Express Inc.

	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)

Content Property

Gets or sets the custom element's content. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Content As Object
```

C#

```
public object Content { get; set; }
```

Property Value

A System.Object value that is the custom element's content.

See Also

ContentTemplate Property

Gets or sets the template that defines the presentation of the element's content, represented by the Content property. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ContentTemplate As DataTemplate
```

C#

```
public DataTemplate ContentTemplate { get; set; }
```

Property Value

A DataTemplate object, representing the template which defines the presentation of the element's content.

Location Property

Gets or sets a location of the custom element on a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Location As GeoPoint
```

C#

```
public GeoPoint Location { get; set; }
```

Property Value

A GeoPoint object containing geographical coordinates of the element location.

MapDataProviderBase Class

The base class for all data providers.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class MapDataProviderBase Inherits MapDependencyObject, IOwnedElement,
  ICacheOptionsProvider,
  IDisposable
```

C#

```
public abstract class MapDataProviderBase : MapDependencyObject, IOwnedElement,
  ICacheOptionsProvider,
  IDisposable
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject
          MapDependencyObject

MapDataProviderBase Members

The base class for all data providers.

The following tables list the members exposed by the MapDataProviderBase type.

Public Constructors

	Name	Description
	MapDataProviderBase	Initializes a new instance of the MapDataProviderBase class with default settings.

Public Properties

	Name	Description
	CacheOptions	Gets or sets the settings for a map's cache.
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Owner	Provides access to the owner of the current data provider.
	Projection	Returns the projection supported by the current map provider.
	TileSource	Returns a tile source associated with the current data provider.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Dispose	Disposes the MapDataProviderBase object.
S	Equals	(Inherited from **System.Object**)

CacheOptions Property

Gets or sets the settings for a map's cache.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property CacheOptions As CacheOptions
```

C#

```
public CacheOptions CacheOptions { get; set; }
```

Property Value

A CacheOptions object.

Owner Property

Provides access to the owner of the current data provider.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Owner As Object
```

C#

```
public object Owner { get; set; }
```

Property Value

A Object class descendant.

Remarks

This property is intended for internal use only.

Projection Property

Returns the projection supported by the current map provider.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
abstract Public ReadOnly Property Projection As ProjectionBase
```

C#

```
public abstract ProjectionBase Projection { get; }
```

Property Value

A ProjectionBase class descendant.

TileSource Property

Returns a tile source associated with the current data provider.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property TileSource As MapTileSourceBase
```

C#

```
public MapTileSourceBase TileSource { get; }
```

Property Value

A MapTileSourceBase class descendant that contains settings to obtain image tiles from a specific data provider.

MapDataProviderBase Methods

The base class for all data providers.

The following tables list the members exposed by the MapDataProviderBase type.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Dispose	Disposes the MapDataProviderBase object.
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetMapSizeInPixels	Returns the map size (in pixels) for the specified zoom level.
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

© 2018 Developer Express Inc.

	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

See Also
MapDataProviderBase Members
DevExpress.UI.Xaml.Map Namespace

Dispose Method

Disposes the MapDataProviderBase object.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Sub Dispose()
```

C#

```
public void Dispose()
```

Remarks

Call the **Dispose** method when you have finished working with a manually created MapDataProviderBase object. This releases all the resources allocated to the object and speeds up system performance.

GetMapSizeInPixels Method

Returns the map size (in pixels) for the specified zoom level.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
abstract Public Function GetMapSizeInPixels(
   ByVal zoomLevel As Double
) As Size
```

C#

```
public abstract Size GetMapSizeInPixels(
   Double zoomLevel
)
```

Parameters

zoomLevel
A double value representing the map zoom level.

Return Value

A Size object that is the map size.

MapDependencyObject Class

Enables WinRT property system services for its derived model classes.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class MapDependencyObject Inherits DependencyObject, INotifyPropertyChanged
```

C#

```
public abstract class MapDependencyObject : DependencyObject, INotifyPropertyChanged
```

Remarks

For more information, refer to the Windows.UI.Xaml.DependencyObject class description in MSDN.

PropertyChanged Event

Occurs every time any of the MapDependencyObject class properties has changed its value.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
event Public PropertyChanged As PropertyChangedEventHandler
```

C#

```
public event PropertyChangedEventHandler PropertyChanged
```

Event Data

The event handler receives an argument of type System.ComponentModel.PropertyChangedEventArgs containing data related to this event.

The following **PropertyChangedEventArgs** properties provide information specific to this event.

MapDot Members

The class used to draw a dot on a map.

The following tables list the members exposed by the MapDot type.

Public Constructors

	Name	Description
	MapDot	Initializes a new instance of the MapDot class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item. (Inherited from **MapItem**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Fill	Gets or sets the brush that specifies how the shape's interior is painted. (Inherited from **MapShape**)
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result. (Inherited from **MapItem**)
	Layer	Provides access to the map items layer object. (Inherited from **MapItem**)
	Location	Gets or sets a location of the map dot on a map.
	ShapeKind	Gets or sets a value specifying the shape that is used to draw a dot on a map.
	Size	Gets or sets the size of a map dot.
	Stroke	Gets or sets the Brush that specifies how the shape outline is painted. (Inherited from **MapShape**)
	StrokeStyle	Gets or sets the settings of the shape outline. (Inherited from **MapShape**)
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item. (Inherited from **MapItem**)
	Visible	Gets or sets a value indicating whether or not a map item should be displayed. (Inherited from **MapItem**)

Public Fields

	Name	Description
S	FillProperty	Identifies the Fill dependency property. (Inherited from **MapShape**)
S	IsHitTestVisibleProperty	Identifies the IsHitTestVisible dependency property. (Inherited from

© 2018 Developer Express Inc.

		MapItem)
S	LocationProperty	Identifies the Location dependency property.
S	ShapeKindProperty	Identifies the ShapeKind dependency property.
S	SizeProperty	Identifies the Size dependency property.
S	StrokeProperty	Identifies the Stroke dependency property. (Inherited from **MapShape**)
S	StrokeStyleProperty	Identifies the StrokeStyle dependency property. (Inherited from **MapShape**)
S	ToolTipPatternProperty	Identifies the ToolTipPattern dependency property. (Inherited from **MapItem**)
S	VisibleProperty	Identifies the Visible dependency property. (Inherited from **MapItem**)

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the MapDot class properties has changed its value. (Inherited from **MapDependencyObject**)

Location Property

Gets or sets a location of the map dot on a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Location As GeoPoint
```

C#

```
public GeoPoint Location { get; set; }
```

Property Value

A GeoPoint object containing geographic coordinates of the dot location.

See Also

ShapeKind Property

Gets or sets a value specifying the shape that is used to draw a dot on a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ShapeKind As MapDotShapeKind
```

C#

```
public MapDotShapeKind ShapeKind { get; set; }
```

Property Value

A MapDotShapeKind enumeration value specifying the shape kind.

See Also

Size Property

Gets or sets the size of a map dot.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Size As Double
```

C#

```
public Double Size { get; set; }
```

Property Value

A System.Double value, which stores a map dot's size (in pixels).

Remarks

The **Size** property specifies the height and width of a map dot.

MapDotShapeKind Enumeration

Lists the values used to specify the shape of map dots.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Enum MapDotShapeKind
```

C#

```
public enum MapDotShapeKind
```

Members

Name	Description
Circle	A map dot is painted as a circle.
Rectangle	A map dot is painted as a rectangle.

Remarks

The values listed by the **MapDotShapeKind** enumeration are used to set the MapDot.ShapeKind property.

MapElement Class

The base class for different map elements (e.g., layers).

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class MapElement Inherits Control, IOwnedElement,
  INotifyPropertyChanged
```

C#

```
public abstract class MapElement : Control, IOwnedElement,
  INotifyPropertyChanged
```

PropertyChanged Event

Occurs every time any of the MapElement class properties has changed its value.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
event Public PropertyChanged As PropertyChangedEventHandler
```

C#

```
public event PropertyChangedEventHandler PropertyChanged
```

Event Data

The event handler receives an argument of type System.ComponentModel.PropertyChangedEventArgs containing data related to this event.

The following **PropertyChangedEventArgs** properties provide information specific to this event.

Public Constructors

	Name	Description
	MapEllipse	Initializes a new instance of the MapEllipse class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item. (Inherited from **MapItem**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Fill	Gets or sets the brush that specifies how the shape's interior is painted. (Inherited from **MapShape**)
	Height	Gets or sets the height of the ellipse.
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result. (Inherited from **MapItem**)
	Layer	Provides access to the map items layer object. (Inherited from **MapItem**)
	Location	Gets or sets a location of the ellipse on a map.
	Stroke	Gets or sets the Brush that specifies how the shape outline is painted. (Inherited from **MapShape**)
	StrokeStyle	Gets or sets the settings of the shape outline. (Inherited from **MapShape**)
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item. (Inherited from **MapItem**)
	Visible	Gets or sets a value indicating whether or not a map item should be displayed. (Inherited from **MapItem**)
	Width	Gets or sets the width of the ellipse.

Public Methods

	Name	Description

© 2018 Developer Express Inc.

	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	Equals	(Inherited from **System.Object**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	FillProperty	Identifies the Fill dependency property. (Inherited from **MapShape**)
S	HeightProperty	Identifies the Height dependency property.

© 2018 Developer Express Inc.

	IsHitTestVisibleProperty	Identifies the IsHitTestVisible dependency property. (Inherited from **MapItem**)
	LocationProperty	Identifies the Location dependency property.
	StrokeProperty	Identifies the Stroke dependency property. (Inherited from **MapShape**)
	StrokeStyleProperty	Identifies the StrokeStyle dependency property. (Inherited from **MapShape**)
	ToolTipPatternProperty	Identifies the ToolTipPattern dependency property. (Inherited from **MapItem**)
	VisibleProperty	Identifies the Visible dependency property. (Inherited from **MapItem**)
	WidthProperty	Identifies the Width dependency property.

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the MapEllipse class properties has changed its value. (Inherited from **MapDependencyObject**)

MapEllipse Properties

The class used to draw an ellipse on a map.

The following tables list the members exposed by the MapEllipse type.

Public Constructors

	Name	Description
	MapEllipse	Initializes a new instance of the MapEllipse class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item. (Inherited from **MapItem**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Fill	Gets or sets the brush that specifies how the shape's interior is painted. (Inherited from **MapShape**)
	Height	Gets or sets the height of the ellipse.
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result. (Inherited from **MapItem**)
	Layer	Provides access to the map items layer object. (Inherited from **MapItem**)
	Location	Gets or sets a location of the ellipse on a map.
	Stroke	Gets or sets the Brush that specifies how the shape outline is painted. (Inherited from **MapShape**)
	StrokeStyle	Gets or sets the settings of the shape outline. (Inherited from **MapShape**)
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item. (Inherited from **MapItem**)
	Visible	Gets or sets a value indicating whether or not a map item should be displayed. (Inherited from **MapItem**)
	Width	Gets or sets the width of the ellipse.

Height Property

Gets or sets the height of the ellipse.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property Height As Double
```
C#
```
public Double Height { get; set; }
```

Property Value

A System.Double value specifying the height of the ellipse.

Location Property

Gets or sets a location of the ellipse on a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Location As GeoPoint
```

C#

```
public GeoPoint Location { get; set; }
```

Property Value

A GeoPoint object containing geographical coordinates of the ellipse location.

Width Property

Gets or sets the width of the ellipse.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Width As Double
```

C#

```
public Double Width { get; set; }
```

Property Value

A System.Double value specifying the width of the ellipse.

ReadAsync Method

Asynchronously reads a sequence of bytes from the specified file source and advances the position within the stream by the number of bytes read.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overridable Public Sub ReadAsync(
   ByVal fileSource As MapFileSourceBase,
   ByVal token As CancellationToken,
   ByVal layer As VectorFileLayer
)
```
C#
```
public virtual void ReadAsync(
   MapFileSourceBase fileSource,
   CancellationToken token,
   VectorFileLayer layer
)
```

Parameters
fileSource
A MapFileSourceBase class descendant.
token
A System.Threading.CancellationToken object to monitor for cancellation requests.
layer
A VectorFileLayer object.

Release Method

Releases the resources of the file reader.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
abstract Public Sub Release()
```
C#
```
public abstract void Release()
```

SourceFilePathChanged Event

Occurs when the source file path has been changed.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
event Public SourceFilePathChanged As EventHandler
```

C#

```
public event EventHandler SourceFilePathChanged
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

GetFileStream Method

Returns the file stream associated with this file source.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
abstract Public Function GetFileStream(
   ByVal fileName As String,
   ByVal token As CancellationToken
) As IRandomAccessStream
```

C#

```
public abstract IRandomAccessStream GetFileStream(
   string fileName,
   CancellationToken token
)
```

Parameters

fileName
A string specifying the file name.
token
A System.Threading.CancellationToken object to monitor for cancellation requests.

Return Value

An object implementing the IRandomAccessStream interface.

GetSourceFileName Method

Returns the name of a source file.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
abstract Public Function GetSourceFileName() As String
```
C#
```
public abstract string GetSourceFileName()
```

Return Value

A String value.

FileUrl Property

Gets or sets a Url that defines the location of a file containing data.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property FileUrl As String
```

C#

```
public string FileUrl { get; set; }
```

Property Value

A String value.

MapHttpFileSource Methods

Represents a source that loads a file using the Http URL.

The following tables list the members exposed by the MapHttpFileSource type.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	Equals	(Inherited from **System.Object**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetFileStream	Returns the file stream associated with this file source.
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetSourceFileName	Returns the name of a source file.
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

© 2018 Developer Express Inc.

	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

GetFileStream Method

Returns the file stream associated with this file source.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GetFileStream(
   ByVal fileName As String,
   ByVal token As CancellationToken
) As IRandomAccessStream
```

C#

```
public override IRandomAccessStream GetFileStream(
   string fileName,
   CancellationToken token
)
```

Parameters

fileName
A string specifying the file name.
token
A System.Threading.CancellationToken object to monitor for cancellation requests.

Return Value

An object implementing the IRandomAccessStream interface.

GetSourceFileName Method

Returns the name of a source file.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Function GetSourceFileName() As String
```
C#
```
public override string GetSourceFileName()
```

Return Value

A String value.

MapItem Class

The base class for different map items.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class MapItem Inherits MapDependencyObject, IOwnedElement,
  ISelectableItem
```

C#

```
public abstract class MapItem : MapDependencyObject, IOwnedElement,
  ISelectableItem
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject
          MapDependencyObject

MapItem Members

The base class for different map items.

The following tables list the members exposed by the MapItem type.

Public Constructors

	Name	Description
	MapItem	Initializes a new instance of the MapItem class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item.
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result.
	Layer	Provides access to the map items layer object.
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item.
	Visible	Gets or sets a value indicating whether or not a map item should be displayed.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

© 2018 Developer Express Inc.

	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	IsHitTestVisibleProperty	Identifies the IsHitTestVisible dependency property.
S	ToolTipPatternProperty	Identifies the ToolTipPattern dependency property.
S	VisibleProperty	Identifies the Visible dependency property.

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the MapItem class properties has changed its value. (Inherited from **MapDependencyObject**)

MapItem Properties

The base class for different map items.

The following tables list the members exposed by the MapItem type.

Public Constructors

	Name	Description
	MapItem	Initializes a new instance of the MapItem class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item.
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result.
	Layer	Provides access to the map items layer object.
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item.
	Visible	Gets or sets a value indicating whether or not a map item should be displayed.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

© 2018 Developer Express Inc.

	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	IsHitTestVisibleProperty	Identifies the IsHitTestVisible dependency property.
S	ToolTipPatternProperty	Identifies the ToolTipPattern dependency property.
S	VisibleProperty	Identifies the Visible dependency property.

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the MapItem class properties has changed its value. (Inherited from **MapDependencyObject**)

Attributes Property

Gets the attributes for this map item.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Attributes As MapItemAttributeCollection
```

C#

```
public MapItemAttributeCollection Attributes { get; }
```

Property Value

A MapItemAttributeCollection object.

See Also

MapItem Class
MapItem Members
DevExpress.UI.Xaml.Map Namespace

© 2018 Developer Express Inc.

IsHitTestVisible Property

Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property IsHitTestVisible As Boolean
```

C#

```
public bool IsHitTestVisible { get; set; }
```

Property Value

true if the map item can be shown as the result of hit testing; otherwise **false**.

Remarks

If the **IsHitTestVisible** property is set to **false**, the map item ignores any input events and hit testing. So by default, this property is set to **true**.

Layer Property

Provides access to the map items layer object.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Layer As MapItemsLayerBase
```

C#

```
public MapItemsLayerBase Layer { get; }
```

Property Value

A MapItemsLayerBase object representing the items layer of a map control.

ToolTipPattern Property

Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ToolTipPattern As String
```

C#

```
public string ToolTipPattern { get; set; }
```

Property Value

A string value that is the tooltip pattern.

Visible Property

Gets or sets a value indicating whether or not a map item should be displayed.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Visible As Boolean
```

C#

```
public bool Visible { get; set; }
```

Property Value

true to display a map item; otherwise, **false**.

MapItemAttribute Class

An attribute that can be applied to map items.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class MapItemAttribute Inherits Object, INotifyPropertyChanged
```

C#

```
public class MapItemAttribute : object, INotifyPropertyChanged
```

Inheritance Hierarchy

System.Object
    MapItemAttribute

MapItemAttribute Members

An attribute that can be applied to map items.

The following tables list the members exposed by the MapItemAttribute type.

Public Constructors

	Name	Description
	MapItemAttribute	Initializes a new instance of the MapItemAttribute class with default settings.

Public Properties

	Name	Description
	Name	Gets the attribute's name.
	Type	Gets or sets the type of an attribute.
	Value	Gets the attribute's value.

Public Methods

	Name	Description
	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Object**)
	GetHashCode	(Inherited from **System.Object**)
	GetType	(Inherited from **System.Object**)
	ReferenceEquals	(Inherited from **System.Object**)
	ToString	(Inherited from **System.Object**)

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the MapItemAttribute class properties has changed its value.

Name Property

Gets the attribute's name.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Name As String
```

C#

```
public string Name { get; set; }
```

Property Value

A System.String value that specifies the attribute's name.

PropertyChanged Event

Occurs every time any of the MapItemAttribute class properties has changed its value.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
event Public PropertyChanged As PropertyChangedEventHandler
```

C#

```
public event PropertyChangedEventHandler PropertyChanged
```

Event Data

The event handler receives an argument of type System.ComponentModel.PropertyChangedEventArgs containing data related to this event.

The following **PropertyChangedEventArgs** properties provide information specific to this event.

Item Property

Provides access to individual map items in the collection by their names.

Overload List

Name	Description
MapItemAttribute this[string name] { get; }	Provides access to individual map items in the collection by their names.
T this[int index] { get; set; }	Inherited from **System.Collections.ObjectModel.Collection<T>**

See Also
MapItemAttributeCollection Class
MapItemAttributeCollection Members
DevExpress.UI.Xaml.Map Namespace
MapItemAttributeCollection.Item Overload List

Provides access to individual map items in the collection by their names.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public ReadOnly Property Item(
   ByVal name As String
) As MapItemAttribute
```
C#
```
public MapItemAttribute this[
   string name
] { get; }
```

Parameters
name
A System.String value specifying the name of the map item to get.

Property Value

A MapItem class descendant which is the map item with the specified name.

Remarks

This property searches the collection for the map item whose name matches the specified value, and returns this map item. If no such map item is found, the indexer returns **null** (**Nothing** in Visual Basic).

MapItemCollection Constructor

Initializes a new instance of the MapItemCollection class with the specified owner.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public New(
   ByVal layer As MapItemsLayerBase
)
```

C#

```
public MapItemCollection(
   MapItemsLayerBase layer
)
```

Parameters

layer
A MapItemsLayerBase class descendant that is the owner of this map item collection.

C#

```
public MapItemEventArgs(
   MapItem item
)
```

Parameters

item
A MapItem object specifying the map item for the event. This value is assigned to the Item property.

Remarks

Instances of the MapItemEventArgs class are automatically created, initialized and passed to the corresponding event handlers.

MapItemEventArgs Properties

Provides data for the VectorFileLayer.MapItemLoaded event.

The following tables list the members exposed by the MapItemEventArgs type.

Public Constructors

	Name	Description
	MapItemEventArgs	Initializes a new instance of the MapItemEventArgs class with the specified map item.

Public Properties

	Name	Description
	Item	Provides access to the map item, for which this event has been raised.

Public Methods

	Name	Description
	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Object**)
	GetHashCode	(Inherited from **System.Object**)
	GetType	(Inherited from **System.Object**)
	ReferenceEquals	(Inherited from **System.Object**)
	ToString	(Inherited from **System.Object**)

Item Property

Provides access to the map item, for which this event has been raised.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Item As MapItem
```

C#

```
public MapItem Item { get; }
```

Property Value

A MapItem object.

MapItemEventHandler Delegate

A method that will handle the VectorFileLayer.MapItemLoaded event.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Delegate Sub MapItemEventHandler(
   ByVal sender As Object,
   ByVal e As MapItemEventArgs
)
```

C#

```
public delegate void MapItemEventHandler(
   object sender,
   MapItemEventArgs e
)
```

Parameters

The declaration of your event handler must have the same parameters as the **MapItemEventHandler** delegate declaration.
sender
The event source.
e
A MapItemEventArgs object that contains event data.

Remarks

When creating a MapItemEventHandler delegate, you identify the method that will handle the corresponding event. To associate an event with your event handler, add a delegate instance to this event. The event handler is called whenever the event occurs, unless you remove the delegate. For more information about event handler delegates, see **Events and Delegates** in **MSDN**.

MapItemsLayerBase Class

The base class for layers that display map items.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class MapItemsLayerBase Inherits LayerBase, ILayerMapItemCollectionOwner,
  ISelectedItemsOwner(of Object)
```

C#

```
public abstract class MapItemsLayerBase : LayerBase, ILayerMapItemCollectionOwner,
  ISelectedItemsOwner<Object>
```

InitialMapSize Property

Gets or sets the size of a map shape tile to provide a map projection.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property InitialMapSize As Size
```

C#

```
public Size InitialMapSize { get; set; }
```

Property Value

A **System.Windows.Size** value containing the size of the map tiles that correspond to the zero zoom level.

Remarks

Use the **InitialMapSize** property to get a map projection (e.g., Lambert, Behrmann, Tristan Edwards equal map projections) and avoid distortions of a vector layer's elements on a plane.

Example

Show Me	
A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T196064.	

To customize equal-area projection, do the following.

- Set an EqualAreaProjection object to the MapProjection property of a vector data layer.
- Specify its Width/Height ratio. To do this, assign this ratio based size to the InitialMapSize property of the vector data layer.

Xaml

MapProjection Property

Gets or sets the current projection used by this MapItemsLayerBase object.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property MapProjection As ProjectionBase
```

C#

```
public ProjectionBase MapProjection { get; set; }
```

Property Value

A ProjectionBase class descendant.

SelectedItem Property

Gets or sets the currently selected item on a layer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedItem As Object
```

C#

```
public object SelectedItem { get; set; }
```

Property Value

An object that is the currently selected map item.

SelectedItemBrush Property

Gets or sets the brush that specifies how the selected item outline is painted.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedItemBrush As SolidColorBrush
```

C#

```
public SolidColorBrush SelectedItemBrush { get; set; }
```

Property Value

A SolidColorBrush object value that specifies how the selected item outline is painted.

SelectedItems Property

Gets or sets the collection of selected items on this layer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property SelectedItems As IList(of Object)
```
C#
```
public IList<Object> SelectedItems { get; set; }
```

Property Value

A list of objects representing the collection of selected map items.

ToolTipPattern Property

Gets or sets a string that is the pattern specifying the text to be displayed within a tooltip.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property ToolTipPattern As String
```
C#
```
public string ToolTipPattern { get; set; }
```

Property Value

A System.String that is the tooltip pattern.

MapLine Members

The class used to draw a line on a map.

The following tables list the members exposed by the MapLine type.

Public Constructors

	Name	Description
	MapLine	Initializes a new instance of the MapLine class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item. (Inherited from **MapItem**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Fill	Gets or sets the brush that specifies how the shape's interior is painted. (Inherited from **MapShape**)
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result. (Inherited from **MapItem**)
	Layer	Provides access to the map items layer object. (Inherited from **MapItem**)
	Point1	Gets or sets the first coordinate of a line.
	Point2	Gets or sets the second coordinate of a line.
	Stroke	Gets or sets the Brush that specifies how the shape outline is painted. (Inherited from **MapShape**)
	StrokeStyle	Gets or sets the settings of the shape outline. (Inherited from **MapShape**)
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item. (Inherited from **MapItem**)
	Visible	Gets or sets a value indicating whether or not a map item should be displayed. (Inherited from **MapItem**)

Public Methods

MapLine Properties

The class used to draw a line on a map.

The following tables list the members exposed by the MapLine type.

Public Constructors

	Name	Description
	MapLine	Initializes a new instance of the MapLine class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item. (Inherited from **MapItem**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Fill	Gets or sets the brush that specifies how the shape's interior is painted. (Inherited from **MapShape**)
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result. (Inherited from **MapItem**)
	Layer	Provides access to the map items layer object. (Inherited from **MapItem**)
	Point1	Gets or sets the first coordinate of a line.
	Point2	Gets or sets the second coordinate of a line.
	Stroke	Gets or sets the Brush that specifies how the shape outline is painted. (Inherited from **MapShape**)
	StrokeStyle	Gets or sets the settings of the shape outline. (Inherited from **MapShape**)
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item. (Inherited from **MapItem**)
	Visible	Gets or sets a value indicating whether or not a map item should be displayed. (Inherited from **MapItem**)

Point1 Property

Gets or sets the first coordinate of a line.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Point1 As GeoPoint
```

C#

```
public GeoPoint Point1 { get; set; }
```

Property Value

A GeoPoint object that stores the line start.

Point2 Property

Gets or sets the second coordinate of a line.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Point2 As GeoPoint
```

C#

```
public GeoPoint Point2 { get; set; }
```

Property Value

A GeoPoint object that stores the line end.

GetFileStream Method

Returns the file stream associated with this file source.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Function GetFileStream(
   ByVal fileName As String,
   ByVal token As CancellationToken
) As IRandomAccessStream
```
C#
```
public override IRandomAccessStream GetFileStream(
   string fileName,
   CancellationToken token
)
```

Parameters
fileName
A string specifying the file name.
token
A System.Threading.CancellationToken object to monitor for cancellation requests.

Return Value

An object implementing the IRandomAccessStream interface.

GetSourceFileName Method

Returns the name of a source file.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Function GetSourceFileName() As String
```
C#
```
public override string GetSourceFileName()
```

Return Value

A String value.

Data Property

Gets or sets a geometry that specifies the shape to be drawn.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Data As MapGeometry
```

C#

```
public MapGeometry Data { get; set; }
```

Property Value

A DevExpress.UI.Xaml.Map.MapGeometry object that contains a description of the shape to be drawn.

MapPolygon Properties

The class used to draw a polygon on a map.

The following tables list the members exposed by the MapPolygon type.

Public Constructors

	Name	Description
	MapPolygon	Initializes a new instance of the MapPolygon class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item. (Inherited from **MapItem**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Fill	Gets or sets the brush that specifies how the shape's interior is painted. (Inherited from **MapShape**)
	FillRule	Gets or sets a value that specifies how the interior fill of the shape is determined.
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result. (Inherited from **MapItem**)
	Layer	Provides access to the map items layer object. (Inherited from **MapItem**)
	Points	Gets or sets a collection that contains the vertex points of the polygon.
	Stroke	Gets or sets the Brush that specifies how the shape outline is painted. (Inherited from **MapShape**)
	StrokeStyle	Gets or sets the settings of the shape outline. (Inherited from **MapShape**)
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item. (Inherited from **MapItem**)
	Visible	Gets or sets a value indicating whether or not a map item should be displayed. (Inherited from **MapItem**)

FillRule Property

Gets or sets a value that specifies how the interior fill of the shape is determined.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property FillRule As FillRule
```

C#

```
public FillRule FillRule { get; set; }
```

Property Value

A **System.Windows.Media.FillRule** enumeration value.

Points Property

Gets or sets a collection that contains the vertex points of the polygon.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Points As GeoPointCollection
```

C#

```
public GeoPointCollection Points { get; set; }
```

Property Value

A GeoPointCollection object that contains the vertex points of the polygon.

FillRule Property

Gets or sets a value that specifies how the interior fill of the shape is determined.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property FillRule As FillRule
```
C#
```
public FillRule FillRule { get; set; }
```

Property Value

A **System.Windows.Media.FillRule** enumeration value.

Points Property

Gets or sets a collection that contains the vertex points of the polyline.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Points As GeoPointCollection
```

C#

```
public GeoPointCollection Points { get; set; }
```

Property Value

A GeoPointCollection object that contains the vertex points of the polyline.

MapPushpin Class

The class used to draw a pushpin on a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class MapPushpin Inherits MapVisualItem
```

C#

```
public class MapPushpin : MapVisualItem
```

Remarks

A pushpin is a pointer that marks a geographical point on a map. An instance of a map pushpin is represented by the MapPushpin object that is a descendant of a VectorLayer object.

Use the Location property to specify the pushpin position on a map.

To learn more on pushpins, see the Vector Elements topic.

Location Property

Gets or sets coordinates for the pushpin element on a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Location As GeoPoint
```

C#

```
public GeoPoint Location { get; set; }
```

Property Value

A GeoPoint structure that defines a geographical point on the map for a pushpin element.

MarkerTemplate Property

Gets or sets the template that defines the presentation of the marker within a pushpin element. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property MarkerTemplate As DataTemplate
```

C#

```
public DataTemplate MarkerTemplate { get; set; }
```

Property Value

A **System.Windows.DataTemplate** object that defines an element's presentation.

TextBrush Property

Gets or sets a brush that is used to draw a text background for a map pushpin.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property TextBrush As Brush
```

C#

```
public Brush TextBrush { get; set; }
```

Property Value

A **System.Windows.Media.Brush** object that is the brush used to fill the pushpin's text.

MapRectangle Members

The class used to draw a rectangle on a map.

The following tables list the members exposed by the MapRectangle type.

Public Constructors

	Name	Description
	MapRectangle	Initializes a new instance of the MapRectangle class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item. (Inherited from **MapItem**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Fill	Gets or sets the brush that specifies how the shape's interior is painted. (Inherited from **MapShape**)
	Height	Gets or sets the height of the rectangle.
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result. (Inherited from **MapItem**)
	Layer	Provides access to the map items layer object. (Inherited from **MapItem**)
	Location	Gets or sets a location of the rectangle on a map.
	Stroke	Gets or sets the Brush that specifies how the shape outline is painted. (Inherited from **MapShape**)
	StrokeStyle	Gets or sets the settings of the shape outline. (Inherited from **MapShape**)
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item. (Inherited from **MapItem**)
	Visible	Gets or sets a value indicating whether or not a map item should be displayed. (Inherited from **MapItem**)
	Width	Gets or sets the width of the rectangle.

S	HeightProperty	Identifies the Height dependency property.

© 2018 Developer Express Inc.

	IsHitTestVisibleProperty	Identifies the IsHitTestVisible dependency property. (Inherited from **MapItem**)
	LocationProperty	Identifies the Location dependency property.
	StrokeProperty	Identifies the Stroke dependency property. (Inherited from **MapShape**)
	StrokeStyleProperty	Identifies the StrokeStyle dependency property. (Inherited from **MapShape**)
	ToolTipPatternProperty	Identifies the ToolTipPattern dependency property. (Inherited from **MapItem**)
	VisibleProperty	Identifies the Visible dependency property. (Inherited from **MapItem**)
	WidthProperty	Identifies the Width dependency property.

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the MapRectangle class properties has changed its value. (Inherited from **MapDependencyObject**)

MapRectangle Properties

The class used to draw a rectangle on a map.

The following tables list the members exposed by the MapRectangle type.

Public Constructors

	Name	Description
	MapRectangle	Initializes a new instance of the MapRectangle class with default settings.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item. (Inherited from **MapItem**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Fill	Gets or sets the brush that specifies how the shape's interior is painted. (Inherited from **MapShape**)
	Height	Gets or sets the height of the rectangle.
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result. (Inherited from **MapItem**)
	Layer	Provides access to the map items layer object. (Inherited from **MapItem**)
	Location	Gets or sets a location of the rectangle on a map.
	Stroke	Gets or sets the Brush that specifies how the shape outline is painted. (Inherited from **MapShape**)
	StrokeStyle	Gets or sets the settings of the shape outline. (Inherited from **MapShape**)
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item. (Inherited from **MapItem**)
	Visible	Gets or sets a value indicating whether or not a map item should be displayed. (Inherited from **MapItem**)
	Width	Gets or sets the width of the rectangle.

Public Methods

Height Property

Gets or sets the height of the rectangle.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property Height As Double
```
C#
```
public Double Height { get; set; }
```

Property Value

A System.Double value specifying the height of the rectangle.

Location Property

Gets or sets a location of the rectangle on a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Location As GeoPoint
```

C#

```
public GeoPoint Location { get; set; }
```

Property Value

A GeoPoint object containing geographical coordinates of the rectangle location.

Fill Property

Gets or sets the brush that specifies how the shape's interior is painted.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property Fill As SolidColorBrush
```

C#

```
public SolidColorBrush Fill { get; set; }
```

Property Value

A SolidColorBrush object that describes how the shape's interior is painted.

Stroke Property

Gets or sets the Brush that specifies how the shape outline is painted.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property Stroke As SolidColorBrush
```
C#
```
public SolidColorBrush Stroke { get; set; }
```

Property Value

A Windows.UI.Xaml.Media.SolidColorBrush value that specifies how the shape outline is painted.

StrokeStyle Property

Gets or sets the settings of the shape outline.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property StrokeStyle As StrokeStyle
```
C#
```
public StrokeStyle StrokeStyle { get; set; }
```

Property Value

A StrokeStyle object that stores settings of a shape outline.

GetFileStream Method

Returns the file stream associated with this file source.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Function GetFileStream(
   ByVal fileName As String,
   ByVal token As CancellationToken
) As IRandomAccessStream
```
C#
```
public override IRandomAccessStream GetFileStream(
   string fileName,
   CancellationToken token
)
```

Parameters
fileName
A string specifying the file name.
token
A System.Threading.CancellationToken object to monitor for cancellation requests.

Return Value

An object implementing the IRandomAccessStream interface.

MapTileSourceBase Constructor

Initializes a new instance of the MapTileSourceBase class with the specified settings.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public New(
   ByVal imageWidth As Integer,
   ByVal imageHeight As Integer,
   ByVal tileWidth As Integer,
   ByVal tileHeight As Integer,
   ByVal cacheOptionsProvider As ICacheOptionsProvider
)
```

C#

```
public MapTileSourceBase(
   int imageWidth,
   int imageHeight,
   int tileWidth,
   int tileHeight,
   ICacheOptionsProvider cacheOptionsProvider
)
```

Parameters

imageWidth
An integer value which specifies whole width of a map.
imageHeight
An integer value which specifies whole height of a map.
tileWidth
An integer value which specifies tile width.
tileHeight
An integer value which specifies tile height.
cacheOptionsProvider
An object implementing the DevExpress.UI.Xaml.Map.ICacheOptionsProvider interface that defines parameters of a local cache to store image tiles.

Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
abstract Public Function GetTileByZoomLevel(
   ByVal zoomLevel As Integer,
   ByVal tilePositionX As Integer,
   ByVal tilePositionY As Integer
) As Uri
```

C#

```
public abstract Uri GetTileByZoomLevel(
   int zoomLevel,
   int tilePositionX,
   int tilePositionY
)
```

Parameters

zoomLevel
A System.Int32 value specifying the zoom level.
tilePositionX
A System.Int32 value specifying the X position of the image tile.
tilePositionY
A System.Int32 value specifying the Y position of the image tile.

Return Value

A System.Uri value specifying the path to the image tile.

MapUnit Members

A class that contains a location in internal map units.

The following tables list the members exposed by the MapUnit type.

Public Constructors

	Name	Description
	MapUnit	Initializes a new instance of the MapUnit class with the specified qualitative argument and numerical value.

Public Properties

	Name	Description
	X	A horizontal coordinate of a MapUnit.
	Y	A vertical coordinate of a MapUnit.

Public Methods

	Name	Description
	Equals	Overloaded. Determines whether the specified object is equal to the current MapUnit instance.
S	Equals	Overloaded. Determines whether the two specified MapUnit objects are equal.
	GetHashCode	Gets the hash code (a number) that corresponds to the value of the current MapUnit object.
	GetType	(Inherited from **System.Object**)
S	Normalize	Normalizes the specified map unit's coordinates to a range from **0** to **1**.
S	Parse	Converts the string representation of a map unit to its MapUnit equivalent.
S	ReferenceEquals	(Inherited from **System.Object**)
	ToString	Overloaded. Returns the textual representation of MapUnit.

MapUnit Constructor

Initializes a new instance of the MapUnit class with the specified qualitative argument and numerical value.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public New(
   ByVal x As Double,
   ByVal y As Double
)
```

C#

```
public MapUnit(
   Double x,
   Double y
)
```

Parameters

x
A System.Double value which specifies the X position of the map unit. This value is assigned to the X property.
y
A System.Double value which specifies the Y position of the map unit. This value is assigned to the Y property.

MapUnit Properties

A class that contains a location in internal map units.

The following tables list the members exposed by the MapUnit type.

Public Constructors

	Name	Description
	MapUnit	Initializes a new instance of the MapUnit class with the specified qualitative argument and numerical value.

Public Properties

	Name	Description
	X	A horizontal coordinate of a MapUnit.
	Y	A vertical coordinate of a MapUnit.

Public Methods

	Name	Description
	Equals	Overloaded. Determines whether the specified object is equal to the current MapUnit instance.
S	Equals	Overloaded. Determines whether the two specified MapUnit objects are equal.
	GetHashCode	Gets the hash code (a number) that corresponds to the value of the current MapUnit object.
	GetType	(Inherited from **System.Object**)
S	Normalize	Normalizes the specified map unit's coordinates to a range from **0** to **1**.
S	Parse	Converts the string representation of a map unit to its MapUnit equivalent.
S	ReferenceEquals	(Inherited from **System.Object**)
	ToString	Overloaded. Returns the textual representation of MapUnit.

X Property

A horizontal coordinate of a MapUnit.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Property X As Double
```
C#
```
public Double X { get; set; }
```

Property Value

A System.Double value.

MapUnit Methods

A class that contains a location in internal map units.

The following tables list the members exposed by the MapUnit type.

Public Methods

	Name	Description
	Equals	Overloaded. Determines whether the specified object is equal to the current MapUnit instance.
S	Equals	Overloaded. Determines whether the two specified MapUnit objects are equal.
	GetHashCode	Gets the hash code (a number) that corresponds to the value of the current MapUnit object.
	GetType	(Inherited from **System.Object**)
S	Normalize	Normalizes the specified map unit's coordinates to a range from **0** to **1**.
S	Parse	Converts the string representation of a map unit to its MapUnit equivalent.
S	ReferenceEquals	(Inherited from **System.Object**)
	ToString	Overloaded. Returns the textual representation of MapUnit.

Equals Method

Determines whether the specified object is equal to the current MapUnit instance.

Overload List

Name	Description
bool Equals(object o)	Determines whether the specified object is equal to the current MapUnit instance.
static bool Equals(MapUnit unit1, MapUnit unit2)	Determines whether the two specified MapUnit objects are equal.
static bool Equals(object objA, object objB)	Inherited from **System.Object**

See Also
MapUnit Structure
MapUnit Members
DevExpress.UI.Xaml.Map Namespace
MapUnit.Equals Overload List

Determines whether the specified object is equal to the current MapUnit instance.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Function Equals(
   ByVal o As Object
) As Boolean
```
C#
```
public override bool Equals(
   object o
)
```

Parameters
o
The object to compare with the current object.

Return Value

true if the specified object is equal to the current MapUnit instance; otherwise **false**.

Remarks

Two MapUnit objects are considered equal if their X and Y property values are equal.

See Also
MapUnit Structure
MapUnit Members
DevExpress.UI.Xaml.Map Namespace
MapUnit.Equals Overload List

Determines whether the two specified MapUnit objects are equal.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic

© 2018 Developer Express Inc.

```
static Public Function Equals(
   ByVal unit1 As MapUnit,
   ByVal unit2 As MapUnit
) As Boolean
```

C#

```
public static bool Equals(
   MapUnit unit1,
   MapUnit unit2
)
```

Parameters

unit1
A MapUnit instance that specifies the first map unit to compare.
unit2
A MapUnit instance that specifies the second map unit to compare.

Return Value

true if specified objects are equal; otherwise **false**.

Remarks

Two MapUnit objects are considered equal if their X and Y property values are equal.

GetHashCode Method

Gets the hash code (a number) that corresponds to the value of the current MapUnit object.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GetHashCode() As Integer
```

C#

```
public override int GetHashCode()
```

Return Value

An integer value that is the hash code for the current object.

Remarks

This function supports the .NET infrastructure. For more information on hash codes, see the System.Object.GetHashCode topic in **MSDN**.

Normalize Method

Normalizes the specified map unit's coordinates to a range from **0** to **1**.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
static Public Function Normalize(
   ByVal mapUnit As MapUnit
) As MapUnit
```

C#

```
public static MapUnit Normalize(
   MapUnit mapUnit
)
```

Parameters

mapUnit
A non-normalized MapUnit object.

Return Value

A normalized MapUnit object.

Parse Method

Converts the string representation of a map unit to its MapUnit equivalent.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
static Public Function Parse(
   ByVal source As String
) As MapUnit
```
C#
```
public static MapUnit Parse(
   string source
)
```

Parameters
source
A string containing map unit coordinates, separated by a comma.

Return Value

A MapUnit object that is equivalent to the specified string.

MapUnit.ToString Overload List

Returns the textual representation of MapUnit.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Function ToString() As String
```
C#
```
public override string ToString()
```

Return Value

A System.String value, which is the textual representation of MapUnit.

See Also

MapUnit.ToString Overload List

Returns the textual representation of MapUnit.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Function ToString(
   ByVal provider As IFormatProvider
) As String
```
C#
```
public string ToString(
   IFormatProvider provider
)
```

Parameters
provider
An object, implementing the System.IFormatProvider interface.

Return Value

A System.String value, which is the textual representation of MapUnit.

MapVisualItem Members

The base class for visual map items.

The following tables list the members exposed by the MapVisualItem type.

Public Properties

	Name	Description
	Attributes	Gets the attributes for this map item. (Inherited from **MapItem**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	IsHitTestVisible	Gets or sets a value that defines whether or not a map item can be returned as a hit-testing result. (Inherited from **MapItem**)
	Layer	Provides access to the map items layer object. (Inherited from **MapItem**)
	ToolTipPattern	Gets or sets a string which represents the pattern specifying the text to be displayed within a tooltip that appears for a map item. (Inherited from **MapItem**)
	Visible	Gets or sets a value indicating whether or not a map item should be displayed. (Inherited from **MapItem**)

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	Equals	(Inherited from **System.Object**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)

© 2018 Developer Express Inc.

	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	IsHitTestVisibleProperty	Identifies the IsHitTestVisible dependency property. (Inherited from **MapItem**)
S	ToolTipPatternProperty	Identifies the ToolTipPattern dependency property. (Inherited from **MapItem**)
S	VisibleProperty	Identifies the Visible dependency property. (Inherited from **MapItem**)

Public Events

	Name	Description
	PointerPressed	Occurs when a mouse pointer hovers over the MapVisualItem, and the left mouse button has been pressed.
	PointerReleased	Occurs when a mouse pointer hovers over the MapVisualItem, and the left mouse button has been released.
	PropertyChanged	Occurs every time any of the MapVisualItem class properties has changed its value. (Inherited from **MapDependencyObject**)

PointerPressed Event

Occurs when a mouse pointer hovers over the MapVisualItem, and the left mouse button has been pressed.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
event Public PointerPressed As PointerEventHandler
```
C#
```
public event PointerEventHandler PointerPressed
```

Event Data

The event handler receives an argument of type Windows.UI.Xaml.Input.PointerRoutedEventArgs containing data related to this event.

The following **PointerRoutedEventArgs** properties provide information specific to this event.

Property	Description
Handled	
KeyModifiers	
Pointer

PointerReleased Event

Occurs when a mouse pointer hovers over the MapVisualItem, and the left mouse button has been released.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
event Public PointerReleased As PointerEventHandler
```

C#

```
public event PointerEventHandler PointerReleased
```

Event Data

The event handler receives an argument of type Windows.UI.Xaml.Input.PointerRoutedEventArgs containing data related to this event.

The following **PointerRoutedEventArgs** properties provide information specific to this event.

Property	Description
Handled	
KeyModifiers	
Pointer

MillerProjection Members

A class that defines methods specific to the Miller Projection.

The following tables list the members exposed by the MillerProjection type.

Public Constructors

	Name	Description
	MillerProjection	Initializes a new instance of the MillerProjection class with default settings.

Public Properties

	Name	Description
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	OffsetX	Gets or sets the horizontal offset for this projection. (Inherited from **ProjectionBase**)
	OffsetY	Gets or sets the vertical offset for this projection. (Inherited from **ProjectionBase**)
	ScaleX	Gets or sets a value that defines the ratio of map units to degrees of longitude (in radians). (Inherited from **ProjectionBase**)
	ScaleY	Gets or sets a value that defines the ratio of map units to degrees of latitude (in radians). (Inherited from **ProjectionBase**)

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
S	Equals	(Inherited from **System.Object**)
	GeoPointToMapUnit	Converts the specified geographical point into internal map units.
	GeoToKilometersSize	Converts the specified size in geographical points into the corresponding size in kilometers for

© 2018 Developer Express Inc.

		the specified anchor point. (Inherited from **ProjectionBase**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	KilometersToGeoSize	Converts the specified size in kilometers into the corresponding size in geographical points for the specified anchor point. (Inherited from **ProjectionBase**)
	MapUnitToGeoPoint	Converts the specified map unit into the corresponding geographical point.
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	LatToKilometersRatio	Defines the ratio of **1** latitude degree to **1** kilometer. (Inherited from **ProjectionBase**)
S	LonToKilometersRatio	Defines the ratio of **1** longitude degree to **1** kilometer. (Inherited from **ProjectionBase**)

© 2018 Developer Express Inc.

S	MaxLatitude	The maximum possible latitude for this projection.
S	MaxLongitude	The maximum possible longitude for this projection.
S	MinLatitude	The minimum possible latitude for this projection.
S	MinLongitude	The minimum possible longitude for this projection.

GeoPointToMapUnit Method

Converts the specified geographical point into internal map units.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GeoPointToMapUnit(
   ByVal geoPoint As GeoPoint
) As MapUnit
```

C#

```
public override MapUnit GeoPointToMapUnit(
   GeoPoint geoPoint
)
```

Parameters

geoPoint
A GeoPoint object to be converted.

Return Value

A MapUnit object containing internal map coordinates.

MapUnitToGeoPoint Method

Converts the specified map unit into the corresponding geographical point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function MapUnitToGeoPoint(
   ByVal mapUnit As MapUnit
) As GeoPoint
```

C#

```
public override GeoPoint MapUnitToGeoPoint(
   MapUnit mapUnit
)
```

Parameters

mapUnit
A MapUnit object to be converted.

Return Value

A GeoPoint object containing geographical coordinates.

Remarks

;

MultiScaleTileSource Constructor (Int64, Int64, int, int, int, ICacheOptionsProv

Initializes a new instance of the MultiScaleTileSource class with the specified settings.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public New(
   ByVal imageWidth As Int64,
   ByVal imageHeight As Int64,
   ByVal tileWidth As Integer,
   ByVal tileHeight As Integer,
   ByVal tileOverlap As Integer,
   ByVal cacheOptionsProvider As ICacheOptionsProvider
)
```

C#

```
public MultiScaleTileSource(
   Int64 imageWidth,
   Int64 imageHeight,
   int tileWidth,
   int tileHeight,
   int tileOverlap,
   ICacheOptionsProvider cacheOptionsProvider
)
```

Parameters

imageWidth
An integer value which specifies the width of the image.
imageHeight
An integer value which specifies the height of the image.
tileWidth
An integer value which specifies the width of the tile.
tileHeight
An integer value which specifies the height of the tile.
tileOverlap
An integer value which specifies the tile to overlap.
cacheOptionsProvider
An object implementing the DevExpress.UI.Xaml.Map.ICacheOptionsProvider interface that defines parameters of a local cache to store image tiles.

   Int64 imageWidth,
   Int64 imageHeight,
   int tileWidth,
   int tileHeight,
   int tileOverlap,
   ICacheOptionsProvider cacheOptionsProvider,
   int maxParallelDownloads
)
```

Parameters

imageWidth
An integer value which specifies the width of the image.
imageHeight
An integer value which specifies the height of the image.
tileWidth
An integer value which specifies the width of the tile.
tileHeight
An integer value which specifies the height of the tile.
tileOverlap
An integer value which specifies the tile to overlap.
cacheOptionsProvider
An object implementing the DevExpress.UI.Xaml.Map.ICacheOptionsProvider interface that defines parameters of a local cache to store image tiles.
maxParallelDownloads
An integer value which specifies the limit of simultaneously processed source queries.

MultiScaleTileSource Methods

The class that provides functionality to load image tiles for different zoom scales from an external image tile source.

The following tables list the members exposed by the MultiScaleTileSource type.

Public Methods

	Name	Description
	Dispose	Disposes the MultiScaleTileSource object.
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Object**)
	GetHashCode	(Inherited from **System.Object**)
	GetType	(Inherited from **System.Object**)
S	ReferenceEquals	(Inherited from **System.Object**)
	ToString	(Inherited from **System.Object**)

See Also
MultiScaleTileSource Members
DevExpress.UI.Xaml.Map Namespace

© 2018 Developer Express Inc.

Dispose Method

Disposes the MultiScaleTileSource object.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Sub Dispose()
```

C#

```
public void Dispose()
```

Remarks

Call the **Dispose** method when you have finished working with a manually created MultiScaleTileSource object. This releases all the resources allocated to the object and speeds up system performance.

NavigationPanelLocation Enumeration

Lists the values used to specify the location of a Navigation Panel.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Enum NavigationPanelLocation
```
C#
```
public enum NavigationPanelLocation
```

Members

Name	Description
Bottom	A navigation panel is docked to the bottom edge of the map.
Left	A navigation panel is docked to the left edge of the map.
Right	A navigation panel is docked to the right edge of the map.
Top	A navigation panel is docked to the top edge of the map.

Remarks

The values listed by the **NavigationPanelLocation** enumerator are used to set the NavigationPanelOptions.Location property.

NavigationPanelOptions Class

Contains options that define the appearance, position and layout of the Navigation Panel element.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class NavigationPanelOptions Inherits MapDependencyObject
```

C#

```
public class NavigationPanelOptions : MapDependencyObject
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject
          MapDependencyObject

NavigationPanelOptions Members

Contains options that define the appearance, position and layout of the Navigation Panel element.

The following tables list the members exposed by the NavigationPanelOptions type.

Public Constructors

	Name	Description
	NavigationPanelOptions	Initializes a new instance of the NavigationPanelOptions class with default settings.

Public Properties

	Name	Description
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	HorizontalAlignment	Returns the horizontal alignment of the Navigation Panel.
	Location	Specifies the location of a Navigation Panel.
	Orientation	Returns the orientation of the Navigation Panel.
	ShowCoordinates	Gets or sets a value indicating whether or not the **Coordinates** item should be displayed.
	ShowKilometersScale	Gets or sets a value indicating whether or not the **Kiliometers Scale** should be displayed.
	ShowMilesScale	Gets or sets a value indicating whether or not the **Miles Scale** should be displayed.
	ShowScrollButtons	Gets or sets a value indicating whether or not the **Scroll Buttons** should be displayed.
	ShowZoomTrackbar	Gets or sets a value indicating whether or not the **Zoom Trackbar** should be displayed.
	VerticalAlignment	Returns the vertical alignment of the Navigation Panel.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)

© 2018 Developer Express Inc.

	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
	LocationProperty	Identifies the Location dependency property.
	ShowCoordinatesProperty	Identifies the ShowCoordinates dependency property.
	ShowKilometersScaleProperty	Identifies the ShowKilometersScale dependency property.
	ShowMilesScaleProperty	Identifies the ShowMilesScale dependency property.
	ShowScrollButtonsProperty	Identifies the ShowScrollButtons dependency property.

© 2018 Developer Express Inc.

	ShowZoomTrackbarProperty	Identifies the ShowZoomTrackbar dependency property.

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the NavigationPanelOptions class properties has changed its value. (Inherited from **MapDependencyObject**)

OpenStreetMapDataProvider Class

The class that loads map images from a web resource that provides data in the **OpenStreetMap** format.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class OpenStreetMapDataProvider Inherits MapDataProviderBase
```

C#

```
public class OpenStreetMapDataProvider : MapDataProviderBase
```

Remarks

Before using map images in the **OpenStreetMap** format, please review the Copyright and License and Tile usage policy pages. To control which web resource should be used in your application as an **OpenStreetMap** data provider, you should assign a specific value for the TileUriTemplate property. Note that, by default, this property is set to obtain data from the OpenStreetMap official web service.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=E4322.

This lesson demonstrates how to create a simple map application which connects to the OpenStreetMap data provider.

Xaml

```
 (MainPage.xaml)
<Page
    xmlns="http://schemas.microsoft.com/winfx/2006/xaml/presentation"
    xmlns:x="http://schemas.microsoft.com/winfx/2006/xaml"
    xmlns:local="using:OpenStreetMapLesson"
    xmlns:d="http://schemas.microsoft.com/expression/blend/2008"
    xmlns:mc="http://schemas.openxmlformats.org/markup-compatibility/2006"
    xmlns:Map="using:DevExpress.UI.Xaml.Map"
    x:Class="OpenStreetMapLesson.MainPage"
    mc:Ignorable="d">
    <Grid Background="{StaticResource ApplicationPageBackgroundThemeBrush}">
        <Map:MapControl >
            <Map:MapControl.Layers>
                <Map:ImageTilesLayer>
                    <Map:ImageTilesLayer.DataProvider>
                        <Map:OpenStreetMapDataProvider/>
                    </Map:ImageTilesLayer.DataProvider>
                </Map:ImageTilesLayer>
            </Map:MapControl.Layers>
        </Map:MapControl>
    </Grid>
</Page>
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject
          MapDependencyObject

OpenStreetMapDataProvider Members

The class that loads map images from a web resource that provides data in the **OpenStreetMap** format.

The following tables list the members exposed by the OpenStreetMapDataProvider type.

Public Constructors

	Name	Description
	OpenStreetMapDataProvider	Initializes a new instance of the OpenStreetMapDataProvider class with default settings.

Public Properties

	Name	Description
	CacheOptions	Gets or sets the settings for a map's cache. (Inherited from **MapDataProviderBase**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Owner	Provides access to the owner of the current data provider. (Inherited from **MapDataProviderBase**)
	Projection	Returns the projection supported by the OpenStreetMapDataProvider.
	TileSource	Returns a tile source associated with the current data provider. (Inherited from **MapDataProviderBase**)
	TileUriTemplate	Gets or sets a template that is used to obtain image tiles from the current **OpenStreetMap** provider.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Dispose	Disposes the OpenStreetMapDataProvider object. (Inherited from **MapDataProviderBase**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)

© 2018 Developer Express Inc.

	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetMapSizeInPixels	Returns the map size (in pixels) for the specified zoom level.
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	TileUriTemplateProperty	Identifies the TileUriTemplate dependency property.

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the OpenStreetMapDataProvider class properties has changed its value. (Inherited from **MapDependencyObject**)

Projection Property

Returns the projection supported by the OpenStreetMapDataProvider.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public ReadOnly Property Projection As ProjectionBase
```
C#
```
public override ProjectionBase Projection { get; }
```

Property Value

Always SphericalMercatorProjection.

TileUriTemplate Property

Gets or sets a template that is used to obtain image tiles from the current **OpenStreetMap** provider.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property TileUriTemplate As String
```

C#

```
public string TileUriTemplate { get; set; }
```

Property Value

A System.String containing the template Uri.

Remarks

Before using map images in the **OpenStreetMap** format, please review the Copyright and License and Tile usage policy pages. To control which web resource should be used in your application as an **OpenStreetMap** data provider, you should assign specific values for the **TileUriTemplate** property. Note that by default, these properties are set to obtain data from the OpenStreetMap official web service.

GetMapSizeInPixels Method

Returns the map size (in pixels) for the specified zoom level.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic

```
Overrides Public Function GetMapSizeInPixels(
   ByVal zoomLevel As Double
) As Size
```

C#

```
public override Size GetMapSizeInPixels(
   Double zoomLevel
)
```

Parameters
zoomLevel
A double value representing the map zoom level.

Return Value

A Size object that is the map size.

GetTileByZoomLevel Method

Returns the path to the image tile using the X and Y positions for the required zoom level.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GetTileByZoomLevel(
   ByVal zoomLevel As Integer,
   ByVal tilePositionX As Integer,
   ByVal tilePositionY As Integer
) As Uri
```

C#

```
public override Uri GetTileByZoomLevel(
   int zoomLevel,
   int tilePositionX,
   int tilePositionY
)
```

Parameters

zoomLevel
A System.Int32 value specifying the zoom level.
tilePositionX
A System.Int32 value specifying the X position of the image tile.
tilePositionY
A System.Int32 value specifying the Y position of the image tile.

Return Value

A System.Uri value specifying the path to the image tile.

ProjectionBase Members

The base class for all projections used in the MapControl.

The following tables list the members exposed by the ProjectionBase type.

Public Properties

	Name	Description
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	OffsetX	Gets or sets the horizontal offset for this projection.
	OffsetY	Gets or sets the vertical offset for this projection.
	ScaleX	Gets or sets a value that defines the ratio of map units to degrees of longitude (in radians).
	ScaleY	Gets or sets a value that defines the ratio of map units to degrees of latitude (in radians).

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GeoPointToMapUnit	Converts the specified geographical point into internal map units.
	GeoToKilometersSize	Converts the specified size in geographical points into the corresponding size in kilometers for the specified anchor point.
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)

© 2018 Developer Express Inc.

	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	KilometersToGeoSize	Converts the specified size in kilometers into the corresponding size in geographical points for the specified anchor point.
	MapUnitToGeoPoint	Converts the specified map unit into the corresponding geographical point.
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)

GeoPointToMapUnit Method

Converts the specified geographical point into internal map units.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
abstract Public Function GeoPointToMapUnit(
   ByVal geoPoint As GeoPoint
) As MapUnit
```

C#

```
public abstract MapUnit GeoPointToMapUnit(
   GeoPoint geoPoint
)
```

Parameters

geoPoint
A GeoPoint object to be converted.

Return Value

A MapUnit object containing internal map coordinates.

GeoToKilometersSize Method

Converts the specified size in geographical points into the corresponding size in kilometers for the specified anchor point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overridable Public Function GeoToKilometersSize(
   ByVal anchorPoint As GeoPoint,
   ByVal size As Size
) As Size
```

C#

```
public virtual Size GeoToKilometersSize(
   GeoPoint anchorPoint,
   Size size
)
```

Parameters

anchorPoint
A GeoPoint object containing geographical coordinates for which it is necessary to convert the size.
size
A **System.Windows.Size** value specifying the size to be converted.

Return Value

A Size in kilometers.

KilometersToGeoSize Method

Converts the specified size in kilometers into the corresponding size in geographical points for the specified anchor point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overridable Public Function KilometersToGeoSize(
   ByVal anchorPoint As GeoPoint,
   ByVal size As Size
) As Size
```

C#

```
public virtual Size KilometersToGeoSize(
   GeoPoint anchorPoint,
   Size size
)
```

Parameters

anchorPoint
A GeoPoint object containing geographical coordinates for which it is necessary to convert the size.
size
A **System.Windows.Size** value specifying the size to be converted.

Return Value

A Size in geographical points.

MapUnitToGeoPoint Method

Converts the specified map unit into the corresponding geographical point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
abstract Public Function MapUnitToGeoPoint(
   ByVal mapPoint As MapUnit
) As GeoPoint
```

C#

```
public abstract GeoPoint MapUnitToGeoPoint(
   MapUnit mapPoint
)
```

Parameters

mapPoint
A MapUnit object to be converted.

Return Value

A GeoPoint object containing geographical coordinates.

AttributeName Property

Gets or sets the name of an attribute used as the value of the Coropleth colorizer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property AttributeName As String
```

C#

```
public string AttributeName { get; set; }
```

Property Value

A System.String object specifying the name of the attribute.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279980.

To create a analytical map, it is necessary to use the ChoroplethColorizer class. Perform the following steps to create the map.

- Provide a required vector map to map control. (To learn how to do this, refer to Providing Data).
- Create an ChoroplethColorizer object and assign it to the MapControl.Colorizer property.
- Specify the MapColorizer.Colors collection of the colorizer.
- Specify the ChoroplethColorizer.RangeStops collection of the colorizer.
- Specify the ChoroplethColorizer.ValueProvider property of the colorizer.

Xaml

```
 (MainPage.xaml)
<Map:MapControl.Colorizer>
    <Map:ChoroplethColorizer
        RangeStops="0 3000 10000 18000 28000 44000 82000 185000 1000000 2500000 15000000">
        <Map:ChoroplethColorizer.ValueProvider>
            <Map:ShapeAttributeValueProvider AttributeName="GDP_MD_EST"/>
        </Map:ChoroplethColorizer.ValueProvider>
        <Map:ChoroplethColorizer.Colors>
            <Color>#FFFF5A19</Color>
            <Color>#FFE5E335</Color>
            <Color>#FF6EC95C</Color>
        </Map:ChoroplethColorizer.Colors>
        <Map:ChoroplethColorizer.Legend>
            <Map:ColorScaleLegend Margin="0" Header="GDP by Countries" Description="In US dollars"
                                  RangeStopsFormat="0,B" MinWidth="400" FontSize="10"/>
        </Map:ChoroplethColorizer.Legend>
    </Map:ChoroplethColorizer>
</Map:MapControl.Colorizer>
```

ShapefileReader Class

Provides functionality to load shape data from an external file in the Shapefiles format.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class ShapefileReader Inherits MapFileReaderBase
```

C#

```
public class ShapefileReader : MapFileReaderBase
```

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279980.

To load vector data from a Shapefile, do the following.

- Create a VectorFileLayer object and add it to the MapControl.Layers collection.
- Create an instance of the ShapefileReader class and assign the instance to the VectorFileLayer.FileReader property.
- Create a MapFileSourceBase class descendant object, configure it and assign it to the MapFileReaderBase.FileSource property of the instance.

Xaml

```
 (MainPage.xaml)
<Map:VectorFileLayer
    ShapeStroke="{ThemeResource AppBarBackgroundThemeBrush}">
    <Map:ShapefileReader>
        <Map:ShapefileReader.FileSource>
            <Map:MapPackageFileSource FileName="Assets\Countries.shp"/>
        </Map:ShapefileReader.FileSource>
    </Map:ShapefileReader>
</Map:VectorFileLayer>
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject
          MapFileReaderBase

ShpFileDataReader Property

Specifies the data reader capable of reading data from the **shp** file.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ShpFileDataReader As DataReader
```

C#

```
public DataReader ShpFileDataReader { get; }
```

Property Value

A DataReader object.

ShapefileReader Methods

Provides functionality to load shape data from an external file in the Shapefiles format.

The following tables list the members exposed by the ShapefileReader type.

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
S	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	ReadAsync	Asynchronously reads a sequence of bytes from the specified file source and advances the position within the stream by the number of bytes read. (Inherited from **MapFileReaderBase**)
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	Release	Releases the resources of the Shapefile reader.
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)

© 2018 Developer Express Inc.

	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Release Method

Releases the resources of the Shapefile reader.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Overrides Public Sub Release()
```
C#
```
public override void Release()
```

SphericalMercatorProjection Class

A class that defines methods specific to the Spherical Mercator Projection.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class SphericalMercatorProjection Inherits ProjectionBase
```

C#

```
public class SphericalMercatorProjection : ProjectionBase
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject

SphericalMercatorProjection Members

A class that defines methods specific to the Spherical Mercator Projection.

The following tables list the members exposed by the SphericalMercatorProjection type.

Public Constructors

	Name	Description
	SphericalMercatorProjection	Initializes a new instance of the SphericalMercatorProjection class with default settings.

Public Properties

	Name	Description
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	OffsetX	Gets or sets the horizontal offset for this projection. (Inherited from **ProjectionBase**)
	OffsetY	Gets or sets the vertical offset for this projection. (Inherited from **ProjectionBase**)
	ScaleX	Gets or sets a value that defines the ratio of map units to degrees of longitude (in radians). (Inherited from **ProjectionBase**)
	ScaleY	Gets or sets a value that defines the ratio of map units to degrees of latitude (in radians). (Inherited from **ProjectionBase**)

Public Methods

	Name	Description
	ClearValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	CreateObjRef	(Inherited from **System.MarshalByRefObject**)
	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GeoPointToMapUnit	Converts the specified geographical point into internal map units.
	GeoToKilometersSize	Converts the specified size in geographical points into the corresponding size in kilometers for

© 2018 Developer Express Inc.

		the specified anchor point. (Inherited from **ProjectionBase**)
	GetAnimationBaseValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	GetHashCode	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	GetLifetimeService	(Inherited from **System.MarshalByRefObject**)
	GetType	(Inherited from **System.Object**)
	GetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	InitializeLifetimeService	(Inherited from **System.MarshalByRefObject**)
	KilometersToGeoSize	Converts the specified size in kilometers into the corresponding size in geographical points for the specified anchor point. (Inherited from **ProjectionBase**)
	MapUnitToGeoPoint	Converts the specified map unit into the corresponding geographical point.
	ReadLocalValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	ReferenceEquals	(Inherited from **System.Object**)
	RegisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	SetValue	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	ToString	(Inherited from **System.Runtime.InteropServices.WindowsRuntime.RuntimeClass**)
	UnregisterPropertyChangedCallback	(Inherited from **Windows.UI.Xaml.DependencyObject**)

Public Fields

	Name	Description
S	LatToKilometersRatio	Defines the ratio of **1** latitude degree to **1** kilometer. (Inherited from **ProjectionBase**)
S	LonToKilometersRatio	Defines the ratio of **1** longitude degree to **1** kilometer. (Inherited from **ProjectionBase**)

© 2018 Developer Express Inc.

S	MaxLatitude	The maximum possible latitude for this projection.
S	MaxLongitude	The maximum possible longitude for this projection.
S	MinLatitude	The minimum possible latitude for this projection.
S	MinLongitude	The minimum possible longitude for this projection.

GeoPointToMapUnit Method

Converts the specified geographical point into internal map units.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function GeoPointToMapUnit(
   ByVal geoPoint As GeoPoint
) As MapUnit
```

C#

```
public override MapUnit GeoPointToMapUnit(
   GeoPoint geoPoint
)
```

Parameters

geoPoint
A GeoPoint object to be converted.

Return Value

A MapUnit object containing internal map coordinates.

MapUnitToGeoPoint Method

Converts the specified map unit into the corresponding geographical point.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Overrides Public Function MapUnitToGeoPoint(
   ByVal mapUnit As MapUnit
) As GeoPoint
```

C#

```
public override GeoPoint MapUnitToGeoPoint(
   MapUnit mapUnit
)
```

Parameters

mapUnit
A MapUnit object to be converted.

Return Value

A GeoPoint object containing geographical coordinates.

StorageFolderType Enumeration

Lists the values used to specify the type of a folder to store map files (e.g., images or other resources).

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public Enum StorageFolderType
```
C#
```
public enum StorageFolderType
```

Members

Name	Description
AppLocal	The root folder in the local app data store, which corresponds to the **ApplicationData.Current.LocalFolder** property.
AppRoaming	The root folder in the roaming app data store, which corresponds to the **ApplicationData.Current.RoamingFolder** property.
AppTemporary	The root folder in the temporary app data store, which corresponds to the **ApplicationData.Current.TemporaryFolder** property.
KnownDocuments	The Documents library, which corresponds to the **Windows.Storage.KnownFolders.DocumentsLibrary** property.
KnownHomeGroup	The HomeGroup folder, which corresponds to the **Windows.Storage.KnownFolders.HomeGroup** property.
KnownMediaServerDevices	The folder of media server (DLNA) devices, which corresponds to the **Windows.Storage.KnownFolders.MediaServerDevices** property.
KnownRemovableDevices	The removable devices folder, which corresponds to the **Windows.Storage.KnownFolders.RemovableDevices** property.
Unknown	The storage folder type is unknown.

Remarks

The values listed by the **StorageFolderType** enumerator are used to set the MapStorageFileSource.StorageFolderType property.

ToolTipInfo Members

Contains settings that define the appearance and behavior of built-in map tooltips.

The following tables list the members exposed by the ToolTipInfo type.

Public Constructors

	Name	Description
	ToolTipInfo	Initializes a new instance of the ToolTipInfo class with default settings.

Public Properties

	Name	Description
	ToolTipPosition	Gets the tooltip position on a map.
	ToolTipText	Gets the hint for the map item located at the specified point on a map.
	Visibility	Gets the current visible state of the map tooltip.

Public Methods

	Name	Description
	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Object**)
	GetHashCode	(Inherited from **System.Object**)
	GetType	(Inherited from **System.Object**)
	ReferenceEquals	(Inherited from **System.Object**)
	ToString	(Inherited from **System.Object**)

Public Events

	Name	Description
	PropertyChanged	Occurs every time any of the ToolTipInfo class properties has changed its value.

ToolTipPosition Property

Gets the tooltip position on a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ToolTipPosition As Point
```

C#

```
public Point ToolTipPosition { get; }
```

Property Value

A **System.Windows.Point** structure representing the tooltip position on a map.

ToolTipText Property

Gets the hint for the map item located at the specified point on a map.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ToolTipText As String
```

C#

```
public string ToolTipText { get; }
```

Property Value

A string value representing the text displayed when the mouse pointer is over a map item.

PropertyChanged Event

Occurs every time any of the ToolTipInfo class properties has changed its value.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
event Public PropertyChanged As PropertyChangedEventHandler
```

C#

```
public event PropertyChangedEventHandler PropertyChanged
```

Event Data

The event handler receives an argument of type System.ComponentModel.PropertyChangedEventArgs containing data related to this event.

The following **PropertyChangedEventArgs** properties provide information specific to this event.

VectorFileLayer Class

A layer that displays vector elements loaded from a file (e.g., Shapefile or KML).

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class VectorFileLayer Inherits VectorLayer
```

C#

```
public class VectorFileLayer : VectorLayer
```

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279980.

To load vector data from a Shapefile, do the following.

- Create a VectorFileLayer object and add it to the MapControl.Layers collection.
- Create an instance of the ShapefileReader class and assign the instance to the FileReader property.
- Create a MapFileSourceBase class descendant object, configure it and assign it to the MapFileReaderBase.FileSource property of the instance.

Xaml

```
 (MainPage.xaml)
<Map:VectorFileLayer
    ShapeStroke="{ThemeResource AppBarBackgroundThemeBrush}">
    <Map:ShapefileReader>
        <Map:ShapefileReader.FileSource>
            <Map:MapPackageFileSource FileName="Assets\Countries.shp"/>
        </Map:ShapefileReader.FileSource>
    </Map:ShapefileReader>
</Map:VectorFileLayer>
```

Inheritance Hierarchy

System.Object
  System.MarshalByRefObject
    System.__ComObject
      System.Runtime.InteropServices.WindowsRuntime.RuntimeClass
        Windows.UI.Xaml.DependencyObject

VectorFileLayer Constructor

Initializes a new instance of the VectorFileLayer class with default settings.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public VectorFileLayer()
```

VectorFileLayer Properties

A layer that displays vector elements loaded from a file (e.g., Shapefile or KML).

The following tables list the members exposed by the VectorFileLayer type.

Public Constructors

	Name	Description
	VectorFileLayer	Initializes a new instance of the VectorFileLayer class with default settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**

FileReader Property

Specifies the file reader for this file layer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property FileReader As MapFileReaderBase
```

C#

```
public MapFileReaderBase FileReader { get; set; }
```

Property Value

A MapFileReaderBase class descendant.

Example

Show Me

A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T279977.

To load vector data from a KML file, do the following.

- Create a VectorFileLayer object and add it to the MapControl.Layers collection.
- Create an instance of the KmlReader class and assign the instance to the FileReader property.
- Create a MapFileSourceBase class descendant object, configure it and assign it to the MapFileReaderBase.FileSource property of the instance.

Xaml

```
 (MainPage.xaml)
<Map:VectorFileLayer
    ShapeStroke="{ThemeResource ApplicationPageBackgroundThemeBrush}">
    <Map:KmlReader>
        <Map:KmlReader.FileSource>
            <Map:MapPackageFileSource
                FileName="Assets\States.kml"/>
        </Map:KmlReader.FileSource>
    </Map:KmlReader>
</Map:VectorFileLayer>
```

IsFileReadCompleted Property

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public ReadOnly Property IsFileReadCompleted As Boolean
```
C#
```
public bool IsFileReadCompleted { get; }
```

Property Value

RenderShapeOnLoad Property

Gets or sets a value indicating whether or not it is necessary to render shapes on map loading.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property RenderShapeOnLoad As Boolean
```

C#

```
public bool RenderShapeOnLoad { get; set; }
```

Property Value

true, to render shapes on map loading; otherwise, **false**.

VectorFileLayer Events

A layer that displays vector elements loaded from a file (e.g., Shapefile or KML).

The following tables list the members exposed by the VectorFileLayer type.

Public Events

	Name	Description
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	Drop	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	FileReadCompleted	Occurs when reading a shape data file has been completed.
	GotFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	Holding	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabledChanged	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	KeyDown	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUp	(Inherited from **Windows.UI.Xaml.UIElement**)
	LayoutUpdated	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loading	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LostFocus	(Inherited from **Windows.UI.Xaml.UIElement**)

FileReadCompleted Event

Occurs when reading a shape data file has been completed.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
event Public FileReadCompleted As EventHandler
```
C#
```
public event EventHandler FileReadCompleted
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

MapItemLoaded Event

Occurs when all map items have been loaded.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
event Public MapItemLoaded As MapItemEventHandler
```

C#

```
public event MapItemEventHandler MapItemLoaded
```

Event Data

The event handler receives an argument of type MapItemEventArgs containing data related to this event.

The following **MapItemEventArgs** properties provide information specific to this event.

Property	Description
Item	Provides access to the map item, for which this event has been raised.

VectorItemsLayer Class

A layer that displays a collection of vector elements.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class VectorItemsLayer Inherits VectorLayer
```

C#

```
public class VectorItemsLayer : VectorLayer
```

Example

Show Me	
A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T196423.	

To add vector items to a map control using Xaml, do the following.

- Add a VectorItemsLayer object to the MapControl.Layers collection.
- Add vector items to the Items collection of the object.

Xaml

VectorItemsLayer Members

A layer that displays a collection of vector elements.

The following tables list the members exposed by the VectorItemsLayer type.

Public Constructors

	Name	Description
	VectorItemsLayer	Initializes a new instance of the VectorItemsLayer class with default settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

VectorItemsLayer Constructor

Initializes a new instance of the VectorItemsLayer class with default settings.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public VectorItemsLayer()
```

VectorItemsLayer Properties

A layer that displays a collection of vector elements.

The following tables list the members exposed by the VectorItemsLayer type.

Public Constructors

	Name	Description
	VectorItemsLayer	Initializes a new instance of the VectorItemsLayer class with default settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)

Items Property

Provides access to the list of vector elements that are painted in this VectorItemsLayer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Items As MapItemCollection
```

C#

```
public MapItemCollection Items { get; }
```

Property Value

A LayerMapItemCollection object containing MapItem class descendants.

Example

Show Me	
A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T196423.	

To add vector items to a map control using Xaml, do the following.

- Add a VectorItemsLayer object to the MapControl.Layers collection.
- Add vector items to the Items collection of the object.

Xaml

ItemsSource Property

Gets or sets the data source of vector items.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemsSource As IEnumerable
```

C#

```
public IEnumerable ItemsSource { get; set; }
```

Property Value

An object that is a data source of map vector items.

Example

Show Me	
A complete sample project is available in the DevExpress Code Examples database at http://www.devexpress.com/example=T191718.	

To bind a vector item source to map control, do the following.

- Create a VectorItemsLayer object and add it to the MapControl.Layers collection.
- Assign the vector item source to the ItemsSource property of the object.

Xaml

VectorLayer Constructor

Initializes a new instance of the VectorLayer class with default settings.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public VectorLayer()
```

VectorLayer Properties

The base class for layers that contain various vector elements (e.g., lines, circles, polygons, or elements loaded from shape data files).

The following tables list the members exposed by the VectorLayer type.

Public Constructors

	Name	Description
	VectorLayer	Initializes a new instance of the VectorLayer class with default settings.

Public Properties

Items Property

Provides access to the list of vector elements that are painted in this VectorLayer.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic

```
Public ReadOnly Property Items As LayerMapItemCollection
```

C#

```
public LayerMapItemCollection Items { get; }
```

Property Value

A LayerMapItemCollection object containing MapItem class descendants.

See Also

ShapeFill Property

Gets or sets the brush that specifies how the shape's interior is painted.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ShapeFill As SolidColorBrush
```

C#

```
public SolidColorBrush ShapeFill { get; set; }
```

Property Value

A SolidColorBrush object that describes how the shape's interior is painted.

ShapeStroke Property

Gets or sets the brush that specifies how the shape outline is painted.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ShapeStroke As SolidColorBrush
```

C#

```
public SolidColorBrush ShapeStroke { get; set; }
```

Property Value

A SolidColorBrush object that specifies how the shape outline is painted.

ShapeStrokeStyle Property

Gets or sets the settings of the shape outline.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Property ShapeStrokeStyle As StrokeStyle
```

C#

```
public StrokeStyle ShapeStrokeStyle { get; set; }
```

Property Value

A StrokeStyle object that stores settings of the shape outline.

ViewportChangedEventArgs Class

Provides data for the LayerBase.ViewportChanged event.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Class ViewportChangedEventArgs Inherits EventArgs
```

C#

```
public class ViewportChangedEventArgs : EventArgs
```

Remarks

An instance of the **ViewportChangedEventArgs** class with appropriate settings is automatically created and passed to the corresponding event's handler.

ViewportChangedEventArgs Members

Provides data for the LayerBase.ViewportChanged event.

The following tables list the members exposed by the ViewportChangedEventArgs type.

Public Properties

	Name	Description
	BottomRight	Returns the bottom-right coordinate of the current viewport.
	TopLeft	Returns the top-left coordinate of the current viewport.
	ZoomLevel	Returns the zoom level of the current viewport.

Public Methods

	Name	Description
	Equals	(Inherited from **System.Object**)
	Equals	(Inherited from **System.Object**)
	GetHashCode	(Inherited from **System.Object**)
	GetType	(Inherited from **System.Object**)
	ReferenceEquals	(Inherited from **System.Object**)
	ToString	(Inherited from **System.Object**)

Public Fields

	Name	Description
	Empty	(Inherited from **System.EventArgs**)

BottomRight Property

Returns the bottom-right coordinate of the current viewport.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property BottomRight As GeoPoint
```

C#

```
public GeoPoint BottomRight { get; }
```

Property Value

A GeoPoint containing information about the bottom-right coordinate.

TopLeft Property

Returns the top-left coordinate of the current viewport.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property TopLeft As GeoPoint
```

C#

```
public GeoPoint TopLeft { get; }
```

Property Value

A GeoPoint containing information about the top-left coordinate.

ZoomLevel Property

Returns the zoom level of the current viewport.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax
Visual Basic
```
Public ReadOnly Property ZoomLevel As Double
```
C#
```
public Double ZoomLevel { get; }
```

Property Value

A double value that is the zoom level of the current viewport.

ViewportChangedEventHandler Delegate

A method that will handle the LayerBase.ViewportChanged event.

Namespace: DevExpress.UI.Xaml.Map
Assembly: DevExpress.UI.Xaml.Map.v18.1.dll

Syntax

Visual Basic

```
Public Delegate Sub ViewportChangedEventHandler(
   ByVal sender As Object,
   ByVal e As ViewportChangedEventArgs
)
```

C#

```
public delegate void ViewportChangedEventHandler(
   object sender,
   ViewportChangedEventArgs e
)
```

Parameters

The declaration of your event handler must have the same parameters as the **ViewportChangedEventHandler** delegate declaration.
sender
The event source.
e
A ViewportChangedEventArgs object that contains event data.

Remarks

When creating a ViewportChangedEventHandler delegate, you identify the method that will handle the corresponding event. To associate an event with your event handler, add a delegate instance to this event. The event handler is called whenever the event occurs, unless you remove the delegate. For more information about event handler delegates, see **Events and Delegates** in **MSDN**.

DevExpress.UI.Xaml.Ribbon

Contains classes that allow you to build the Ribbon UI.

Classes

	Class	Description
	BackstageButtonItem	A button item within a BackstageView.
	BackstageSeparatorItem	Visually separates backstage items.
	BackstageTabItem	A tab item within a BackstageView.
	BackstageView	A popup menu emulating the menu in MS Office Ribbon UI.
	HelpPane	Represents a help pane.
	HelpPaneBase	Serves as the base class for the HelpPane.
	HelpPaneButton	Represents a help pane button.
	RibbonControl	The ribbon control.
	RibbonControlBase	Serves as the base class for the RibbonControl.
	RibbonGroup	Represents a ribbon group.
	RibbonTab	Represents a ribbon tab.
	RibbonTabBase	Serves as the base for classes that represent ribbon tabs.
	RibbonToolbarControl	The Ribbon Toolbar control.
	ToolbarControl	A lightweight one-tab toolbar control.
	ToolbarGroup	Represents a toolbar group.

Enumerations

	Enumeration	Description
	ControlPaneShowMode	Lists values that specify whether the control pane content is displayed inline or in a flyout.
	RibbonState	Lists values that specify the current ribbon state.
	RibbonViewMode	Lists values that specify the RibbonControl's view mode.

© 2018 Developer Express Inc.

BackstageButtonItem Class

A button item within a BackstageView.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Class BackstageButtonItem Inherits RibbonButtonItemBase, IBackstageItem,
  ISelectable,
  ISupportOwner(of BackstageView)
```

C#

```
public class BackstageButtonItem : RibbonButtonItemBase, IBackstageItem,
  ISelectable,
  ISupportOwner<BackstageView>
```

Remarks

The **BackstageButtonItem** represents a regular button. Use the **Content** property to place text or any object that will be displayed inside a button. The **Icon** property allows you to set an icon to be shown within the button.

Use the **Command** property to bind an action to your button. Alternatively, handle the **Click** or **Tapped** event.

If you want to place a button within a BackstageView, add a **BackstageButtonItem** class instance to the view's **Items** collection. To add a button in XAML, define a **BackstageButtonItem** object between the BackstageView opening and closing tags. See the example below.

Xaml

```
<Ribbon:RibbonControl.BackstageView>
    <Ribbon:BackstageView>
        <Ribbon:BackstageButtonItem Content="Save" Command="{x:Bind ViewModel.SaveFileCommand}" />
    </Ribbon:BackstageView>
</Ribbon:RibbonControl.BackstageView>
```

BackstageSeparatorItem Class

Visually separates backstage items.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Class BackstageSeparatorItem Inherits Control, IBackstageItem,
  IVisualItem,
  ISelectable
```

C#

```
public class BackstageSeparatorItem : Control, IBackstageItem,
  IVisualItem,
  ISelectable
```

Remarks

The **BackstageSeparatorItem** displays a line that visually separates neighboring backstage items. To place a **BackstageSeparatorItem** inside a BackstageView, add a new instance of the **BackstageSeparatorItem** to the BackstageView's **Items** collection. To do this via XAML, place a **BackstageSeparatorItem** class object between the opening and the closing tags of the BackstageView. See the example below to learn more.

Xaml

```
<Ribbon:RibbonControl.BackstageView>
    <Ribbon:BackstageView>
        <Ribbon:BackstageButtonItem Content="Open" Command="{x:Bind ViewModel.OpenCommand}" />
        <Ribbon:BackstageSeparatorItem />
        <Ribbon:BackstageButtonItem Content="Save" Command="{x:Bind ViewModel.SaveFileCommand}" />
        <Ribbon:BackstageButtonItem Content="Save as..." Command="{x:Bind ViewModel.SaveFileAsCommand}" />
    </Ribbon:BackstageView>
</Ribbon:RibbonControl.BackstageView>
```

BackstageTabItem Class

A tab item within a BackstageView.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

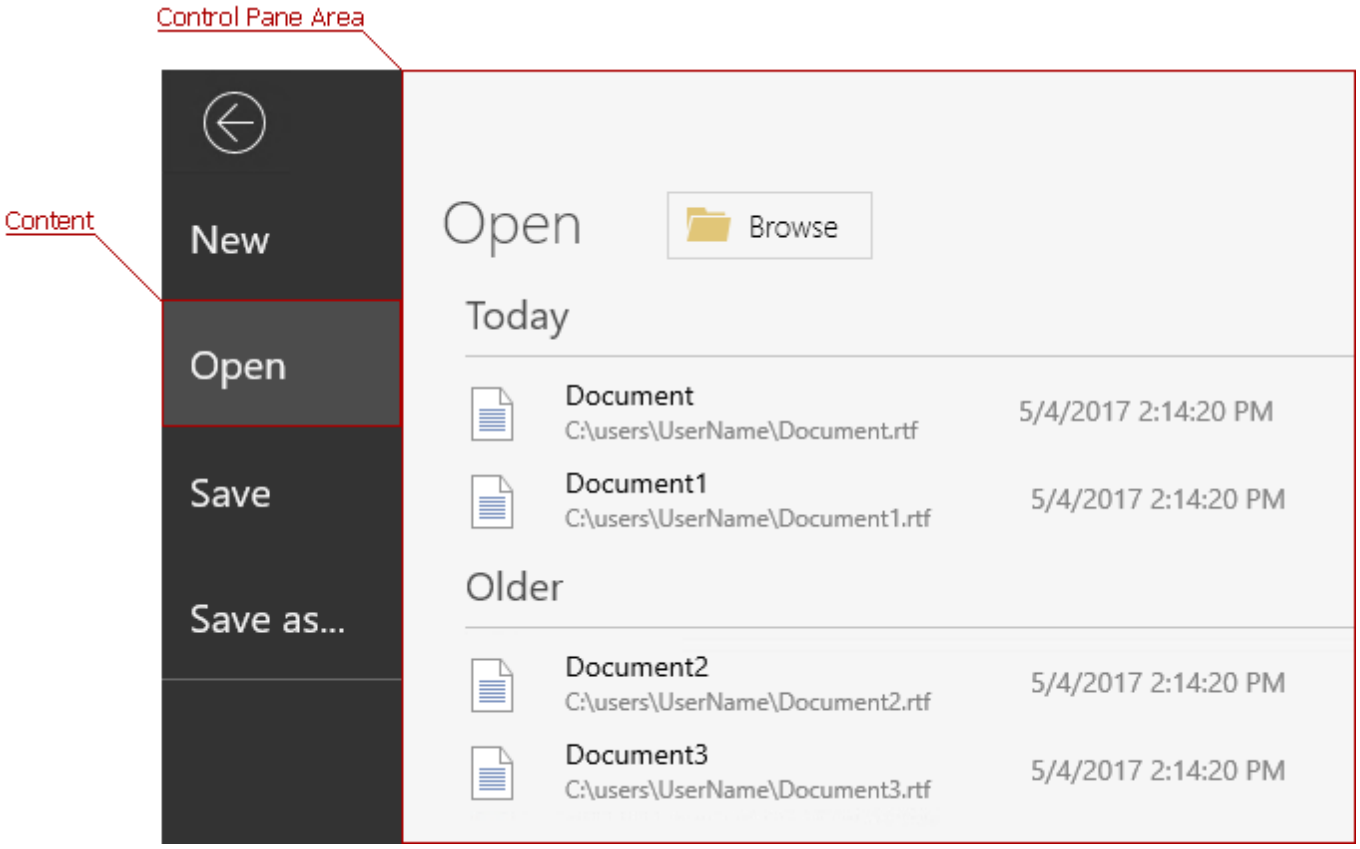
```
Public Class BackstageTabItem Inherits RibbonSelectorItemBase, IBackstageTabItem,
  IBackstageItem,
  ISelectable,
  ISupportOwner(of BackstageView),
  IFlyoutPlaceholder
```

C#

```
public class BackstageTabItem : RibbonSelectorItemBase, IBackstageTabItem,
  IBackstageItem,
  ISelectable,
  ISupportOwner<BackstageView>,
  IFlyoutPlaceholder
```

Remarks

A tab item is a clickable element within a BackstageView, structurally consisting of the content and control pane areas. The image below illustrates a visual tab item's areas allocation:



The backstage item content is specified by its **Content** property.

The control pane is displayed when the tab item is selected. Its content is specified by the ControlPane property that can be initialized with a single object only. To display multiple controls within the control pane, add the desired controls to a container (such as Grid or StackPanel) and initialize the ControlPane property with this container.

To add a tab item, insert a new **BackstageTabItem** instance in the BackstageView's **Items** collection. In XAML, define a **BackstageTabItem** object between the BackstageView opening and closing tags. See the example below.

Xaml	

© 2018 Developer Express Inc.

```
<Ribbon:RibbonControl.BackstageView>
    <Ribbon:BackstageView Caption="Menu">
        <Ribbon:BackstageTabItem Content="Close" >
            <StackPanel>
                <TextBlock Text="Select whether to save or discard changes before closing the application
                <Button Content="Save and close" Command="{x:Bind ViewModel.SaveAndCloseCommand}" />
                <Button Content="Close without saving" Command="{x:Bind ViewModel.DiscardAndCloseCommand}"
            </StackPanel>
        </Ribbon:BackstageTabItem>
    </Ribbon:BackstageView>
```

One of the tab items in a BackstageView is selected by default. This ensures that the control pane area always displays some content. By default, the first tab item defined in code or XAML is selected. You can set a custom default tab item using the BackstageView.SelectedTabOnShow or BackstageView.SelectedTabIndexOnShow property. The currently selected tab can also be accessed through the RibbonControlBase.SelectedTabCaption or BackstageView.SelectedTab property.

BackstageTabItem Members

A tab item within a BackstageView.

The following tables list the members exposed by the BackstageTabItem type.

Public Constructors

	Name	Description
	BackstageTabItem	Initializes a new instance of the BackstageTabItem class.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualSize	(Inherited from **DevExpress.UI.Xaml.Internal.ContentControlEx**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)

BackstageTabItem Constructor

Initializes a new instance of the BackstageTabItem class.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public BackstageTabItem()
```

ControlPane Property

Gets or sets a control displayed in the BackstageView's right area when the tab item is selected. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property ControlPane As Object
```

C#

```
public object ControlPane { get; set; }
```

Property Value

A control displayed in the BackstageView's right area when the tab item is selected.

Remarks

The BackstageView's general structure consists of two areas. The left one - the Content Area - holds all backstage menu items. The right area - the Control Pane - displays the content of the currently selected tab item. This content is specified by the item's **ControlPane** property.

ControlPaneShowMode Property

Gets or sets whether the control pane content is displayed inline or in a flyout. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property ControlPaneShowMode As ControlPaneShowMode
```

C#

```
public ControlPaneShowMode ControlPaneShowMode { get; set; }
```

Property Value

A ControlPaneShowMode enumeration value. By default, **Inline**.

Remarks

Use the ControlPane property to specify the content displayed by the control pane.

FlyoutCaption Property

Gets or sets the control pane flyout's caption. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property FlyoutCaption As String
```

C#

```
public string FlyoutCaption { get; set; }
```

Property Value

A string value that represents the control pane flyout's caption.

Remarks

The **FlyoutCaption** property is in effect when the item's ControlPaneShowMode property is set to ControlPaneShowMode.Flyout.

IsSelectable Property

Gets if the current BackstageTabItem is selectable at the moment.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property IsSelectable As Boolean
```

C#

```
public bool IsSelectable { get; }
```

Property Value

true if the current BackstageTabItem is selectable at the moment; otherwise, **false**.

BackstageView Class

A popup menu emulating the menu in MS Office Ribbon UI.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Class BackstageView Inherits RibbonHeaderedContainerBase, ISupportSelection
```

C#

```
public class BackstageView : RibbonHeaderedContainerBase, ISupportSelection
```

Remarks

To learn more, see Backstage View.

BackstageView Members

A popup menu emulating the menu in MS Office Ribbon UI.

The following tables list the members exposed by the BackstageView type.

Public Constructors

	Name	Description
	BackstageView	Initializes a new instance of the BackstageView class.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualPlacementTarget	Gets the UIElement relative to which the backstage view is currently positioned. This is a dependency property.
	ActualSize	(Inherited from **DevExpress.UI.Xaml.Internal.ControlEx**)

BackstageView Constructor

Initializes a new instance of the BackstageView class.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public BackstageView()
```

ActualPlacementTarget Property

Gets the UIElement relative to which the backstage view is currently positioned. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ActualPlacementTarget As UIElement
```

C#

```
public UIElement ActualPlacementTarget { get; }
```

Property Value

A UIElement descendant.

CloseCommand Property

Gets the command that closes the view.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property CloseCommand As ICommand
```

C#

```
public ICommand CloseCommand { get; }
```

Property Value

An object implementing the Windows.UI.Xaml.Input.ICommand interface.

IsOpen Property

Gets or sets whether the backstage view is currently opened. This is dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property IsOpen As Boolean
```

C#

```
public bool IsOpen { get; set; }
```

Property Value

true if the backstage view is currently opened; otherwise, **false**.

Items Property

Provides access to BackstageButtonItem, BackstageTabItem and BackstageSeparatorItem objects owned by this BackstageView.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Items As BackstageItemCollection
```

C#

```
public BackstageItemCollection Items { get; }
```

Property Value

A collection of backstage items.

See Also

BackstageView Class
BackstageView Members

ItemsSource Property

Gets or sets the source of backstage items with which this BackstageView should be populated. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemsSource As Object
```

C#

```
public object ItemsSource { get; set; }
```

Property Value

An object that stores backstage items.

See Also

BackstageView Class

ItemTemplate Property

Gets or sets the template that will be applied to all backstage items owned by this BackstageView. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemTemplate As DataTemplate
```

C#

```
public DataTemplate ItemTemplate { get; set; }
```

Property Value

A DataTemplate object that is the template that will be applied to all backstage items owned by this BackstageView.

ItemTemplateSelector Property

Gets or sets an object that uses custom logic to select a required template that should be applied to items of the current BackstageView. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ItemTemplateSelector { get; set; }
```

Property Value

A DataTemplateSelector object that implements custom logic to select a required template that should be applied to items of the current BackstageView.

PlacementTarget Property

Gets or sets the UIElement relative to which the backstage view is positioned when it opens. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property PlacementTarget As UIElement
```

C#

```
public UIElement PlacementTarget { get; set; }
```

Property Value

A UIElement object.

See Also

BackstageView Class

SelectedTab Property

Gets or sets the currently selected tab. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedTab As IBackstageTabItem
```

C#

```
public IBackstageTabItem SelectedTab { get; set; }
```

Property Value

The currently selected IBackstageTabItem.

Remarks

The **SelectedTab** allows you to define which tab is currently selected. One of the tabs within the BackstageView is always selected. This item's contents (BackstageTabItem.ControlPane) are displayed in the BackstageView's right area. Selecting a tab item fires the RibbonControlBase.SelectedTabChanged event and sets the item's RibbonTabBase.IsSelected property to *true*.

To specify a tab that is selected by default when the BackstageView is opened by the end-user, use the SelectedTabOnShow or SelectedTabIndexOnShow property.

SelectedTabCaptionOnShow Property

Gets or sets the caption of the tab that is selected by default when the backstage view is opened. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedTabCaptionOnShow As String
```

C#

```
public string SelectedTabCaptionOnShow { get; set; }
```

Property Value

An string value that is the caption of the tab to be selected by default.

SelectedTabIndexOnShow Property

Gets or sets the index of the tab that is selected by default when the backstage view is opened. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedTabIndexOnShow As Integer
```

C#

```
public int SelectedTabIndexOnShow { get; set; }
```

Property Value

An integer value that is the index of the tab to be selected by default.

SelectedTabOnShow Property

Gets or sets the tab that is selected by default when the BackstageView is opened by the end-user. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedTabOnShow As IBackstageTabItem
```

C#

```
public IBackstageTabItem SelectedTabOnShow { get; set; }
```

Property Value

The IBackstageTabItem that is selected by default.

StaysOpen Property

Gets or sets whether to close the backstage view when it loses focus. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property StaysOpen As Boolean
```

C#

```
public bool StaysOpen { get; set; }
```

Property Value

true to keep the backstage view opened on losing focus; otherwise, **false**.

ControlPaneShowMode Enumeration

Lists values that specify whether the control pane content is displayed inline or in a flyout.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Enum ControlPaneShowMode
```

C#

```
public enum ControlPaneShowMode
```

Members

Name	Description
Flyout	The control pane content is displayed in a flyout.
Inline	The control pane content is displayed inline.

Remarks

The values listed by this enumeration are used to set the BackstageTabItem.ControlPaneShowMode property's value.

Gets or sets the template that will be applied to all items owned by this HelpPaneBase. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemTemplate As DataTemplate
```

C#

```
public DataTemplate ItemTemplate { get; set; }
```

Property Value

A DataTemplate object that is the template that will be applied to all items owned by this HelpPaneBase.

ItemTemplateSelector Property

Gets or sets an object that uses custom logic to select a required template that should be applied to items of the current HelpPaneBase. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property ItemTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector ItemTemplateSelector { get; set; }
```

Property Value

A DataTemplateSelector object that implements custom logic to select a required template that should be applied to items of the current HelpPaneBase.

HelpPaneButton Class

Represents a help pane button.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Class HelpPaneButton Inherits RibbonButtonItemBase, IRibbonHelpPaneItem,
  IHelpPaneItem
```

C#

```
public class HelpPaneButton : RibbonButtonItemBase, IRibbonHelpPaneItem,
  IHelpPaneItem
```

Placement Property

Gets or sets whether to display the item in the header or footer. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property Placement As HelpPaneItemPlacement
```

C#

```
public HelpPaneItemPlacement Placement { get; set; }
```

Property Value

A DevExpress.UI.Xaml.Ribbon.HelpPaneItemPlacement enumeration value.

Remarks

The **Placement** property is only in effect when the application is running on a mobile device.

PlatformVisibility Property

Gets or sets the device family for which the button is shown. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property PlatformVisibility As DeviceFamily
```

C#

```
public DeviceFamily PlatformVisibility { get; set; }
```

Property Value

A DevExpress.Mvvm.Native.DeviceFamily enumeration value.

PlacementChanged Event

This property supports the internal infrastructure and is not intended to be used directly from your code.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
event Public PlacementChanged As EventHandler
```

C#

```
public event EventHandler PlacementChanged
```

Event Data

The event handler receives an argument of type System.EventArgs containing data related to this event.

RibbonControl Class

The ribbon control.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

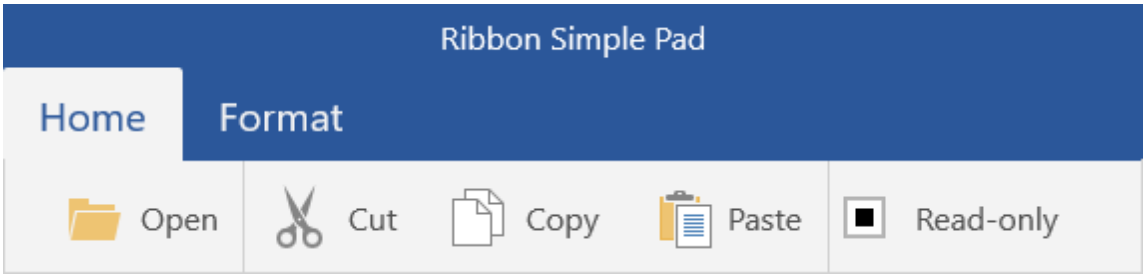
```
Public Class RibbonControl Inherits RibbonControlBase, IWindowTitleCustomizer
```

C#

```
public class RibbonControl : RibbonControlBase, IWindowTitleCustomizer
```

Remarks

The following code creates a simple Ribbon UI consisting of two tabs.



Buttons in the example do not implement any action. Please refer to the Feature Demo shipped with the installation for a thorough example.

RibbonControl Members

The ribbon control.

The following tables list the members exposed by the RibbonControl type.

Public Constructors

	Name	Description
	RibbonControl	Initializes a new instance of the RibbonControl class.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualSize	(Inherited from **DevExpress.UI.Xaml.Internal.ContentControlEx**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackstageView	Gets or sets the BackstageView control encapsulating the Main Menu for the Ribbon control.
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanMinimize	Gets or sets whether the contents of ribbon tabs are collapsed/expanded on clicking the active tab. This is a dependency property.
	ChangeRibbonStateCommand	Gets the command that changes the current state of the ribbon. (Inherited from **RibbonControlBase**)
	ChangeRibbonViewModeCommand	Gets the command that changes the ribbon's view mode. (Inherited from **RibbonControlBase**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Content	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplate	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)

© 2018 Developer Express Inc.

	ContentTemplateRoot	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateSelector	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateSelectorProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTransitions	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTransitionsProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContextualHeaderItemContainerStyle	(Inherited from **RibbonControlBase**)
	ContextualHeaderItemTemplate	Gets or sets a template that specifies the appearance of contextual tab item headers. This is a dependency property. (Inherited from **RibbonControlBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	EmbedRibbonInWindowTitle	Gets or sets whether the RibbonControl replaces the window's title bar. This is a dependency property.

© 2018 Developer Express Inc.

	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HeaderItemContainerStyle	(Inherited from **RibbonControlBase**)
	HeaderItemTemplate	Gets or sets a template that defines the presentation of ribbon tab headers.

© 2018 Developer Express Inc.

		This is a dependency property. (Inherited from **RibbonControlBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HelpPane	Gets or sets an object that represents a ribbon help pane. This is a dependency property.
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLoaded	(Inherited from **DevExpress.UI.Xaml.Internal.ContentControlEx**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTitleEditable	Gets or sets whether an end-user can edit the Title property value at runtime. This is a dependency property.
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
S	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Padding	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	PaddingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	SelectedTab	Gets or sets which of the RibbonControl tabs is currently selected. This is a dependency property.

© 2018 Developer Express Inc.

	SelectedTabCaption	Gets or sets the caption of the tab that is currently selected. This is a dependency property. (Inherited from **RibbonControlBase**)
	ShowTitleBar	Gets or sets whether the RibbonControl displays the title bar. This is a dependency property.
	State	Gets or sets whether a ribbon is collapsed. This is a dependency property. (Inherited from **RibbonControlBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabIndex	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabIndexProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigation	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabNavigationProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Tabs	Gets the collection of RibbonControl tabs.
	TabsSource	Gets or sets the source of tabs with which this RibbonControl should be populated. This is a dependency property. (Inherited from **RibbonControlBase**)
	TabTemplate	Gets or sets a template that defines the presentation of ribbon tabs. This is a dependency property. (Inherited from **RibbonControlBase**)
	TabTemplateSelector	Gets or sets an object that chooses a ribbon tab template based on custom logic. This is a dependency property. (Inherited from **RibbonControlBase**)
	Tag	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Template	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Title	Gets or sets the title displayed at the top of the Ribbon control.
	TitleSettings	
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseSystemFocusVisuals	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	UseSystemFocusVisualsProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	VerticalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ViewMode	Gets or sets whether or not the auto-hide functionality is enabled. This is a dependency property. (Inherited from **RibbonControlBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Width	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description
	AddHandler	(Inherited from **Windows.UI.Xaml.UIElement**)
	ApplyTemplate	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Arrange	(Inherited from **Windows.UI.Xaml.UIElement**)
	CancelDirectManipulations	(Inherited from **Windows.UI.Xaml.UIElement**)
	CapturePointer	(Inherited from **Windows.UI.Xaml.UIElement**)

Public Fields

	Name	Description
S	ActualSizeProperty	(Inherited from **DevExpress.UI.Xaml.Internal.ContentControlEx**)
S	BackstageViewProperty	Identifies the BackstageView dependency property.
S	CanMinimizeProperty	Identifies the CanMinimize dependency property.
S	ContextualHeaderItemContainerStyleProperty	Identifies the ContextualHeaderItemContainerStyle dependency property. (Inherited from **RibbonControlBase**)
S	ContextualHeaderItemTemplateProperty	Identifies the ContextualHeaderItemTemplate dependency property. (Inherited from **RibbonControlBase**)
S	EmbedRibbonInWindowTitleProperty	Identifies the EmbedRibbonInWindowTitle dependency property.
S	HeaderItemContainerStyleProperty	Identifies the HeaderItemContainerStyle dependency property. (Inherited from **RibbonControlBase**)
S	HeaderItemTemplateProperty	Identifies the HeaderItemTemplate dependency property. (Inherited from **RibbonControlBase**)
S	HelpPaneProperty	Identifies the HelpPane dependency property.
S	IsTitleEditableProperty	Identifies the IsTitleEditable dependency property.
S	SelectedTabCaptionProperty	Identifies the SelectedTabCaption dependency property. (Inherited from **RibbonControlBase**)
S	SelectedTabProperty	Identifies the SelectedTab dependency property.
S	ShowTitleBarProperty	Identifies the ShowTitleBar dependency property.
S	StateProperty	Identifies the State dependency property. (Inherited from **RibbonControlBase**)
S	TabsSourceProperty	Identifies the TabsSource dependency property. (Inherited from **RibbonControlBase**)

© 2018 Developer Express Inc.

	TabTemplateProperty	Identifies the TabTemplate dependency property. (Inherited from **RibbonControlBase**)
	TabTemplateSelectorProperty	Identifies the TabTemplateSelector dependency property. (Inherited from **RibbonControlBase**)
	TitleProperty	Identifies the Title dependency property.
	TitleSettingsProperty	Identifies the TitleSettings dependency property.
	ViewModeProperty	Identifies the ViewMode dependency property. (Inherited from **RibbonControlBase**)

Public Events

	Name	Description

RibbonControl Constructor

Initializes a new instance of the RibbonControl class.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public RibbonControl()
```

RibbonControl Properties

The ribbon control.

The following tables list the members exposed by the RibbonControl type.

Public Constructors

	Name	Description
	RibbonControl	Initializes a new instance of the RibbonControl class.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualSize	(Inherited from **DevExpress.UI.Xaml.Internal.ContentControlEx**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackstageView	Gets or sets the BackstageView control encapsulating the Main Menu for the Ribbon control.
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanMinimize	Gets or sets whether the contents of ribbon tabs are collapsed/expanded on clicking the active tab. This is a dependency property.
	ChangeRibbonStateCommand	Gets the command that changes the current state of the ribbon. (Inherited from **RibbonControlBase**)
	ChangeRibbonViewModeCommand	Gets the command that changes the ribbon's view mode. (Inherited from **RibbonControlBase**)
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
S	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
S	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Content	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplate	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)

© 2018 Developer Express Inc.

	ContentTemplateRoot	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateSelector	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTemplateSelectorProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTransitions	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
S	ContentTransitionsProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContextualHeaderItemContainerStyle	(Inherited from **RibbonControlBase**)
	ContextualHeaderItemTemplate	Gets or sets a template that specifies the appearance of contextual tab item headers. This is a dependency property. (Inherited from **RibbonControlBase**)
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
S	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
S	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	EmbedRibbonInWindowTitle	Gets or sets whether the RibbonControl replaces the window's title bar. This is a dependency property.

© 2018 Developer Express Inc.

	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontFamily	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontFamilyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontSize	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontSizeProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStretch	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontStretchProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontStyle	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontStyleProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FontWeight	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	FontWeightProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Foreground	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	ForegroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	HeaderItemContainerStyle	(Inherited from **RibbonControlBase**)
	HeaderItemTemplate	Gets or sets a template that defines the presentation of ribbon tab headers.

© 2018 Developer Express Inc.

		This is a dependency property. (Inherited from **RibbonControlBase**)
	Height	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HelpPane	Gets or sets an object that represents a ribbon help pane. This is a dependency property.
S	HoldingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	HorizontalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	HorizontalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	HorizontalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	HorizontalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsDoubleTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsDoubleTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	IsEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsHitTestVisible	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHitTestVisibleProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsHoldingEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
S	IsHoldingEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsLoaded	(Inherited from **DevExpress.UI.Xaml.Internal.ContentControlEx**)
	IsRightTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	IsRightTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTabStop	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTabStopProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTapEnabled	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTapEnabledProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsTemplateFocusTargetProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabled	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTextScaleFactorEnabledProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	IsTitleEditable	Gets or sets whether an end-user can edit the Title property value at runtime. This is a dependency property.
	KeyDownEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUpEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Language	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LanguageProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ManipulationCompletedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationDeltaEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStartingEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Margin	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MarginProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MaxWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MaxWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	MinWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	MinWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Name	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	NameProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Opacity	(Inherited from **Windows.UI.Xaml.UIElement**)
S	OpacityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Padding	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	PaddingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Parent	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	PointerCanceledEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	PointerCaptureLostEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptures	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCapturesProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEnteredEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExitedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMovedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleasedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChangedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	Projection	(Inherited from **Windows.UI.Xaml.UIElement**)
	ProjectionProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransform	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOrigin	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformOriginProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RenderTransformProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	RequestedTheme	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RequestedThemeProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Resources	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	RightTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	SelectedTab	Gets or sets which of the RibbonControl tabs is currently selected. This is a dependency property.

© 2018 Developer Express Inc.

	SelectedTabCaption	Gets or sets the caption of the tab that is currently selected. This is a dependency property. (Inherited from **RibbonControlBase**)
	ShowTitleBar	Gets or sets whether the RibbonControl displays the title bar. This is a dependency property.
	State	Gets or sets whether a ribbon is collapsed. This is a dependency property. (Inherited from **RibbonControlBase**)
	Style	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	StyleProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	TabIndex	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabIndexProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	TabNavigation	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TabNavigationProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Tabs	Gets the collection of RibbonControl tabs.
	TabsSource	Gets or sets the source of tabs with which this RibbonControl should be populated. This is a dependency property. (Inherited from **RibbonControlBase**)
	TabTemplate	Gets or sets a template that defines the presentation of ribbon tabs. This is a dependency property. (Inherited from **RibbonControlBase**)
	TabTemplateSelector	Gets or sets an object that chooses a ribbon tab template based on custom logic. This is a dependency property. (Inherited from **RibbonControlBase**)
	Tag	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TagProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	TappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	Template	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	TemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Title	Gets or sets the title displayed at the top of the Ribbon control.
	TitleSettings	
	Transform3D	(Inherited from **Windows.UI.Xaml.UIElement**)
S	Transform3DProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Transitions	(Inherited from **Windows.UI.Xaml.UIElement**)
S	TransitionsProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Triggers	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	UseLayoutRounding	(Inherited from **Windows.UI.Xaml.UIElement**)
S	UseLayoutRoundingProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	UseSystemFocusVisuals	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	UseSystemFocusVisualsProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	VerticalAlignment	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
S	VerticalAlignmentProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	VerticalContentAlignment	(Inherited from **Windows.UI.Xaml.Controls.Control**)
S	VerticalContentAlignmentProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	ViewMode	Gets or sets whether or not the auto-hide functionality is enabled. This is a dependency property. (Inherited from **RibbonControlBase**)
	Visibility	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	VisibilityProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Width	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	WidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

Public Methods

	Name	Description

Public Fields

	Name	Description
S	ActualSizeProperty	(Inherited from **DevExpress.UI.Xaml.Internal.ContentControlEx**)
S	BackstageViewProperty	Identifies the BackstageView dependency property.
S	CanMinimizeProperty	Identifies the CanMinimize dependency property.
S	ContextualHeaderItemContainerStyleProperty	Identifies the ContextualHeaderItemContainerStyle dependency property. (Inherited from **RibbonControlBase**)
S	ContextualHeaderItemTemplateProperty	Identifies the ContextualHeaderItemTemplate dependency property. (Inherited from **RibbonControlBase**)
S	EmbedRibbonInWindowTitleProperty	Identifies the EmbedRibbonInWindowTitle dependency property.
S	HeaderItemContainerStyleProperty	Identifies the HeaderItemContainerStyle dependency property. (Inherited from **RibbonControlBase**)
S	HeaderItemTemplateProperty	Identifies the HeaderItemTemplate dependency property. (Inherited from **RibbonControlBase**)
S	HelpPaneProperty	Identifies the HelpPane dependency property.
S	IsTitleEditableProperty	Identifies the IsTitleEditable dependency property.
S	SelectedTabCaptionProperty	Identifies the SelectedTabCaption dependency property. (Inherited from **RibbonControlBase**)
S	SelectedTabProperty	Identifies the SelectedTab dependency property.
S	ShowTitleBarProperty	Identifies the ShowTitleBar dependency property.
S	StateProperty	Identifies the State dependency property. (Inherited from **RibbonControlBase**)
S	TabsSourceProperty	Identifies the TabsSource dependency property. (Inherited from **RibbonControlBase**)

© 2018 Developer Express Inc.

	TabTemplateProperty	Identifies the TabTemplate dependency property. (Inherited from **RibbonControlBase**)
	TabTemplateSelectorProperty	Identifies the TabTemplateSelector dependency property. (Inherited from **RibbonControlBase**)
	TitleProperty	Identifies the Title dependency property.
	TitleSettingsProperty	Identifies the TitleSettings dependency property.
	ViewModeProperty	Identifies the ViewMode dependency property. (Inherited from **RibbonControlBase**)

BackstageView Property

Gets or sets the BackstageView control encapsulating the Main Menu for the Ribbon control.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property BackstageView As BackstageView
```

C#

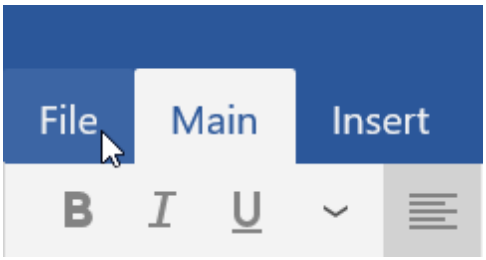
```
public BackstageView BackstageView { get; set; }
```

Property Value

The object that specifies the Main Menu for the Ribbon control.

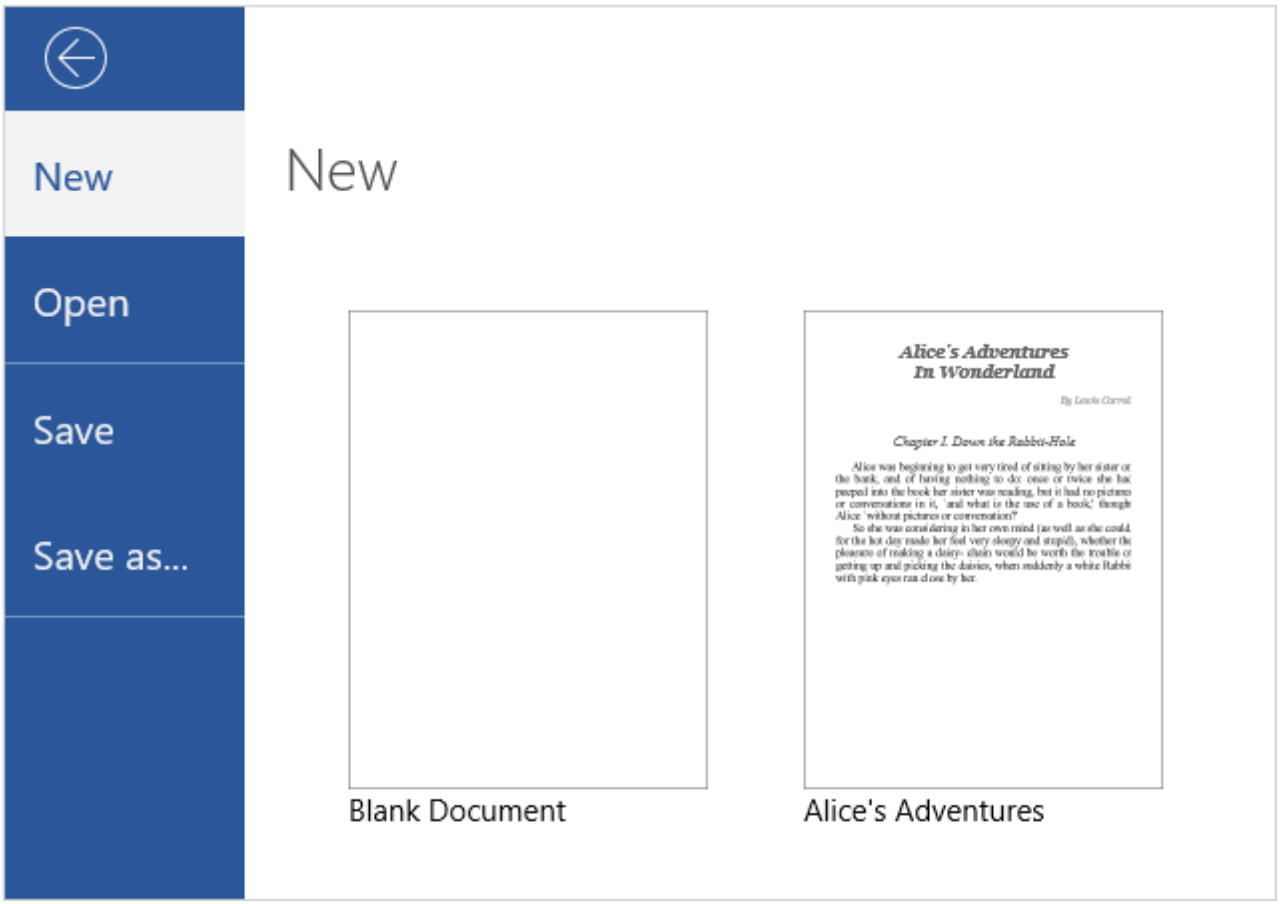
Remarks

To add a Main Menu to the Ribbon control, assign a BackstageView object to the **RibbonControl.BackstageView** property. When this is done, the Ribbon control displays an additional tab at the beginning, which can be clicked to invoke the Main Menu. The following image shows the Ribbon control with the associated Main Menu, named "File".



A click on the "File" tab invokes the associated BackstageView containing four items. The "New" tab item is currently selected:

© 2018 Developer Express Inc.



To learn more, see Backstage View.

CanMinimize Property

Gets or sets whether the contents of ribbon tabs are collapsed/expanded on clicking the active tab. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property CanMinimize As Boolean
```

C#

```
public bool CanMinimize { get; set; }
```

Property Value

true, if ribbon tab contents can be collapsed/expanded on a mouse click; otherwise, **false**.

Remarks

The following animation demonstrates the tab contents collapse feature:

EmbedRibbonInWindowTitle Property

Gets or sets whether the RibbonControl replaces the window's title bar. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property EmbedRibbonInWindowTitle As Boolean
```

C#

```
public bool EmbedRibbonInWindowTitle { get; set; }
```

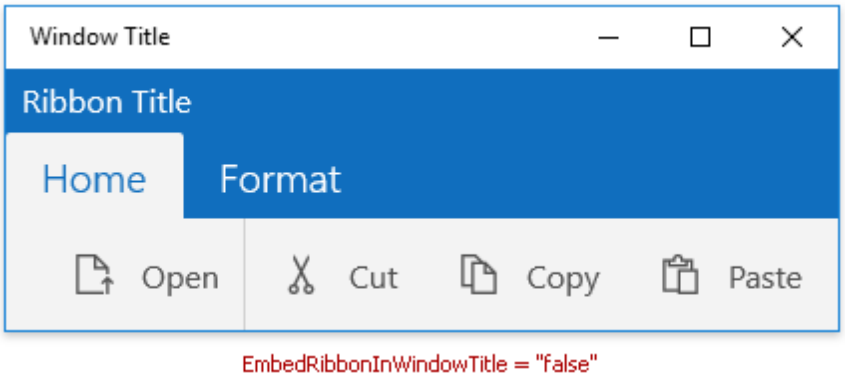
Property Value

true to display the RibbonControl instead of the window's title bar; otherwise, **false**. The default is **false**.

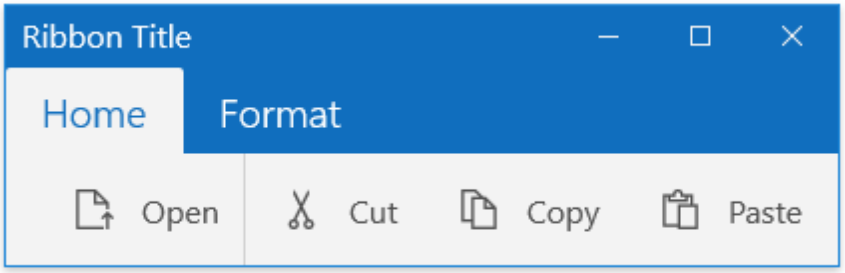
Remarks

Set the **EmbedRibbonInWindowTitle** property to **true** to display the current RibbonControl instead of the window's title bar.

The following image demonstrates the effect of the **EmbedRibbonInWindowTitle** property.



EmbedRibbonInWindowTitle = "false"



EmbedRibbonInWindowTitle = "true"

HelpPane Property

Gets or sets an object that represents a ribbon help pane. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property HelpPane As HelpPane
```

C#

```
public HelpPane HelpPane { get; set; }
```

Property Value

A HelpPane object.

Remarks

Use the **HelpPane** property to configure the ribbon help pane. The help pane usually contains a single button that opens the help window.

Tip

See Help Pane to learn more.

The following example demonstrates a simple help pane that contains the **Undo** and **Redo** buttons.

Xaml

```
<Ribbon:RibbonControl>
    <Ribbon:RibbonControl.HelpPane>
        <Ribbon:HelpPane>
            <Ribbon:HelpPaneButton>
                <Ribbon:HelpPaneButton.Icon>
                    <SymbolIcon Symbol="Undo"/>
                </Ribbon:HelpPaneButton.Icon>
            </Ribbon:HelpPaneButton>
            <Ribbon:HelpPaneButton>
                <Ribbon:HelpPaneButton.Icon>
                    <SymbolIcon Symbol="Redo"/>
                </Ribbon:HelpPaneButton.Icon>
            </Ribbon:HelpPaneButton>
        </Ribbon:HelpPane>
    </Ribbon:RibbonControl.HelpPane>
    <Ribbon:RibbonTab Caption="Home" >
        <Ribbon:RibbonGroup Caption="File">
            <Ribbon:RibbonButton Content="Open" IconWidth="32" IconHeight="32"
            ItemStyle="GlyphWithText" >
                <Ribbon:RibbonButton.Icon>
                    <SymbolIcon Symbol="OpenFile"/>
                </Ribbon:RibbonButton.Icon>
            </Ribbon:RibbonButton>
        </Ribbon:RibbonGroup>
    </Ribbon:RibbonTab>
</Ribbon:RibbonControl>
```

IsTitleEditable Property

Gets or sets whether an end-user can edit the Title property value at runtime. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property IsTitleEditable As Boolean
```

C#

```
public bool IsTitleEditable { get; set; }
```

Property Value

true, if the Title is editable; otherwise, **false**.

SelectedTab Property

Gets or sets which of the RibbonControl tabs is currently selected. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedTab As RibbonTab
```

C#

```
public RibbonTab SelectedTab { get; set; }
```

Property Value

A RibbonTab object that is the currently selected ribbon tab.

Remarks

Use the **SelectedTab** property to obtain the currently selected ribbon tab.

To specify the selected tab programmatically, set the **SelectedTab** property to one of the Tabs collection items.

ShowTitleBar Property

Gets or sets whether the RibbonControl displays the title bar. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property ShowTitleBar As Boolean
```

C#

```
public bool ShowTitleBar { get; set; }
```

Property Value

true, to display the title bar; otherwise, **false**.

Remarks

Use the **ShowTitleBar** property to control the visibility of the RibbonControl's title bar.

Tabs Property

Gets the collection of RibbonControl tabs.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Tabs As RibbonTabCollection
```

C#

```
public RibbonTabCollection Tabs { get; }
```

Property Value

A **RibbonTabCollection** object that is the collection of RibbonControl tabs.

Remarks

Use the **Tabs** property to obtain the collection of RibbonControl tabs.

Title Property

Gets or sets the title displayed at the top of the Ribbon control.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property Title As String
```

C#

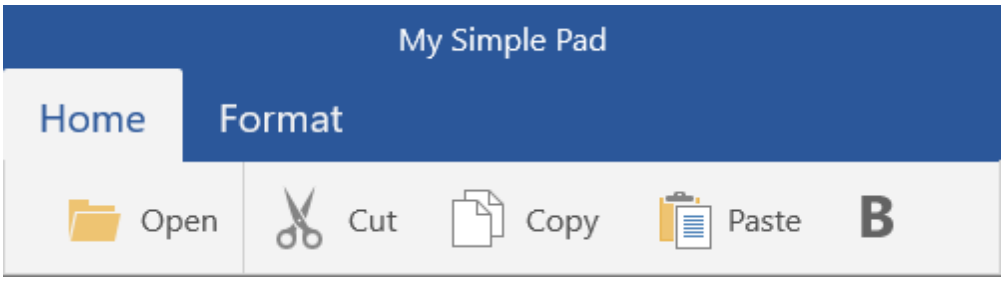
```
public string Title { get; set; }
```

Property Value

The Ribbon control's title.

Remarks

You can use the **Title** property to display custom text (e.g., a file name).



If the IsTitleEditable property is **true**, an end-user can edit the Title at runtime (the editing is initiated by a mouse click on the Title).

RibbonControlBase Members

Serves as the base class for the RibbonControl.

The following tables list the members exposed by the RibbonControlBase type.

Public Constructors

	Name	Description
	RibbonControlBase	Initializes a new instance of the RibbonControlBase class.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualSize	(Inherited from **DevExpress.UI.Xaml.Internal.ContentControlEx**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)

RibbonControlBase Constructor

Initializes a new instance of the RibbonControlBase class.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public RibbonControlBase()
```

RibbonControlBase Properties

Serves as the base class for the RibbonControl.

The following tables list the members exposed by the RibbonControlBase type.

Public Constructors

	Name	Description
	RibbonControlBase	Initializes a new instance of the RibbonControlBase class.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualSize	(Inherited from **DevExpress.UI.Xaml.Internal.ContentControlEx**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)

© 2018 Developer Express Inc.

	BorderThicknessProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CacheMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CacheModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDrag	(Inherited from **Windows.UI.Xaml.UIElement**)
	CanDragProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	ChangeRibbonStateCommand	Gets the command that changes the current state of the ribbon.
	ChangeRibbonViewModeCommand	Gets the command that changes the ribbon's view mode.
	CharacterSpacing	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	CharacterSpacingProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	Clip	(Inherited from **Windows.UI.Xaml.UIElement**)
	ClipProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeMode	(Inherited from **Windows.UI.Xaml.UIElement**)
	CompositeModeProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Content	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplate	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateRoot	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateSelector	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTemplateSelectorProperty	(Inherited from **Windows.UI.Xaml.Controls.Content**

© 2018 Developer Express Inc.

		Control)
	ContentTransitions	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContentTransitionsProperty	(Inherited from **Windows.UI.Xaml.Controls.ContentControl**)
	ContextualHeaderItemContainerStyle	
	ContextualHeaderItemTemplate	Gets or sets a template that specifies the appearance of contextual tab item headers. This is a dependency property.
	DataContext	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DataContextProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DefaultStyleKeyProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	DesiredSize	(Inherited from **Windows.UI.Xaml.UIElement**)
	Dispatcher	(Inherited from **Windows.UI.Xaml.DependencyObject**)
	DoubleTappedEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnterEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeaveEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOverEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropEvent	(Inherited from **Windows.UI.Xaml.UIElement**)
	FlowDirection	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FlowDirectionProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	FocusState	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	FocusStateProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)

ChangeRibbonStateCommand Property

Gets the command that changes the current state of the ribbon.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ChangeRibbonStateCommand As ICommand
```

C#

```
public ICommand ChangeRibbonStateCommand { get; }
```

Property Value

An object implementing the Windows.UI.Xaml.Input.ICommand interface.

Remarks

The **ChangeRibbonStateCommand** command accepts a RibbonState enumeration value as the parameter.

ChangeRibbonViewModeCommand Property

Gets the command that changes the ribbon's view mode.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property ChangeRibbonViewModeCommand As ICommand
```

C#

```
public ICommand ChangeRibbonViewModeCommand { get; }
```

Property Value

An object implementing the Windows.UI.Xaml.Input.ICommand interface.

Remarks

The **ChangeRibbonViewModeCommand** command accepts a RibbonViewMode enumeration value as the parameter.

ContextualHeaderItemContainerStyle Property

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public Property ContextualHeaderItemContainerStyle As Style
```
C#
```
public Style ContextualHeaderItemContainerStyle { get; set; }
```

Property Value

ContextualHeaderItemTemplate Property

Gets or sets a template that specifies the appearance of contextual tab item headers. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property ContextualHeaderItemTemplate As DataTemplate
```

C#

```
public DataTemplate ContextualHeaderItemTemplate { get; set; }
```

Property Value

A DataTemplate object that represents the header template of contextual ribbon tabs.

Remarks

Use the **ContextualHeaderItemTemplate** property to specify the appearance of contextual tab item headers.

The binding source for the **ContextualHeaderItemTemplate** template is represented by the **HeaderContainerViewModel** object.

The following example demonstrates a tab header that contains a white border.

Xaml

```
<Ribbon:RibbonControl.ContextualHeaderItemTemplate>
    <DataTemplate>
        <Border BorderBrush="White" BorderThickness="3">
            <TextBlock Text="{Binding Container.Caption}" Margin="5" />
        </Border>
    </DataTemplate>
</Ribbon:RibbonControl.ContextualHeaderItemTemplate>
```

HeaderItemContainerStyle Property

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public Property HeaderItemContainerStyle As Style
```
C#
```
public Style HeaderItemContainerStyle { get; set; }
```

Property Value

HeaderItemTemplate Property

Gets or sets a template that defines the presentation of ribbon tab headers. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property HeaderItemTemplate As DataTemplate
```

C#

```
public DataTemplate HeaderItemTemplate { get; set; }
```

Property Value

A DataTemplate object that represents the ribbon tab header template.

Remarks

Use the **HeaderItemTemplate** property to specify the appearance of tab item headers.

The binding source for the **HeaderItemTemplate** template is represented by the **HeaderContainerViewModel** object.

The following example demonstrates a tab header that contains a white border.

Xaml

```
<Ribbon:RibbonControl.HeaderItemTemplate>
    <DataTemplate>
        <Border BorderBrush="White" BorderThickness="3">
            <TextBlock Text="{Binding Container.Caption}" Margin="5" />
        </Border>
    </DataTemplate>
</Ribbon:RibbonControl.HeaderItemTemplate>
```

SelectedTabCaption Property

Gets or sets the caption of the tab that is currently selected. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedTabCaption As String
```

C#

```
public string SelectedTabCaption { get; set; }
```

Property Value

An string value that is the caption of the selected tab.

State Property

Gets or sets whether a ribbon is collapsed. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property State As RibbonState
```

C#

```
public RibbonState State { get; set; }
```

Property Value

A RibbonState enumeration value that specifies the ribbon's expansion state.

Remarks

Use the **State** property to control the ribbon's expansion state.

TabsSource Property

Gets or sets the source of tabs with which this RibbonControlBase should be populated. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property TabsSource As Object
```

C#

```
public object TabsSource { get; set; }
```

Property Value

An object that stores ribbon tabs.

TabTemplate Property

Gets or sets a template that defines the presentation of ribbon tabs. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property TabTemplate As DataTemplate
```

C#

```
public DataTemplate TabTemplate { get; set; }
```

Property Value

A DataTemplate object that represents the ribbon tab template.

See Also

RibbonControlBase Class
RibbonControlBase Members
DevExpress.UI.Xaml.Ribbon Namespace

TabTemplateSelector Property

Gets or sets an object that chooses a ribbon tab template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property TabTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector TabTemplateSelector { get; set; }
```

Property Value

A DataTemplateSelector descendant that chooses a template based on custom logic.

See Also

RibbonControlBase Class
RibbonControlBase Members
DevExpress.UI.Xaml.Ribbon Namespace

ViewMode Property

Gets or sets whether or not the auto-hide functionality is enabled. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property ViewMode As RibbonViewMode
```

C#

```
public RibbonViewMode ViewMode { get; set; }
```

Property Value

A RibbonViewMode enumeration value that specifies whether or not the auto-hide functionality is enabled.

Remarks

To enable the auto-hide functionality, set the **ViewMode** property to RibbonViewMode.AutoHide. In auto-hide mode, the ribbon is automatically collapsed (with only its title visible) when it loses focus. The collapsed state is indicated by the ellipsis character at the right side of the ribbon control. To expand a collapsed ribbon, an end-user must click its title.

The following image demonstrates a collapsed ribbon.

To control the ribbon's expansion state

in code, use the State property to control the ribbon's expansion state.

RibbonControlBase Events

Serves as the base class for the RibbonControl.

The following tables list the members exposed by the RibbonControlBase type.

Public Events

	Name	Description
	DataContextChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	DoubleTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragEnter	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragLeave	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragOver	(Inherited from **Windows.UI.Xaml.UIElement**)
	DragStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	Drop	(Inherited from **Windows.UI.Xaml.UIElement**)
	DropCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)
	GotFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	Holding	(Inherited from **Windows.UI.Xaml.UIElement**)
	IsEnabledChanged	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	KeyDown	(Inherited from **Windows.UI.Xaml.UIElement**)
	KeyUp	(Inherited from **Windows.UI.Xaml.UIElement**)
	LayoutUpdated	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Loading	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	LostFocus	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationCompleted	(Inherited from **Windows.UI.Xaml.UIElement**)

© 2018 Developer Express Inc.

	ManipulationDelta	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationInertiaStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarted	(Inherited from **Windows.UI.Xaml.UIElement**)
	ManipulationStarting	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCanceled	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerCaptureLost	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerEntered	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerExited	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerMoved	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerPressed	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerReleased	(Inherited from **Windows.UI.Xaml.UIElement**)
	PointerWheelChanged	(Inherited from **Windows.UI.Xaml.UIElement**)
	RightTapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	SelectedTabChanged	Fires after the currently selected tab item has been changed.
	SizeChanged	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	Tapped	(Inherited from **Windows.UI.Xaml.UIElement**)
	Unloaded	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

SelectedTabChanged Event

Fires after the currently selected tab item has been changed.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
event Public SelectedTabChanged As EventHandler(of SelectedTabPropertyChangedEventArgs)
```

C#

```
public event EventHandler<SelectedTabPropertyChangedEventArgs> SelectedTabChanged
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Ribbon.SelectedTabPropertyChangedEventArgs containing data related to this event.

Remarks

The event's **oldValue** and **newValue** properties return the old and new selected tab items correspondingly.

To select tab items via code, use the RibbonControl.SelectedTab or SelectedTabCaption properties.

RibbonGroup Class

Represents a ribbon group.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Class RibbonGroup Inherits RibbonGroupBase
```

C#

```
public class RibbonGroup : RibbonGroupBase
```

Remarks

The **RibbonGroup** objects are used to organize the RibbonTab content.

To learn more, see Tabs and Groups.

Items Property

Provides access to the collection of items within the group.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Items As RibbonItemCollection
```

C#

```
public RibbonItemCollection Items { get; }
```

Property Value

A collection of ribbon items.

Remarks

The Ribbon And Toolbar Items document describes available ribbon items.

RibbonState Enumeration

Lists values that specify the current ribbon state.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public Enum RibbonState
```
C#
```
public enum RibbonState
```

Members

Name	Description
Footer	
Hidden	
Minimized	
Normal	

Remarks

Values listed by this enumeration are used to set the RibbonControlBase.State property.

RibbonTab Class

Represents a ribbon tab.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Class RibbonTab Inherits RibbonTabBase
```

C#

```
public class RibbonTab : RibbonTabBase
```

Remarks

RibbonTab objects are used to organize the contents of the RibbonControl.

To learn more, see Tabs and Groups.

RibbonTab Members

Represents a ribbon tab.

The following tables list the members exposed by the RibbonTab type.

Public Constructors

	Name	Description
	RibbonTab	Initializes a new instance of the RibbonTab class.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

RibbonTab Constructor

Initializes a new instance of the RibbonTab class.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public RibbonTab()
```

RibbonTab Properties

Represents a ribbon tab.

The following tables list the members exposed by the RibbonTab type.

Public Constructors

	Name	Description
	RibbonTab	Initializes a new instance of the RibbonTab class.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualSize	(Inherited from **DevExpress.UI.Xaml.Internal.ControlEx**)
	ActualWidth	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualWidthProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	AllowDrop	(Inherited from **Windows.UI.Xaml.UIElement**)
	AllowDropProperty	(Inherited from **Windows.UI.Xaml.UIElement**)
	Background	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BackgroundProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BaseUri	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	BorderBrush	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderBrushProperty	(Inherited from **Windows.UI.Xaml.Controls.Control**)
	BorderThickness	(Inherited from **Windows.UI.Xaml.Controls.Control**)

Groups Property

Gets the collection of groups displayed by the current tab.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Groups As RibbonGroupCollection
```

C#

```
public RibbonGroupCollection Groups { get; }
```

Property Value

A collection of ribbon groups.

Remarks

Groups are represented by RibbonGroup objects.

RibbonTabBase Constructor

Initializes a new instance of the RibbonTabBase class with default settings.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public RibbonTabBase()
```

RibbonTabBase Properties

Serves as the base for classes that represent ribbon tabs.

The following tables list the members exposed by the RibbonTabBase type.

Public Constructors

	Name	Description
	RibbonTabBase	Initializes a new instance of the RibbonTabBase class with default settings.

Public Properties

	Name	Description
	ActualHeight	(Inherited from **Windows.UI.Xaml.FrameworkElement**)
	ActualHeightProperty	(Inherited from **Windows.UI.Xaml.FrameworkElement**)

GroupsSource Property

Gets or sets the source of groups with which this RibbonTabBase should be populated. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupsSource As Object
```

C#

```
public object GroupsSource { get; set; }
```

Property Value

An object that stores ribbon groups.

© 2018 Developer Express Inc.

GroupTemplate Property

Gets or sets a template that specifies the appearance of groups located within the current tab. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupTemplate As DataTemplate
```

C#

```
public DataTemplate GroupTemplate { get; set; }
```

Property Value

A DataTemplate object that represents the ribbon group template.

Remarks

Use the **GroupTemplate** property to control the appearance of groups located within the current ribbon tab.

The GroupTemplateSelector property allows you to implement custom logic to choose the required template.

GroupTemplateSelector Property

Gets or sets an object that chooses a ribbon group template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector GroupTemplateSelector { get; set; }
```

Property Value

A DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

A template that defines the presentation of toolbar groups is specified by the GroupTemplate property. If you have more than one template that can be used to render groups, you can implement custom logic to choose the required template. To do this, derive from the Windows.UI.Xaml.Controls.DataTemplateSelector class, implement the **SelectTemplateCore** methods that return a template which meets the required condition, and assign it to the **GroupTemplateSelector** property.

If both the GroupTemplate and **GroupTemplateSelector** are specified, a group is rendered using the template returned by the template selector. If the template selector returns **null**, the template specified by the GroupTemplate property is used.

IsSelected Property

Gets or sets whether the current ribbon tab is selected. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property IsSelected As Boolean
```

C#

```
public bool IsSelected { get; set; }
```

Property Value

true, if the current ribbon tab is selected; otherwise, **false**.

Remarks

To programmatically select a ribbon tab, set the **IsSelected** property to **true**.

RibbonToolbarControl Class

The Ribbon Toolbar control.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Class RibbonToolbarControl Inherits RibbonControlBase
```

C#

```
public class RibbonToolbarControl : RibbonControlBase
```

Remarks

The Ribbon Toolbar Control provides capabilities a similar to the Ribbon Control to organize your application menus by grouping your commands into separate tabs and groups. This control provides lighter layout and in comparison to the Ribbon Control, does not contain a title, root application menu, and contextual tabs.

HelpPane Property

Gets or sets an object that represents a ribbon help pane. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property HelpPane As ToolbarHelpPane
```

C#

```
public ToolbarHelpPane HelpPane { get; set; }
```

Property Value

A DevExpress.UI.Xaml.Ribbon.ToolbarHelpPane object.

Remarks

Use the **HelpPane** property to configure the ribbon help pane. The help pane usually contains a single button that opens the help window.

Tip

See Help Pane to learn more.

The following example demonstrates a simple help pane that contains the **Undo** and **Redo** buttons.

Xaml

```
        <Ribbon:RibbonToolbarControl>
            <Ribbon:RibbonToolbarControl.HelpPane>
                <Ribbon:ToolbarHelpPane>
                    <Ribbon:ToolbarHelpPaneButton>
                        <Ribbon:ToolbarHelpPaneButton.Icon>
                            <SymbolIcon Symbol="Undo"/>
                        </Ribbon:ToolbarHelpPaneButton.Icon>
                    </Ribbon:ToolbarHelpPaneButton>
                    <Ribbon:ToolbarHelpPaneButton>
                        <Ribbon:ToolbarHelpPaneButton.Icon>
                            <SymbolIcon Symbol="Redo"/>
                        </Ribbon:ToolbarHelpPaneButton.Icon>
                    </Ribbon:ToolbarHelpPaneButton>
                </Ribbon:ToolbarHelpPane>
            </Ribbon:RibbonToolbarControl.HelpPane>
            <Ribbon:RibbonToolbarTab Caption="Home" >
                <Ribbon:RibbonToolbarGroup Caption="File">
                    <Ribbon:RibbonToolbarButton Content="Open" IconWidth="32" IconHeight="32"
                                                ItemStyle="GlyphWithText">
                        <Ribbon:RibbonToolbarButton.Icon>
                            <SymbolIcon Symbol="OpenFile"/>
                        </Ribbon:RibbonToolbarButton.Icon>
                    </Ribbon:RibbonToolbarButton>
                </Ribbon:RibbonToolbarGroup>
            </Ribbon:RibbonToolbarTab>
        </Ribbon:RibbonToolbarControl>
```

The following image demonstrates the result.

HotItems Property

Provides access to the collection of hot items within the RibbonToolbarControl.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property HotItems As RibbonToolbarItemCollection
```

C#

```
public RibbonToolbarItemCollection HotItems { get; }
```

Property Value

A collection of ribbon toolbar items.

Remarks

Hot items are only available when the application is running on a mobile device. End-users can invoke these items by clicking the ellipsis [ ] button. See the illustration below.

HotItemsColumnsCount Property

Gets or sets the number of columns in which hot items are arranged. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property HotItemsColumnsCount As Integer
```

C#

```
public int HotItemsColumnsCount { get; set; }
```

Property Value

An integer value that specifies the number of columns in which hot items are arranged.

Remarks

The HotItems property provides access to the collection of hot items.

SelectedTab Property

Gets or sets which of the RibbonToolbarControl tabs is currently selected. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property SelectedTab As RibbonToolbarTab
```

C#

```
public RibbonToolbarTab SelectedTab { get; set; }
```

Property Value

A **RibbonToolbarTab** object that is the currently selected ribbon tab.

Remarks

Use the **SelectedTab** property to obtain the currently selected ribbon tab.

To specify the selected tab programmatically, set the **SelectedTab** property to one of the Tabs collection items.

Tabs Property

Gets the collection of RibbonToolbarControl tabs.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Tabs As RibbonToolbarTabCollection
```

C#

```
public RibbonToolbarTabCollection Tabs { get; }
```

Property Value

A **RibbonToolbarTabCollection** object that is the collection of RibbonToolbarControl tabs.

Remarks

To learn more, see Tabs and Groups.

RibbonViewMode Enumeration

Lists values that specify the RibbonControl's view mode.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Enum RibbonViewMode
```

C#

```
public enum RibbonViewMode
```

Members

Name	Description
AutoHide	The ribbon is automatically collapsed when it loses focus.
Normal	The ribbon is always displayed.

Remarks

The values listed by this enumeration are used to set the RibbonControlBase.ViewMode property's value.

ToolbarControl Constructor

Initializes a new instance of the ToolbarControl class.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public ToolbarControl()
```

ToolbarControl Properties

A lightweight one-tab toolbar control.

The following tables list the members exposed by the ToolbarControl type.

Public Constructors

	Name	Description
	ToolbarControl	Initializes a new instance of the ToolbarControl class.

Groups Property

Gets the collection of groups displayed by the toolbar control.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Groups As ToolbarGroupCollection
```

C#

```
public ToolbarGroupCollection Groups { get; }
```

Property Value

A collection of toolbar groups.

Remarks

Groups are represented by ToolbarGroup objects.

GroupsSource Property

Gets or sets the source of groups with which this ToolbarControl should be populated. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupsSource As Object
```

C#

```
public object GroupsSource { get; set; }
```

Property Value

An object that stores toolbar groups.

GroupTemplate Property

Gets or sets a template that specifies the appearance of groups located within the toolbar control. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupTemplate As DataTemplate
```

C#

```
public DataTemplate GroupTemplate { get; set; }
```

Property Value

A DataTemplate object that represents the toolbar group template.

Remarks

Use the **GroupTemplate** property to control the appearance of groups located within the toolbar control.

The GroupTemplateSelector property allows you to implement custom logic to choose the required template.

GroupTemplateSelector Property

Gets or sets an object that chooses a toolbar group template based on custom logic. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property GroupTemplateSelector As DataTemplateSelector
```

C#

```
public DataTemplateSelector GroupTemplateSelector { get; set; }
```

Property Value

A DataTemplateSelector descendant that chooses a template based on custom logic.

Remarks

A template that defines the presentation of toolbar groups is specified by the GroupTemplate property. If you have more than one template that can be used to render groups, you can implement custom logic to choose the required template. To do this, derive from the Windows.UI.Xaml.Controls.DataTemplateSelector class, implement the **SelectTemplateCore** methods that return a template which meets the required condition, and assign it to the **GroupTemplateSelector** property.

If both the GroupTemplate and **GroupTemplateSelector** are specified, a group is rendered using the template returned by the template selector. If the template selector returns **null**, the template specified by the GroupTemplate property is used.

Orientation Property

Gets or sets whether the items in the ToolbarControl are arranged horizontally or vertically. This is a dependency property.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Property Orientation As Orientation
```

C#

```
public Orientation Orientation { get; set; }
```

Property Value

A Windows.UI.Xaml.Controls.Orientation enumeration value that specifies whether the items in the ToolbarControl are arranged horizontally or vertically. The default is **Horizontal**.

Placeholder Property

This property supports the internal infrastructure and is not intended to be used directly from your code.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public ReadOnly Property Placeholder As UIElement
```
C#
```
public UIElement Placeholder { get; }
```

ToolbarGroup Class

Represents a toolbar group.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public Class ToolbarGroup Inherits RibbonGroupBase
```

C#

```
public class ToolbarGroup : RibbonGroupBase
```

ToolbarGroup Members

Represents a toolbar group.

The following tables list the members exposed by the ToolbarGroup type.

Public Constructors

	Name	Description
	ToolbarGroup	Initializes a new instance of the ToolbarGroup class.

Public Properties

	Name	Description

ToolbarGroup Constructor

Initializes a new instance of the ToolbarGroup class.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
Public New()
```
C#
```
public ToolbarGroup()
```

Items Property

Provides access to the collection of items within the group.

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax

Visual Basic

```
Public ReadOnly Property Items As ToolbarItemCollection
```

C#

```
public ToolbarItemCollection Items { get; }
```

Property Value

A collection of toolbar items.

Remarks

The Ribbon And Toolbar Items document describes available ribbon items.

FlyoutStateChanged Event

Namespace: DevExpress.UI.Xaml.Ribbon
Assembly: DevExpress.UI.Xaml.Ribbon.v18.1.dll

Syntax
Visual Basic
```
event Public FlyoutStateChanged As EventHandler(of ToolbarFlyoutStateChangedEventArgs)
```
C#
```
public event EventHandler<ToolbarFlyoutStateChangedEventArgs> FlyoutStateChanged
```

Event Data

The event handler receives an argument of type DevExpress.UI.Xaml.Ribbon.Internal.ToolbarFlyoutStateChangedEventArgs containing data related to this event.

DevExpress.Utils

Contains utility classes used by DevExpress controls and components.

Enumerations

	Enumeration	Description
	DefaultBoolean	Lists values which specify the validity of a condition (indicates whether the condition is true or false).

© 2018 Developer Express Inc.

DefaultBoolean Enumeration

Lists values which specify the validity of a condition (indicates whether the condition is true or false).

Namespace: DevExpress.Utils
Assembly: DevExpress.Core.v18.1.dll

Syntax
Visual Basic
```
Public Enum DefaultBoolean
```
C#
```
public enum DefaultBoolean
```

Members

Name	Description
Default	The value is determined by a control's current setting. The default value is automatically set for a control if an end-user doesn't specify a value.
False	Corresponds to a Boolean value of **false**.
True	Corresponds to a Boolean value of **true**.

DevExpress.XtraGrid

Contains classes for working with data in grid controls.

Enumerations

	Enumeration	Description
	ColumnSortMode	Lists the values that specify how a column's data should be sorted.

© 2018 Developer Express Inc.

ColumnSortMode Enumeration

Lists the values that specify how a column's data should be sorted.

Namespace: DevExpress.XtraGrid
Assembly: DevExpress.Core.v18.1.dll

Syntax
Visual Basic
```
Public Enum ColumnSortMode
```
C#
```
public enum ColumnSortMode
```

Members

Name	Description
Custom	Enables custom sorting of a column's data. To implement custom sorting, handle the GridControl.CustomColumnSort event. The **Custom** mode also enables custom grouping of rows when grouping is applied against the current column. To implement custom grouping, handle the GridControl.CustomColumnGroup event.
Default	Sorts the column's data according to the type of the editor assigned to the column.
DisplayText	Sorts the column's data by the column's display text (the strings displayed within the column's cells).
Value	Sorts the column's data by the column's edit values (these are synchronized with the bound data source's values).

Remarks

Use the following properties to specify how a column's data is sorted. When sorting is applied to columns in the GridControl, use the ColumnBase.SortMode property.
